Regularity Results For Nonlinear Elliptic Systems And Applications:

Regularity Results for Nonlinear Elliptic Systems and Applications Alain Bensoussan, Jens Frehse, 2013-04-17 The book collects many techniques that are helpful in obtaining regularity results for solutions of nonlinear systems of partial differential equations. They are then applied in various cases to provide useful examples and relevant results particularly in fields like fluid mechanics, solid mechanics, semiconductor theory or game theory. In general, these techniques are scattered in the journal literature and developed in the strict context of a given model. In the book, they are presented independently of specific models so that the main ideas are explained while remaining applicable to various situations. Such a presentation will facilitate application and implementation by researchers as well as teaching to students.

Aspects of Inelastic Media B. Daya Reddy, 2008-09-24 This work comprises papers based on some of the talks presented at the IUTAM Symposium of the same name held in Cape Town January 14-18, 2008. This volume treats cutting edge issues in modelling the behaviour of various classes of inelastic media and associated algorithms for carrying out computational simulations. A key feature of the contributions are works directed at modelling behaviour at the meso and micro scales and at bridging the micro-macro scales.

Numerical Methods for Nonlinear Elliptic Differential Equations Klaus Böhmer, 2010-10-07 Boehmer systematically handles the different numerical methods for nonlinear elliptic problems.

Princeton University Press is proud to have published the Annals of Mathematics Studies since 1940. One of the oldest and most respected series in science publishing, it has included many of the most important and influential mathematical works of the twentieth century. The series continues this tradition as Princeton University Press publishes the major works of the twenty-first century. To mark the continued success of the series, all books are available in paperback and as ebooks.

Nonlinear Partial Differential Equations with Applications Tomáš Roubíček, 2006-01-17 This book primarily concerns quasilinear and semilinear elliptic and parabolic partial differential equations, inequalities, and systems. The exposition quickly leads from general theory to analysis of concrete equations which have specific applications in such areas as electrically semi-conductive media, modeling of biological systems, and mechanical engineering. Methods of Galerkin or of Rothe are exposed in a large generality.

Nonlinear Partial Differential Equations with Applications Tomáš Roubíček, 2013-01-13 This book primarily concerns quasilinear and semilinear elliptic and parabolic partial differential equations, inequalities, and systems. The exposition leads the reader through the general theory based on abstract pseudo-monotone or accretive operators as fast as possible towards the analysis of concrete differential equations.

which have specific applications in continuum thermo mechanics of solids and fluids electrically semi conductive media modelling of biological systems or in mechanical engineering Selected parts are mainly an introduction into the subject while some others form an advanced textbook The second edition simplifies and extends the exposition at particular spots and augments the applications especially towards thermally coupled systems magnetism and more The intended audience is graduate and PhD students as well as researchers in the theory of partial differential equations or in mathematical modelling of distributed parameter systems The monograph contains a wealth of material in both the abstract theory of steady state or evolution equations of monotone and accretive type and concrete applications to nonlinear partial differential equations from mathematical modeling The organization of the material is well done and the presentation although concise is clear elegant and rigorous this book is a notable addition to the existing literature Also it certainly will prove useful to engineers physicists biologists and other scientists interested in the analysis of nonlinear differential models of the real world Mathematical Reviews

The Regularity of General Parabolic Systems with Degenerate Diffusion Verena Bögelein,Frank Duzaar,Giuseppe

Mingione,2013-01-28 The aim of the paper is twofold On one hand the authors want to present a new technique called p
caloric approximation which is a proper generalization of the classical compactness methods first developed by DeGiorgi with
his Harmonic Approximation Lemma This last result initially introduced in the setting of Geometric Measure Theory to prove
the regularity of minimal surfaces is nowadays a classical tool to prove linearization and regularity results for vectorial
problems Here the authors develop a very far reaching version of this general principle devised to linearize general
degenerate parabolic systems The use of this result in turn allows the authors to achieve the subsequent and main aim of the
paper that is the implementation of a partial regularity theory for parabolic systems with degenerate diffusion of the type
 $\partial_t u + \operatorname{div} (A Du) = 0$ without necessarily assuming a quasi diagonal structure i e a structure prescribing that the
gradient nonlinearities depend only on the the explicit scalar quantity

**Partial Regularity for Harmonic Maps and
Related Problems**

Roger Moser,2005 The book presents a collection of results pertaining to the partial regularity of
solutions to various variational problems all of which are connected to the Dirichlet energy of maps between Riemannian
manifolds and thus related to the harmonic map problem The topics covered include harmonic maps and generalized
harmonic maps certain perturbed versions of the harmonic map equation the harmonic map heat flow and the Landau
Lifshitz or Landau Lifshitz Gilbert equation Since the methods in regularity theory of harmonic maps are quite subtle it is not
immediately clear how they can be applied to certain problems that arise in applications The book discusses in particular this
question

Trends in Partial Differential Equations of Mathematical Physics José F. Rodrigues,Gregory Seregin,José M.
Urbano,2006-03-30 This book consists of contributions originating from a conference in Obedo Portugal which honored the
70th birthday of V A Solonnikov A broad variety of topics centering on nonlinear problems is presented particularly Navier
Stokes equations viscosity problems diffusion absorption equations free boundaries and Euler equations
