Mathematical Modeling Estimation And Imaging:

Mathematical Modeling, Estimation, and Imaging David C. Wilson, 2000 **Handbook of Mathematical Models in Computer Vision** Nikos Paragios, Yunmei Chen, Olivier D. Faugeras, 2006-01-16 Abstract Biological vision is a rather fascinating domain of research. Scientists of various origins like biology, medicine, neurophysiology, engineering, mathematics, etc., aim to understand the processes leading to visual perception and at reproducing such systems. Understanding the environment is most of the time done through visual perception which appears to be one of the most fundamental sensory abilities in humans and therefore a significant amount of research effort has been dedicated towards modelling and reproducing human visual abilities. Mathematical methods play a central role in this endeavour.

Introduction David Marr's theory was a pioneering step towards understanding visual perception. In his view, human vision was based on a complete surface reconstruction of the environment that was then used to address visual subtasks. This approach was proven to be insufficient by neurobiologists and complementary ideas from statistical pattern recognition and artificial intelligence were introduced to better address the visual perception problem. In this framework, visual perception is represented by a set of actions and rules connecting these actions. The emerging concept of active vision consists of a selective visual perception paradigm that is basically equivalent to recovering from the environment the minimal piece of information required to address a particular task of interest.

Modern Morphometrics in Physical Anthropology Dennis E. Slice, 2006-06-01 Morphometrics has undergone a revolutionary transformation in the past two decades as new methods have been developed to address shortcomings in the traditional multivariate analysis of linear distances, angles, and indices. While there is much active research in the field, the new approaches to shape analysis are already making significant and ever-increasing contributions to biological research, including physical anthropology. *Modern Morphometrics in Physical Anthropology* highlights the basic machinery of the most important methods while introducing novel extensions to these methods and illustrating how they provide enhanced results compared to more traditional approaches. *Modern Morphometrics in Physical Anthropology* provides a comprehensive sampling of the applications of modern sophisticated methods of shape analysis in anthropology and serves as a starting point for the exploration of these practices by students and researchers who might otherwise lack the local expertise or training to get started. This text is an important resource for the general morphometric community that includes ecologists, evolutionary biologists, systematists, and medical researchers.
