Interactions Between China's National Emissions Trading Scheme and Electricity Market: Practices and Policies Tsun Se Cheong, Xunpeng (Roc) Shi, Yongping Sun, Jian Yu, Xin Yao, 2023-11-03. China's national carbon market, the world's largest emissions trading scheme (ETS), kicked off its first online trade recently. This can be called a milestone for the country towards the nation's goals of having CO2 emissions peak before 2030 and achieving carbon neutrality by 2060. China's national ETS initially covers the power sector before being expanded to a much broader set of energy intensive industries. On one hand, the electricity sector, the largest carbon emitting industry, is responsible for about 40% of China's emissions and it has great significance to response to global climate change. On the other hand, the effectiveness of China's ETS will rest on how well it is coordinated with power market regulations and policies. In this regard, the deepening of reform as well as the advanced technology and its applications in the electricity market will add new challenges and opportunities to electricity trade, which in turn influences national ETS. Therefore, this brings urgency to accurately capture the dynamic interactions between national ETS and electricity market to transform carbon trading into a practical and effective way to decarbonize the power sector. **The Russian Armed Forces at the Dawn of the Millennium**, 2000. This anthology is an outgrowth of a

conference titled *The Russian Armed Forces at the Dawn of the Millennium* held at the Collins Center of the Army War College's Center for Strategic Leadership from 7 through 9 February 2000. The genesis for the conference was the realization by several members of the staff of the Collins Center and Army War College faculty that the U.S.-led NATO operation in Kosovo resulted in a significant shift of Russian views on the United States and NATO. The conference also complemented our general objective of examining the changing environment in which the United States, including its armed forces, finds itself. The conference brought together over 50 individuals from academia and the policy and intelligence communities to examine the current state of the Russian military. Focusing primarily on the socio-political dimension of the military but not ignoring the military technical dimension, the presentations delivered during the conference looked at Russia's domestic environment.
