Kocsis,S.I. Baskin,Stephen W. Schaffer,2012-12-06 It has become an annual custom for the Physiological Society of Philadelphia to sponsor a spring symposium in honor of A N Richards 876 1966 a research pharmacologist who developed the classical micropuncture technique for studying kidney function The A N Richards Symposium for 1979 was held on April 23 24 in Valley Forge Pennsylvania The theme of this

symposium was The Actions of Taurine on Excitable Tissues Although taurine was discovered as a constituent of bile salts in 1857 by a chemist and an anatomist Gmelin and Tiedemann interest today centers chiefly on the extrahepatic actions of taurine especially in brain heart and other excitable tissues Research on taurine is clearly in a period of exponential growth We can be sure that the research reports presented and described herein as the Proceedings of the Symposium will provide impetus for further growth Thus the report describing macromolecular receptors for taurine in myocardial sarcolemma may provide a model for exploring the molecular mechanisms that underlie the actions of taurine Stabilization of membranes and modulation of ion fluxes are two fundamental actions of taurine dealt with in many of these reports It is just these actions of taurine that have been reported by several investigators as being involved in human myotonia diabetes and heart failure
