Reinventing The Factory Productivity Breakthroughs In Manufacturing Today:

Reinventing the Factory II Roy L. Harmon, Leroy D. Peterson, 1992 Documents more than a hundred real life applications of productivity improvement

Reinventing the Warehouse Roy L. Harmon, 1993 Having successfully reinvented the factory in his previous books Harmon extends his discussion of productivity from the factory of the future to the 21st century warehouse He illustrates real life applications of important warehousing improvements in more than 50 companies throughout the world Includes examples from GM IBM Xerox 3M and others 150 line drawings

Advances in Production Management Systems E. Eloranta, 2012-12-02 This book is divided into four sections invited papers principles systems and techniques The invited papers form an extensive overview of the state of the art of production management The themes range from the everlasting hunt for better productivity to the implications of CIM architectures particularly CIM OSA for production management The other three sections of the book look at the various problems affecting production management One of the characteristics of modern production management is the need for better principles systems and techniques for interorganizational production management Another topic of crucial relevance is the necessity to master not only repetitive manufacturing but also one of a kind product manufacturing From the managerial point of view the forecast based make to stock principles have proven insufficient with market forces demanding fast and reliable deliveries of customer oriented products The goals of production management have been re evaluated as a result

Reinventing the Factory Roy L. Harmon, Leroy D. Peterson, 1990 The factory of the future is here We have the technology and professional knowledge say leading manufacturing consultants Roy Harmon and Leroy Peterson to implement revolutionary concepts that many managers might regard as futuristic In this path breaking book Harmon and Peterson move beyond theory to document more than a hundred real life applications of productivity improvement from the focused factory and assembly process design to the plantwide plan gathered from Andersen Consulting Arthur Andersen Co s offices around the world The reorganization of existing plants into multiple factories within a factory is the single most important feature of productivity improvement according to Harmon and Peterson These smaller units known as subplants are honed to the smallest practical size to ensure the highest level of productivity Multiple subplants can be clustered to focus accountability and authority for production of product families into easily managed groups of processes With hundreds of diagrams and using examples of companies that operate focused factories in dozens of countries Harmon and Peterson detail both the physical and organizational changes required to make the focused factory a successful and profitable feature of a plant s modernization In addition to creating subplants and subplant clusters Harmon and Peterson show how manufacturers can dramatically increase productivity by adopting a plantwide plan In its most basic form the plantwide plan is a layout of a single factory It includes to the extent practical not only the ideal layout but also step by step strategies for movement of individual processes from their current locations in the factory to final target destinations Harmon and Peterson explain how managers can use the plantwide plan to

eliminate the common problem of compromising ideals too early to accommodate assumed constraints and turn an existing factory into a competitive factory of the future today Flexibility creativity and dynamic planning are key concepts for attaining superior manufacturing results For plant modernization to be profitable the organizational structure must keep pace Achieving world class status is not enough The new hallmark of excellence must be continuous improvement to maintain a superior position The plans and suggestions outlined in Reinventing The Factory allow the entrepreneur the responsibility and authority to effect ongoing improvements and render processes adaptable to reflect additions or removals of product lines changes in sales volume over time and modifications resulting from previous or concurrent improvements Harmon and Peterson provide the valuable tools and methods necessary to attain such goals They highlight the dynamic nature of progress itself and show how managers can overcome the most tenacious habit the resistance to change

Manufacturing: The Next Decade Richard J. Schonberger, 2010-05-11 Since the invention of double entry bookkeeping managers have judged a company's worth by sales and profits. Now Richard J. Schonberger, the architect of the worldwide Just In Time revolution, reaches beyond financials to redefine excellence and reveals with new benchmark data how pioneers become dynasties. Schonberger's pathbreaking new research reveals that from 1950 to 1995, while financials dipped and soared repeatedly, industrial decline and ascendancy correlated perfectly with inventory turnover, one of two key nonfinancial indicators and a bedrock measure along with customer satisfaction of a company's power, strength, and value. In this immensely readable book, he captures these new metrics, the true predictions of future success in 16 customer-focused principles created from self-scored reports supplied by over 100 pioneering manufacturers in nine countries. Armed with new world-class benchmark data, Schonberger redefines excellence in terms of competence, capability, and customer-focused employee-driven data-based performance. For front-line associates to senior executives, Schonberger has written manufacturing's action agenda for the next decade. This book will be indispensable reading for manufacturing and general managers in all industries as well as for pension fund managers, institutional investors, stock analysts, and stockbrokers.

Let's Fix It! Richard J. Schonberger, 2001-12-06 No company is built to last, argues world-renowned manufacturing guru Richard J. Schonberger. In this devastating indictment of current manufacturing practices, Schonberger submits a four-part revolutionary plan to solve the manufacturing crisis for good. From his statistically reliable database of 500 top global manufacturers, Schonberger finds that by the critical worldwide standard of lean production, shedding inventories, General Motors, General Electric, Toyota, and other world leaders have stopped improving. He presents powerful evidence that in recent years, record profits have covered up waste and weakness. Clearly, a lack of will to renew and recover from the natural tendency toward regression and erosion is more than a matter of garden variety complacency; it is devastating. As that is in this new era of global hypercompetition, Schonberger asserts that the inclination of industry leaders to engage in stock-hyping to gain a quick fix from the dot-com explosion has distracted attention from the basics of world-class excellence. Among other villains contributing to the crisis, Schonberger contends, are newly hired managers with no trial-by-fire experience, bad equipment, systems, and job design, and retention of unprofitable customers and anachronistic command-and-control managerial hierarchies. What to do? Just as he introduced the legendary just-in-time framework to the West in the 1980s, Schonberger prescribes strong medicine to cure our current malaise. Find your blind spots, he says. Roll confusing time-sapping initiatives into a master program that is immune from the flavor of the month. Put lean into heavy-handed control systems. Develop products and standardize processes at home base for ease of migrating volume production anywhere in the world.

The Routledge Companion to Lean Management Torbjorn H. Netland, Daryl J. Powell, 2016-12-08 Interest in the phenomenon known as lean has grown significantly in recent years. This is the first volume to provide an academically rigorous overview of the field of lean management, introducing the reader to the application of lean in diverse applications.

areas from the production floor to sales and marketing from the automobile industry to academic institutions The volume collects contributions from well known lean experts and up and coming scholars from around the world The chapters provide a detailed description of lean management across the manufacturing enterprise supply chain accounting production sales IT etc and offer important perspectives for applying lean across different industries construction healthcare logistics The contributors address challenges and opportunities for future development in each of the lean application areas concluding most chapters with a short case study to illustrate current best practice The book is divided into three parts The Lean Enterprise Lean across Industries A Lean World This handbook is an excellent resource for business and management students as well as any academics scholars practitioners and consultants interested in the lean world Balanced

Automation Systems Luis M. Camarinha-Matos, Hamideh Afsarmanesh, 2013-06-05 Towards Balanced Automation The concept Manufacturing industries worldwide are facing tough challenges as a consequence of the globalization of economy and the openness of the markets Progress of the economic blocks such as the European Union NAFTA and MERCOSUR and the global agreements such as GATT in addition to their obvious economic and social consequences provoke strong paradigm shifts in the way that the manufacturing systems are conceived and operate To increase profitability and reduce the manufacturing costs there is a recent tendency towards establishing partnership links among the involved industries usually between big industries and the networks of components suppliers To benefit from the advances in technology similar agreements are being established between industries and universities and research institutes Such an open tete cooperation network may be identified as an extended enterprise or a virtual enterprise In fact the manufacturing process is no more carried out by a single enterprise rather each enterprise is just a node that adds some value a step in the manufacturing chain to the cooperation network of enterprises The new trends create new scenarios and technological challenges especially to the Small and Medium size Enterprises SMEs that clearly comprise the overwhelming majority of manufacturing enterprises worldwide Under the classical scenarios these SMEs would have had big difficulties to access or benefit from the state of the art technology due to their limited human financial and material resources **Handbook of Construction**
