*Regulation of Gene Expression in the Nervous System* Anna Maria Giuffrida Stella, Jean de Vellis, J. Regino Perez-Polo, 1990-07-19 Offers an up to date account of the latest research findings concerned with the regulatory mechanisms of gene expression in neuronal and glial cells under different conditions The book explores the cellular and neurobiological aspects of important phenomena of the nervous system and its role in health disease and injury Contributions from prominent scientists in the field address a variety of specific topics concerned with gene expression in the nervous system from growth hormonal and trophic factors to neural tissue reactions in injury or aging

**Gene Expression in the Central Nervous System** Albert C. H. Yu, 1995 Gene expression is an active ongoing process that maintains a functional CNS as proteins are being made on a continual basis Processes such as learning and memory nerve cell repair and regeneration and its response to stress are critically dependent on gene expression This volume highlights the role of gene expression in normal CNS function and presents many research methods at the cutting edge of neuroscience which will provide insight into therapeutic approaches through which the control of gene expression may be used in the treatment of many nervous system diseases

Immediate-Early Genes in the Central Nervous System T.R. Tölle, J. Schadrack, W. Zieglgänsberger, 2012-12-06 Immediate early genes are believed to be involved in the neuron's ability to convert short term synaptic stimulation into long lasting responses and thus contribute to the adaptive alterations involved in neuronal plasticity Cellular immediate early genes share a close structural homology with some viral oncogenes Recent advances in cellular biology have identified the activation and deactivation of immediate early genes as molecular mechanisms to control regulated and deregulated growth cellular differentiation and development In this view immediate early genes may function as third messengers in a stimulus transcription cascade transferring extracellular information into changes in target gene transcription thereby changing the phenotype of neurons Immediate Early Genes in the Central Nervous System provides a comprehensive up to date overview of current methodology in the research of immediate early genes and includes a wide range of neurobiological topics such as regeneration memory formation epilepsy and nociception The contributors to this book have been selected from among the leading experts in their field of research T R TOLLE J SCHADRACK W ZIEGLGANSBERGER Contents Immediate early genes how immediate and why early G Evan Immediate early gene activation as a window on mechanism in the nervous system S P Hunt L A McNaughton R Jenkins and W Wisden 18 of immediate early genes during Differential expression synaptic plasticity seizures and brain injury suggests specific functions for these molecules in brain neurons M Dragunow 35
