Reinforced Concrete Design In Canada:

Reinforced Concrete Design Svetlana Brzev, John Pao, 2011-06-13 This book covers the design of main reinforced concrete structural members in accordance with the limit states design method and is based on the new CSA Standard A23.3-04 Design of Concrete Structures. The load provisions are consistent with the National Building Code of Canada 2005. The material in this book is presented in the logical order in which structural design would be performed in practice. The book takes a non-calculus based practical approach to the analysis and design of reinforced concrete members rather than a high level theoretical approach. The authors use modern analysis and design procedures that are consistent with good design practice, teaching, research, and consulting experience related to structural design and rehabilitation of concrete and masonry structures including buildings, municipal and industrial facilities. John Pao, M.Eng, P.Eng, Struct. Eng., is the President of Bogdonov Pao Associates Ltd. of Vancouver, BC, and BPA Group of Companies with offices in Seattle and Los Angeles. Mr. Pao has extensive consulting experience related to design of reinforced concrete buildings including high-rise residential and office buildings, shopping centers, parking garages, and institutional buildings. V., Vijay, 2006-11-20 Although the use of composites has increased in many industrial, commercial, medical, and defense applications, there is a lack of technical literature that examines composites in conjunction with concrete construction. Fulfilling the need for a comprehensive explicit guide, Reinforced Concrete Design with FRP Composites presents specific information. Reinforced Concrete Design with the Canadian Code B. N. Thadani, 1982. *Reinforced Concrete* J. G. MacGregor, F. Michael Bartlett, 2000 This text is intended primarily for third or fourth year Civil Engineering students at Canadian universities. It can also be used in graduate courses. Thoroughly Canadianized, this text provides accurate up-to-date and comprehensive coverage of Canadian engineering design and practice. The First Canadian Edition of Reinforced Concrete has been adapted from the U.S. third edition text to reflect the Canadian concrete design code A23.3-94 Design of Concrete Structures issued by the Canadian Standards Association. With the exception of the CPCA Concrete Design Handbook, this is the first Canadian textbook that is compatible with the current Canadian design code. The CPCA Handbook, while used in many Canadian engineering programs, is not considered an adequate learning tool for students. In our book, the theory and practice of reinforced concrete design is explained in a systematic and clear fashion with an abundance of step-by-step worked examples, illustrations, and diagrams. The focus is on preparing students to make the many judgement decisions required in reinforced concrete design. Lead author James MacGregor is a renowned authority on reinforced concrete design. He has been a distinguished teacher and a member of various code committees in Canada. *Reinforced Concrete Design in Canada* S. U. Pillai, Donald Wayne
