Role of Mathematics Discourse in Producing Leaders of Discourse Libby Knott, 2010-01-01 The intent of this monograph is to showcase successful implementation of mathematical discourse in the classroom Some questions that might be addressed are How does a teacher begin to learn about using discourse purposefully to improve mathematics teaching and learning How is discourse interwoven into professional development content courses to provide teachers with the tools necessary to begin using discourse in their own classrooms What does a discourse rich classroom look like and how is it different from other classrooms from both the teacher s and the students perspectives How can teachers of pre service teachers integrate discourse into their content and methods courses How can we use discourse research to inform work with teachers both pre and in service for example to help them know how to respond to elicited knowledge from students in their classrooms What are the discourse challenges in on line mathematics courses offered for professional development Can on line classrooms also be discourse rich What would that look like In what ways does mathematical discourse differ from discourse in general **Mathematical Discourse** Kay O'Halloran, 2004-12-01 This book examines mathematical discourse

from the perspective of Michael Halliday s social semiotic theory In this approach mathematics is conceptualized as a multisemiotic discourse involving language visual images and symbolism The book discusses the evolution of the semiotics of mathematical discourse and then proceeds to examine the grammar of mathematical symbolism the grammar of mathematical visual images intersemiosis between language visual images and symbolism and the subsequent ways in which mathematics orders reality The focus of this investigation is written mathematical texts The aims of the book are to understand the semantic realm of mathematics and to appreciate the metaphorical expansions and simultaneous limitations of meaning in mathematical discourse The book is intended for linguists semioticians social scientists and those interested in mathematics and science education In addition the close study of the multisemiotic mature of mathematics has implications for other studies adopting a social semiotic approach to multimodality *A Handbook of Mathematical Discourse* Charles

Wells,2003 **Mathematical Discourse that Breaks Barriers and Creates Space for Marginalized Learners**

,2017-01-01 For the past decade reform efforts have placed importance on all students being able to participate in collaborative and productive mathematical discourse as an essential component for their learning of mathematics with deep conceptual understandings In this book our intent is to support mathematics education researchers teacher educators teachers and policy makers in providing positive solutions to the enduring challenge in mathematics education of enabling all participants including diverse students to equitably access mathematical discourse By diverse learners we mean learners who are minoritized in terms of gender disability or and social cultural ethnic racial or language backgrounds We aim to increase understanding about what it means to imagine design and engage with policy and practice which enhance opportunities for all students to participate in productive mathematical discourse In widening the lens across policy and practice settings we recognize the interplay between the many complex factors that influence student participation in mathematics The various chapters tell practical stories of equitable practices for diverse learners within a range of different contexts Different research perspectives empirical traditions and conceptual foci are presented in each chapter Various aspects of diversity are raised issues of concern are engaged with and at times conventional wisdom challenged as the authors provide insights as to how educators may address issues of equitable access of minoritized learners to the mathematical discourse within settings across early primary through to high school and situated in schools or in family and community settings

The Pragmatics of Mathematics Education Tim Rowland,2000 Annotation In *The Pragmatics of Mathematics Education* Tim Rowland examines students in the process of making and coming to know mathematics focusing on the gap between conjecture and belief between assertion and conviction The unexpected finding is that vague language plays an essential role in the communication of students propositions and attitudes Drawing on a large original corpus of mathematical conversations with students whose ages range from 5 to 25 the book includes reports of four empirical studies each of which highlights how students and teachers deploy vague language in various mathematical contexts The book offers Introduction to pragmatics and pragmatic tools Understanding of vague language and what speakers achieve by using it Awareness of the prevalence and function of vague language in the classroom Wide ranging psychological and philosophical discussion of induction and generalisation Major reference on generic examples as a mode of proof **Language for**

Learning Mathematics: Assessment for Learning in Practice Clare Lee,2006-06-16 Assessment for learning is a powerful way to raise standards and improve learning However as this book shows effective assessment for learning in the mathematics classroom depends on pupils being able and willing to use mathematical language to express their ideas When discussion negotiation and explanation are encouraged teachers use assessment for learning creatively the work quickly becomes more challenging and the pupils come to see themselves as successful learners Many pupils find it difficult to express ideas in mathematics because of problems with the language that is used to convey mathematical concepts This book

shows teachers how to help pupils express what they really know and understand so that assessment for learning can be used The book Discusses what mathematical language is and what it is not Suggests practical approaches to introducing more discourse into the classroom Explores the ideas of assessment for learning rich questioning and dialogue effective feedback and peer and self assessment and suggests how these can be used effectively in mathematics classrooms to improve learning Language for Learning Mathematics is key reading for teachers and trainee teachers in mathematics as well as assessment advisors at LAs *What Counts as Mathematical Discourse?* Judit Moschkovich, 2003 In this paper I use situated and socio cultural perspective Gee 1996 1999 to examine descriptions of mathematical discourse and an example of student talk in a mathematics classroom Using this example I discuss how the distinction between everyday and mathematical discourse can help or hinder us in hearing the mathematical content in student talk Contains 1 figure and 1 endnote This work was supported in part by a grant from NSF REC 9896129 and REC 0096065 For complete proceedings see ED500858

Enabling Mathematics Learning of Struggling Students Yan Ping Xin, Ron Tzur, Helen Thouless, 2022-07-11 This book provides prospective and practicing teachers with research insights into the mathematical difficulties of students with learning disabilities and classroom practices that address these difficulties This linkage between research and practice celebrates teachers as learners of their own students mathematical thinking thus contributing an alternative view of mathematical progression in which students are taught conceptually The research based volume presents a unique collaboration among researchers in special education psychology and mathematics education from around the world It reflects an ongoing work by members of the International Group for the Psychology of Mathematics Education PME and the North American Chapter of the PME Working Groups The authors of chapters in this book who have been collaborating extensively over the past 7 years are from Australia Canada the United Kingdom and the United States **Mathematics Instruction in Dual Language Classrooms** Marco A. Bravo, Kip Téllez, 2024-07-01 Language and culture play a critical role in the teaching of mathematics and this role intensifies when considering the teaching of mathematics in dual language classrooms This book unpacks lessons learned from socio cultural theory being applied to research of the teaching of mathematics to Emergent Bilinguals with the end of informing practice Utilizing a socio cultural lens authors present the possibilities and limits of the teaching of mathematics in dual language programs 90 10 50 50 models Themes of translanguaging disciplinary literacy instruction and culturally responsive instruction are leveraged to test the potential of these constructs to assist Spanish English Emergent Bilinguals access rigorous mathematics content Authors also present limits to these models as often they can overshadow the mathematics learning We embrace a stance where language and literacy are seen as tools for content area learning and not as ends unto themselves Multilingual Learners and Academic Literacies Daniella Molle, Edynn Sato, Timothy Boals, Carol A. Hedgspeth, 2015-03-05 Shifting the discourse from a focus on academic language to the more dynamic but less researched construct of academic literacies this volume addresses three key

questions What constitutes academic literacy What does academic literacy development in adolescent multilingual students look like and how can this development be assessed What classroom contexts foster the development of academic literacies in multilingual adolescents The contributing authors provide divergent definitions of academic literacies and use dissimilar theoretical and methodological approaches to study literacy development Nevertheless all chapters reflect a shared conceptual framework for examining academic literacies as situated overlapping meaning making practices This framework foregrounds students participation in valued disciplinary literacy practices Emphasized in the new college and career readiness standards the notion of disciplinary practices allows the contributing authors to bridge the language content dichotomy and take a more holistic as well as nuanced view of the demands that multilingual students face in general education classrooms The volume also explores the implications of the emphasis on academic literacy practices for classroom instruction research and policy

Proposals for Research Gerry Stahl, 2011-01-11 My career has usually been funded by grants Here are some of the proposals I wrote at the University of Colorado and at Drexel University Successful grant proposals are tricky to write The ones reproduced here might provide helpful examples They may also provide explicit statements of some of the goals of my research over the years

Language and Mathematics Education Judit N. Moschkovich, 2010-11-01 Issues of language in mathematics learning and teaching are important for both practical and theoretical reasons Addressing issues of language is crucial for improving mathematics learning and teaching for students who are bilingual multilingual or learning English These issues are also relevant to theory studies that make language visible provide a complex perspective of the role of language in reasoning and learning mathematics What is the relevant knowledge base to consider when designing research studies that address issues of language in the learning and teaching of mathematics What scholarly literature is relevant and can contribute to research In order to address issues of language in mathematics education researchers need to use theoretical perspectives that integrate current views of mathematics learning and teaching with current views on language discourse bilingualism and second language acquisition This volume contributes to the development of such integrated approaches to research on language issues in mathematics education by describing theoretical perspectives for framing the study of language issues and methodological issues to consider when designing research studies The volume provides interdisciplinary reviews of the research literature from four very different perspectives mathematics education Moschkovich Cultural Historical Activity Theory Gutierrez Sengupta Irving Dieckmann systemic functional linguistics Schleppegrell and assessment Solano Flores This volume offers graduate students and researchers new to the study of language in mathematics education an introduction to resources for conceptualizing framing and designing research studies For those already involved in examining language issues the volume provides useful and critical reviews of the literature as well as recommendations for moving forward in designing research Lastly the volume provides a basis for dialogue across multiple research communities engaged in collaborative work to address these pressing

issues **Research for Educational Change** Jill Adler, Anna Sfard, 2016-06-17 Research for Educational Change presents ways in which educational research can fulfil its commitments to educational practice Focussing its discussion within the context of mathematics education it argues that while research generated insights can have beneficial effects on learning and teaching the question of how these effects are to be generated and sustained is far from evident The question of how to turn research into educational improvement is discussed here in the context of learning and teaching hindered by poverty and social injustice In the first part of the book four teams of researchers use different methodologies while analysing the same corpus of data collected in a South African mathematics classroom In the second part each of these teams makes a specific proposal about what can be done and how so that its research generated insights have a tangible beneficial impact on what is happening in mathematical classrooms Combining two discourses that of researchers speaking to one another and that of researchers communicating their insights to those responsible for educational practice the book deals with the perennial question of communication between those who study educational processes and those who are directly responsible for teacher education educational research and classroom practices This book will be key reading for postgraduates researchers and academics in education and particularly in the areas of mathematics education education research teacher education and classroom practice It will also appeal to teacher educators practitioners and undergraduate students interested in educational research

Rough Draft Math Amanda Jansen, 2023-10-10 Talking and writing about unfinished ideas is vital to learning mathematics but most students only speak up when they think they have the right answer especially middle school and high school students Amanda Jansen and her collaborating teachers have developed a breakthrough approach to address this challenge In *Rough Draft Math: Revising to Learn* Jansen shares the power of infusing math class with the spirit of revision so that students feel comfortable thinking aloud as they problem solve rather than talking only to perform right answers Creating a Community of Learners As part of the rough draft framework a class of students becomes an equitable and inclusive community of thinkers one where students feel safe to engage in discourse while developing mathematical competency and confidence Practical Application of Innovative Ideas This book includes specific teaching techniques and a range of classroom vignettes showing rough draft math in action within a student centered teaching approach Children can develop solutions at their own pace and share thought processes behind their conclusions Classroom Tested Jansen has developed the concept of rough draft math in collaboration with a diverse group of dynamic and reflective teachers *Rough Draft Math* provides a blueprint for educators to allow free thinking discussion while maintaining the mathematical learning goals *Rough Draft Math* Jansen shows how to create an energetic classroom culture where students readily participate and share their evolving understanding while engaging in math talk collaborative problem solving and ongoing revision of ideas

Computers in Mathematics Education Rosamund Sutherland,John Mason,2012-12-06 The advent of fast and sophisticated computer graphics has brought dynamic and interactive images under the control of professional mathematicians and mathematics teachers This volume in the NATO Special Programme on Advanced Educational Technology takes a comprehensive and critical look at how the computer can support the use of visual images in mathematical problem solving The contributions are written by researchers and teachers from a variety of disciplines including computer science mathematics mathematics education psychology and design Some focus on the use of external visual images and others on the development of individual mental imagery The book is the first collected volume in a research area that is developing rapidly and the authors pose some challenging new questions *Advances in Language and Education* Anne McCabe,Mick O'Donnell,Rachel Whittaker,2007-07-19 This book examines new functional approaches to language and education and the

impact of these on literacy in the classroom The first section looks at issues of multimodality in which the definition of a text is expanded to include not only that which is written down but also the interaction of writing graphics and audiovisual material The contributors explores ways in which language education can be expanded to deal with multimodal discourse whether in children s books in textbooks or on the web The second section looks at how critical discourse analysis and appraisal theory can be used as tools for assessing the effectiveness of student writing and literacy achievement and also for helping developing writers to write more successfully The final section argues that corpus based studies of language have changed the way we see language and that the way we teach language should evolve in line with these changes This appealing survey of new directions in language and education includes contributions from internationally renowned scholars It will be of interest to researchers in systemic functional linguistics or language and education

Learning and Practice
Patricia Murphy, Kathy Hall, 2008-07-18 By examining ideas about learning that transcend typical boundaries such as school workplace or home school this book emphasises the socially negotiated and embedded nature of meaning making and how learners learn to use the cognitive tools of their cultural community through participation in social activity The editors argue that this is the means by which individual agency is extended and learners identities as forms of competency are transformed The book locates sociocultural understanding in a wide theoretical frame and demonstrates its implications for learning and assessment generally covering a range of educational and workplace settings The contributions challenge ways of understanding learning and thinking about practice both teaching and assessment Drawing on the international literature this book is essential reading for students of curriculum learning and assesment in all sectors from pre primary to further and higher education It is suitable as a core text for masters and taught doctorate programmes It will be of interest to a range of professionals involved with curriculum learning and the practice of teaching and assessment It is also relevant to those in work based and professional education and training and informal educational settings A unique collection in a field that is underrepresented it will also be of interest to an acadmeic audience
