Design and Development of Model Predictive Primary Control of Micro Grids Puvvula Vidyasagar, K. Shanti Swarup, 2023-01-01 This book provides a design and development perspective MPC for micro grid control emphasizing step by step conversion of a nonlinear MPC to linear MPC preserving critical aspects of nonlinear MPC The book discusses centralized and decentralized MPC control algorithms for a generic modern day micro grid consisting of vital essential constituents It starts with the nonlinear MPC formulation for micro grids It also moves towards the linear time invariant and linear time variant approximations of the MPC for micro grid control The contents also discuss how the application of orthonormal special functions can improve computational complexity of MPC algorithms It also highlights various auxiliary requirements like state estimator disturbance compensator for robustness selective harmonic eliminator for eliminating harmonics in the micro grid etc These additional requirements are crucial for the successful online implementation of the MPC In the end the book shows how a well designed MPC is superior in performance compared to the conventional micro grid primary controllers discussed above The key topics discussed in this book include the detailed modeling of micro grid components operational modes in micro grid and their control objectives conventional micro grid primary controllers the importance of MPC as a micro grid primary controller understanding of MPC operation nonlinear MPC formulation linear approximations of MPC application of special functions in the MPC formulation and other online requirements for the MPC implementation The examples in the book are available both from a calculation point of view and as MATLAB codes This helps the students get acquainted with the subject first and then allows them to implement the subject they learn in software for further understanding and research

Financial Market Design by an Agent-Based Model Takanobu Mizuta, Isao Yagi, 2025-02-10 This is the first book to focus on designing a financial market that works well and that includes making and or modulating detailed regulations and or rules by a computer simulation of an agent based artificial

financial market model ABAFMM The design of a financial market is very important for the development and maintenance of an advanced economy but designing it is not easy because changes in detailed rules even those that seem trivial sometimes have unexpectedly large impacts and side effects in a financial market which is a complex system Traditional economics cannot treat a financial market as a complex system in which micro macro interaction and feedback loops have played essential roles because traditional economics can only treat macrophenomena and micro processes separately ABAFMM can do it however This book explains first why ABAFMMs are needed to design financial markets and which models have good features Following that explanation the book discusses how to build the models Then cases of recent studies and their contributions are shown and finally the difficulties of researchers in this field are considered This book is expected to facilitate the design of more ABAFMMs to contribute to creating financial markets that will further develop and maintain advanced economies
