**Mathematics Curriculum Reforms Around the World** Yoshinori Shimizu, Renuka Vithal, 2023-06-28 This Open Access volume by the International Commission on Mathematical Instruction ICMI is an outcome of the ICMI Study 24 and gives a status quo of school mathematics reform around the world and what we can learn from this movement Each theme and section of the book offers descriptions and analyses of multiple case studies in different countries and contexts along with opportunities to compare contrast and learn from these diverse experiences The volume provides a synthesis and meta analysis of the different historical geographical and global aspects of school mathematics reforms and explores in which way curricula are elaborated proposed changed and reorganized It offers a more informed and comprehensive analysis of the roles of different actors and of the many aspects influencing and shaping mathematics curriculum reforms that are taking or have taken place It also explores the possibilities and means to tackle a curricular reform in the current scenario we live in and how to unfold future developments This book will be of interest to practitioners and scholars with an interest in school mathematics curriculum reforms It will also be a useful resource to those involved in school mathematics curriculum reform initiatives by providing current information about the curriculum changes that are taking place in respect of content teacher education educational materials and a range of implementation challenges across diverse contexts

**The International Commission on Mathematical Instruction, 1908-2008: People, Events, and Challenges in Mathematics Education** Fulvia Furinghetti, Livia Giacardi, 2023-01-30 The book presents the history of ICMI through a prosopographical approach In other words it pays a lot of attention to the actors of the International movement The portraits of the members of the ICMI Central Committees 1908 1936 and ICMI Executive Committees 1952 2008 and other eminent figures in ICMI history who have passed away in the first 100 years of its life are the guiding thread of the volume Each portrait includes Biographical information An outline of the various contributions made by the individual in question to the study of problems pertaining to mathematics teaching education Primary bibliography Secondary with particular attention to the publications concerning the teaching of mathematics Images photos book frontispieces relevant manuscripts The authors of the portraits 30 altogether are researchers in the history of mathematics mathematics and mathematics education The focus on the officer's role within ICMI and on his/her contributions to mathematics education make the portraits different from usual biographies In particular since most officers were active mathematicians the portraits shed light on aspects of their lesser known activity Connecting chapters place the action of these figures in the historical context and in the different phases of ICMI history

**Research and Development in University Mathematics Education** Viviane Durand-Guerrier, Reinhard Hochmuth, Elena Nardi, Carl Winsløw, 2021-04-16 In the last thirty years or so the need to address the challenges of teaching and learning mathematics at university level has become increasingly appreciated by university mathematics teachers and beyond by educational institutions around the world Indeed mathematics is both a condition and an obstacle to success for students in many educational programmes vital to the 21st century knowledge society for example in pure and applied mathematics engineering natural sciences technology economics finance management and so on This breadth of impact of mathematics implies the urgency of developing research in university mathematics education and of sharing results of this research widely This book provides a bespoke opportunity for an international audience of researchers in didactics of mathematics mathematicians and any teacher or researcher with an interest in this area to be informed about state of the art developments and to heed future research agendas This book emerged from the activities of the research project INDRUM acronym for International Network for Didactic Research in University Mathematics which aims to contribute to the development of research in didactics of mathematics at all levels of tertiary education with a particular concern for the development of early career researchers in the field and for dialogue with university mathematicians The aim of the book is to provide a deep synthesis of the research field as it appears through two INDRUM conferences organised in 2016 and 2018 It is an original contribution which highlights key research perspectives addresses seminal theoretical and methodological issues and reports substantial results concerning the teaching and learning of mathematics at university level including the teaching and learning of specific topics in advanced mathematics across a wide range of university programmes

**Cases of Assessment in Mathematics Education** M. Niss, 2013-04-17 The present book Cases of Assessment in Mathematics Education is one of two studies resulting from an ICMI Study Conference on Assessment in Mathematics Education and Its Effects The book which is published in the series of ICMI Studies under the general editorship of the President and Secretary of ICMI is closely related to another study resulting from the same conference Investigations into Assessment in Mathematics Education Niss 1992 The two books although originating from the same sources and having the same editor emphasize different aspects of assessment in mathematics education and can be read independently of one another While the present

book is devoted to presenting and discussing cases of assessment that are actually implemented the other study attempts to critically analyze general and principal aspects of assessment Naturally the content of either book is enriched by the materials and perspectives provided by the other one In order to put this book and its background into context the nature and scope of the ICMI studies are outlined briefly below

**European Congress of Mathematics** Antal Balog, Domokos Szász, András Recski, Gyula Katona, 1998-07-21 This is the second volume of the proceedings of the second European Congress of Mathematics Volume I presents the speeches delivered at the Congress the list of lectures and short summaries of the achievements of the prize winners Together with volume II it contains a collection of contributions by the invited lecturers Finally volume II also presents reports on some of the Round Table discussions This two volume set thus gives an overview of the state of the art in many fields of mathematics and is therefore of interest to every professional mathematician

**Mathematics Education as a Research Domain: A Search for Identity** Anna Sierpinska, Jeremy Kilpatrick, 2013-03-14 No one disputes how important it is in today's world to prepare students to understand mathematics as well as to use and communicate mathematics in their future lives That task is very difficult however Refocusing curricula on fundamental concepts producing new teaching materials and designing teaching units based on mathematicians common sense or on logic have not resulted in a better understanding of mathematics by more students The failure of such efforts has raised questions suggesting that what was missing at the outset of these proposals designs and productions was a more profound knowledge of the phenomena of learning and teaching mathematics in socially established and culturally politically and economically justified institutions namely schools Such knowledge cannot be built by mere juxtaposition of theories in disciplines such as psychology sociology and mathematics Psychological theories focus on the individual learner Theories of sociology of education look at the general laws of curriculum development the specifics of pedagogic discourse as opposed to scientific discourse in general the different possible pedagogic relations between the teacher and the taught and other general problems in the interface between education and society Mathematics aside from its theoretical contents can be looked at from historical and epistemological points of view clarifying the genetic development of its concepts methods and theories This view can shed some light on the meaning of mathematical concepts and on the difficulties students have in teaching approaches that disregard the genetic development of these concepts

**International Handbook of Mathematics Education** Alan Bishop, M.A. (Ken) Clements, Christine Keitel-Kreidt, Jeremy Kilpatrick, Colette Laborde, 2012-12-06 ALAN J BISHOP Monash University Clayton Victoria Australia RATIONALE Mathematics Education is

becoming a well documented field with many books journals and international conferences focusing on a variety of aspects relating to theory research and practice That documentation also reflects the fact that the field has expanded enormously in the last twenty years At the 8th International Congress on Mathematics Education ICME in Seville Spain for example there were 26 specialist Working Groups and 26 special ist Topic Groups as well as a host of other group activities In 1950 the Commission Internationale pour l Etude et l Amelioration de l Enseignement des Mathematiques CIEAEM was formed and twenty years ago another active group the International Group for the Psychology of Mathematics Education PME began at the third ICME at Karlsruhe in 1976 Since then several other specialist groups have been formed and are also active through regular conferences and publications as documented in Edward Jacobsen s Chapter 34 in this volume **Actes Du 7e**

**Congrès International Sur L'enseignement Des Mathématiques** Claude Gaulin,1994 Advances in the Anthropological Theory of the Didactic Yves Chevallard,Berta Barquero,Marianna Bosch,Ignasi Florensa,Josep Gascón,Pedro Nicolás,Noemí Ruiz-Munzón,2022-01-22 The book focuses on the latest developments of the Anthropological Theory of the Didactic ATD and its links with other approaches in mathematics education Leading researchers in the ATD and especially its creator Yves Chevallard present recent research results theoretical advances and new methodologies in this approach concerning critical educational problems at all levels The book is addressed to researchers in mathematics education and all related fields to teacher educators and teachers in primary secondary and tertiary education interested in curriculum issues and research in didactics The book includes four sections that correspond to four axes of current research in the framework of the ATD The first one studies the relations between the ATD and other research frameworks The second section focuses on the crucial role of didactics in teacher education and the experiences carried out at different instructional levels The third section addresses the curriculum problem in the historical transition from the classical paradigm of visiting works to the emerging didactic paradigm of questioning the world The last section is about research in didactics at the university level with investigations about the analysis of didactic transposition processes and the design and implementation of various instructional formats **Investigations into Assessment in Mathematics Education** M. Niss,2013-06-29 This book is one of the first to attempt a systematic in depth analysis of assessment in mathematics education in most of its important aspects it deals with assessment in mathematics education from historical psychological sociological epistmological ideological and political perspectives The book is based on work presented at an invited international ICMI seminar and includes chapters by a team of outstanding and prominent scholars in the field of mathematics education Based on the observation of an increasing mismatch between the goals and accomplishments of mathematics education and prevalent assessment modes the book assesses assessment in mathematics education and its effects In so doing it pays particular attention to the need for and possibilities of assessing a much wider range of abilities than before including understanding problem solving and posing modelling and creativity The book will be of particular interest to mathematics educators who are

concerned with the role of assessment in mathematics education especially as regards innovation and to everybody working within the field of mathematics education and related areas in R D curriculum planning assessment institutions and agencies teacher trainers etc

The Teaching and Learning of Mathematics at University Level Derek Holton, 2006-04-11 This book is the final report of the ICMI study on the Teaching and Learning of Mathematics at University Level As such it is one of a number of such studies that ICMI has commissioned The other Study Volumes cover assessment in mathematics education gender equity research in mathematics education the teaching of geometry and history in mathematics education All of these Study Volumes represent a statement of the state of the art in their respective areas We hope that this is also the case for the current Study Volume The current study on university level mathematics was commissioned for essentially four reasons First universities world wide are accepting a much larger and more diverse group of students than has been the case Consequently universities have begun to adopt a role more like that of the school system and less like the elite institutions of the past As a result the educational and pedagogical issues facing universities have changed Second although university student numbers have increased significantly there has not been a corresponding increase in the number of mathematics majors Hence mathematics departments have to be more aware of their students needs in order to retain the students they have and to attract future students As part of this awareness departments of mathematics have to take the teaching and learning of mathematics more seriously than perhaps they have in the past

### **The Popularization of Mathematics** A. G. Howson, J.

-P. Kahane, 1990-11-22 The papers arising from the ICMI study seminar on the popularization of mathematics held at the University of Leeds UK 17-22 September 1989 *Mathematics Without Borders* Olli Lehto, 1997-12-19 At its meeting in April 1990 at the University of Cambridge the Executive Committee of the International Mathematical Union IMU decided that the largely unorganized archives of the Union should be properly arranged and catalogued Simultaneously the Executive Committee expressed the wish that a history of the Union should be written 1 As Secretary of the Union I had proposed that these issues be discussed at the Cambridge meeting but without having had in mind any personal role in the practical execution of such projects At that time the papers of the IMU were stored in Zurich at the Eidgenössische Technische

Hochschule and I saw no reason why they could not remain there At about this time Professor K Chandrasekharan produced a handwritten article titled The Prehistory of the International Mathematical Union 2 and it seemed to me that this might serve as the beginning of a more comprehensive history I had first thought that Tuulikki MakeUinen who during eight years as the Office Secretary of the IMU had become well acquainted with the Union would do the arranging of the archives in Zurich She had a preliminary look at the material there but it soon became clear that the amount of work required to bring order to it was too great to be accomplished in a few short visits from Helsinki The total volume of material was formidable

**Mathematical Problem Posing** Florence Mihaela Singer, Nerida F. Ellerton, Jinfa Cai, 2015-06-12 The mathematics education community continues to contribute research based ideas for developing and improving problem posing as an inquiry based instructional strategy for enhancing students learning A large number of studies have been conducted which have covered many research topics and methodological aspects of teaching and learning mathematics through problem posing The Authors groundwork has shown that many of these studies predict positive outcomes from implementing problem posing on student knowledge problem solving and posing skills creativity and disposition toward mathematics This book examines in depth the contribution of a problem posing approach to teaching mathematics and discusses the impact of adopting this approach on the development of theoretical frameworks teaching practices and research on mathematical problem posing over the last 50 years Didactics of Mathematics as a Scientific Discipline Rolf Biehler, Roland W. Scholz, Rudolf Sträßer, Bernard Winkelmann, 2006-04-11 Didactics of Mathematics as a Scientific Discipline describes the state of the art in a new branch of science Starting from a general perspective on the didactics of mathematics the 30 original contributions to the book drawn from 10 different countries go on to identify certain subdisciplines and suggest an overall structure or topology of the field The book is divided into eight sections 1 Preparing Mathematics for Students 2 Teacher Education and Research on Teaching 3 Interaction in the Classroom 4 Technology and Mathematics Education 5 Psychology of Mathematical Thinking 6 Differential Didactics 7 History and Epistemology of Mathematics and Mathematics Education 8 Cultural Framing of Teaching and Learning Mathematics Didactics of Mathematics as a Scientific Discipline is required reading for all researchers into the didactics of mathematics and contains surveys and a variety of stimulating reflections which make it extremely useful for mathematics educators and teacher trainers interested in the theory of their practice Future and practising teachers of mathematics will find much to interest them in relation to their daily work especially as it relates to the teaching of different age groups and ability ranges The book is also recommended to researchers in neighbouring disciplines such as mathematics itself general education educational psychology and cognitive science **Invited Lectures from the 13th International Congress on Mathematical Education** Gabriele Kaiser, Helen Forgasz, Mellony Graven, Alain Kuzniak, Elaine Simmt, Binyan Xu, 2018-02-05 The book presents the Invited Lectures given at 13th International Congress on Mathematical Education ICME 13 ICME 13 took place from 24th 31st July

2016 at the University of Hamburg in Hamburg Germany The congress was hosted by the Society of Didactics of Mathematics Gesellschaft f r Didaktik der Mathematik GDM and took place under the auspices of the International Commission on Mathematical Instruction ICMI ICME 13 the biggest ICME so far brought together about 3500 mathematics educators from 105 countries additionally 250 teachers from German speaking countries met for specific activities The scholars came together to share their work on the improvement of mathematics education at all educational levels The papers present the work of prominent mathematics educators from all over the globe and give insight into the current discussion in mathematics education The Invited Lectures cover a wide spectrum of topics themes and issues and aim to give direction to future research towards educational improvement in the teaching and learning of mathematics education This book is of particular interest to researchers teachers and curriculum developers in mathematics education     *Gazette - Australian Mathematical Society* Australian Mathematical Society,1991
