A First Course in Scientific Computing Rubin Landau,2011-10-30 This book offers a new approach to introductory scientific computing It aims to make students comfortable using computers to do science to provide them with the computational tools and knowledge they need throughout their college careers and into their professional careers and to show how all the pieces can work together Rubin Landau introduces the requisite mathematics and computer science in the course of realistic problems from energy use to the building of skyscrapers to projectile motion with drag He is attentive to

how each discipline uses its own language to describe the same concepts and how computations are concrete instances of the abstract. Landau covers the basics of computation, numerical analysis, and programming from a computational science perspective. The first part of the printed book uses the problem-solving environment Maple as its context, with the same material covered on the accompanying CD as both Maple and Mathematica programs. The second part uses the compiled language Java with equivalent materials in Fortran90 on the CD, and the final part presents an introduction to LaTeX replete with sample files. Providing the essentials of computing with practical examples, *A First Course in Scientific Computing* adheres to the principle that science and engineering students learn computation best while sitting in front of a computer, book in hand, in trial and error mode. Not only is it an invaluable learning text and an essential reference for students of mathematics, engineering, physics, and other sciences, but it is also a consummate model for future textbooks in computational science and engineering courses. A broad spectrum of computing tools and examples that can be used throughout an academic career. Practical computing aimed at solving realistic problems. Both symbolic and numerical computations. A multidisciplinary approach: science, math, computer science. Maple and Java in the book itself; Mathematica, Fortran90, Maple, and Java on the accompanying CD in an interactive workbook format. **Primary Maths Student Activity Book 4** Greg Weeks, 2011-10-07. Arranged by the content strands: Number and Algebra, Measurement and Geometry, Statistics and Probability, giving teachers independence and flexibility in constructing a week-by-week maths program. Practical and hands-on activities encourage students to develop their own strategies as confident learners. Graded activities provide effective scaffolding for students and allow teachers to cater for mixed ability classes. Discussion icons are indicated throughout the books to highlight areas where class or small group discussion can take place. Revision boxes contain information to help students recall past learning or offer hints and further explanation of difficult concepts. Full-colour photos and illustrations link learning activities to every-day contexts to help make maths meaningful. Activities are related to Cambridge Maths in a Box, which enriches the program with contextual activities and saves teachers time with planning. **ENC Focus**, 2001.
