Pate, 2020-06-15 *Theory And Control Of Dynamical Systems: Applications To Systems In Biology* Stig I Andersson, Ake E Andersson, Ulf Ottoson, 1992-05-26 For the mathematical modeling of complex system behavior dynamical systems play an increasing role The flexibility and very rich phenomenology exhibited by such systems make them indispensable in this context Control theory for dynamical systems is also a highly active field of research where a number of important results have been achieved recently This combined course and workshop deals with recent results regarding dynamical systems and control theory primarily in differential geometric terms as well as the applications of these fields to biological systems with an emphasis on various aspects of the immune system and on neural networks *Immunology and Epidemiology* Geoffrey W. Hoffmann, Tomas Hraba, 2013-06-29 In February 1985 a small international meeting of scientists took place at the recreation resort of the Polish Academy of Sciences in Mogilany near Cracow Poland The initiative for holding the workshop came from a working meeting on mathematical immunology and related topics at the International Institute for Applied Systems Analysis in Laxenburg Austria in November 1983 In addition to representatives of IIASA

delegates of the IIASA National Member Organizations NMO of Czechoslovakia Italy and the soviet Union took part in that working meeting The participants came to the conclusion that IIASA could play an important role in facilitating the development of research in this field The first step that they recommended to I IASA was to organize a workshop on mathematical immunology The purpose of the workshop was to review the progress that has been made in applying mathematics to problems in immunology and to explore ways in which further progress might be achieved especially by more efficient interactions between scientists working in mathematical and experimental immunology Some National Member Organizations contributed to the success of the workshop by nominat ing further participants working in this or related fields For instance thanks to a suggestion of the British NMO the meeting also included analyses of the interactions between the immune state of a population and epidemiological phenomena There were 33 participants at Mogilany from 11 countries namely Canada Czechoslovakia Federal Republic of Germany Hungary Japan Netherlands Poland Sweden united Kingdom USA and USSR

Model Development and Optimization V.V. Ivanov,2013-11-09 At present intensive development of computer hardware and software computer based methods for modeling of difficult problems have become the main technique for theoretical and applied investigations Many unsolved tasks for evolutionary systems ES are an important class of such problems ES relate to economic systems on the whole and separate branches and businesses scientific and art centers ecological systems populations separate species of animals and plants human organisms different subsystems of organisms cells of animals and plants and soon Available methods for modeling of complex systems have received considerable attention and led to significant results No large scale programs are done without methods of modeling today Power programs health programs cosmos investigations economy designs etc are a few examples of such programs Nevertheless in connection with the permanent complication of contemporary problems existing means are in need of subsequent renovation and perfection In the monograph along with analysis of contemporary means new classes of mathematical models MM which can be used for modeling in the most difficult cases are proposed and justified The main peculiarities of these MM offer possibilities for the description of ES creation and restoration processes dynamics of elimination or reservation of obsolete technology in ES dynamics of resources distribution for fulfillment of internal and external functions of ES and so on The complexity of the problems allows us to refer to the theory and applications of these MM as the mathematical theory of development For simplicity the title Model Development and Optimization was adopted
