Douglas,Sean Markey,Sarah Minnes,Bill Reimer,2019-07-04 Canadian regional development today involves multiple actors operating within nested scales from local to national and even international levels Recent approaches to making sense of this complexity have drawn on concepts such as multi level governance relational assets integration innovation and learning regions These new regionalist concepts have become increasingly global in their formation and application yet there has been little critical analysis of Canadian regional development policies and programs or the theories and concepts upon which many contemporary regional development strategies are implicitly based This volume offers the results of five years of cutting edge empirical and theoretical analysis of changes in Canadian regional development and the potential of new approaches for improving the well being of Canadian communities and regions with an emphasis on rural regions It situates the Canadian approach within comparative experiences and debates offering the opportunity for broader lessons to be learnt This book will be of interest to policy makers and practitioners across Canada and in other jurisdictions where lessons from the Canadian experience may be applicable At the same time the volume contributes to and updates regional development theories and concepts that are taught in our universities and colleges and upon which future research and analysis will build **Asian Regionalism in the**

It places particular emphasis on its socio economic and socio political determinants which accompany the problem of existing and ever widening differences in the level of regional development in various parts of Europe. In order to diagnose the scale of those differences and to indicate the main forces behind the divergence of development the authors propose an original systematisation of regional development factors drawing attention to the need to consider them within the framework of present day socio economic megatrends. The proposed approach to the development factors is also used for the author's operationalisation of the concept of territorial capital which is at the centre of regional place based policy. The wide spatial aspect of the analysis national and local and its extensive temporal scope 2004 2019 yields unique results and creates an important element of added value for this book which shows the regularities of the process of regional development in Europe at three spatial levels pan European national and intra regional. Furthermore it indicates the challenges faced by regionalists who attempt to carry out research on different territorial levels with a diverse number of units 205 EU regions 16 Polish voivodeships 2 478 Polish local units and extended observation periods 2004 2017. The solutions proposed by the authors who show the potential of overcoming the barriers resulting from limited access to complete and comparable statistical data series should be inspiring for many researchers. The unique results of direct research carried out on a large sample of respondents and entrepreneurs via diverse field research techniques constitute a valuable source of information on local conditions that impact contemporary development processes in less developed regions. Their value is even greater because they were carried out in a unique laboratory created by the authors for testing the regularity of formation and impact of socio economic development factors in various locally determined conditions of this process. It consists of purposefully selected test units LAU2. Located in a less developed region they represent all growth types and functional test units identified in the course of the research. Consequently the results obtained may be generalised and applied to other areas showing similar features of territorial capital. The monograph is addressed primarily to a wide group of regionalists connected with economic and social sciences as well as to practitioners involved in the implementation of development policies at various levels.

**The Operation of Internal Labor Markets** Lawrence T. Pinfield, 2013-11-22 Employment systems consist of complex arrays of formal and informal rules that structure the relationships between employees and employers. There are many different types of employment systems. Some are specified in considerable detail in collectively bargained quasilegal employment contracts while others are left to discretion. This book describes the latter type of employment system one in which there is an active market for knowledge and skills. This is the salaried employment system of ForestCo a large multiplant manufacturing company in the forest products industry. Here supervisors and managers actively adjust the jobs and persons under their authority to meet the market social and institutional forces that

influence the activities and performance of their departments The study of employment systems is a relatively recent phenomenon and few prior studies or theories were found to guide this investigation Neither the scope nor the components of employment system studies are yet established The field is confused and contested Nevertheless there is related literature which can be used to focus attention on different features of employment systems One emerging body of work that holds the most promise for the study of employment systems is internal labor market ILM theory *Global, Regional and Local Perspectives on the Economies of Southeastern Europe* Alexandra Horobet, Lucian Belascu, Persefoni Polychronidou, Anastasios Karasavoglou, 2020-12-12 This book includes papers presented at the 11th International Conference Economies of the Balkan and Eastern European Countries EBEEC held in Bucharest Romania in May 2019 It sheds new light on the micro and macroeconomic developments in the Eastern European and Balkan countries while at the same time taking into account the broader regional and global factors influencing these developments By examining how the decisions and the performance of economic social and political actors in the region are intertwined with wider regional and global events the contributions highlight the dynamic development in Eastern Europe and the Balkans region Further the book demonstrates how the region has overcome numerous challenges in the past and is evolving within the framework of European economic integration and the global effervescent economy Spatial Analysis and Location Modeling in Urban and Regional Systems Jean-Claude Thill, 2017-11-30 This contributed volume collects cutting edge research in Geographic Information Science Technologies Location Modeling and Spatial Analysis of Urban and Regional Systems The contributions emphasize methodological innovations or substantive breakthroughs on many facets of the socio economic and environmental reality of urban and regional contexts **Regions and Development** Sheila Page, 2000 At the 1996 EADI Conference the papers presented in the World Trade and Trade Policy workshop looked at the new trends in regionalism from a variety of points of view for different institutions They considered the effects of regions their implications for policy and performance in the developing countries and for international economic institutions and tried to interpret them in terms of economic and political theory **Growth, Trade, and Integration in Latin America** Weine Karlsson, Akhil Maliki, 1996 Evaluations of recent economic reforms and integration efforts in the region Emphasizes success of outward oriented policies and regional cooperation schemes such as Mercosur and NAFTA Handbook of Latin American Studies v 57
