Kutateladze, 2010-12-12 This book contains the most remarkable papers of L V Kantorovich in applied and numerical mathematics It explores the principal directions of Kantorovich's research in approximate methods The book covers descriptive set theory and functional analysis in semi ordered vector spaces **Mathematics** A.D.. Aleksandrov, Andrej Nikolaevič Kolmogorov, Mihail Alekseevič Lavrent'ev, 1963 **Commutative Algebra, Volume II** Oscar Zariski, Pierre Samuel, 2019-11-13 The second text in this two book series extends the classical material of Volume I which focuses on field theory and the ideal theory of Noetherian rings and Dedekind domains The connection of Volume II's material to algebraic geometry is stressed throughout the presentation making this book a practical introduction to some basic concepts and the arithmetical foundations of algebraic geometry The opening chapter deals with properties of places and is followed by a chapter that explores the classical properties of polynomial and power series rings and their applications to algebraic geometry The final chapter examines the theory of local rings which provides the algebraic basis for the local study of algebraic and analytical varieties Several helpful Appendixes conclude the text Mathematics Aleksandr Danilovič Aleksandrov, Andrej Nikolaevič Kolmogorov, Mihail Alekseevič Lavrent'ev, 1963 **Commutative Algebra, Volume I** Oscar Zariski, Pierre Samuel, 2019-11-13 A precise fundamental study of commutative algebra this largely self contained treatment is the first in a two volume set Intended for advanced undergraduates and graduate students in mathematics its prerequisites are the rudiments of set theory and linear algebra including matrices and determinants The opening chapter develops introductory notions concerning groups rings fields polynomial rings and vector spaces Subsequent chapters feature an exposition of field theory and classical material concerning ideals and modules in arbitrary commutative rings including detailed studies of direct sum decompositions The final two chapters explore Noetherian rings and Dedekind domains This work prepares readers for the more advanced topics of Volume II which include valuation theory polynomial and power series rings and local algebra *Encyclopaedia of Mathematics* M. Hazewinkel, 2013-11-11 **Learn from the Masters**

Frank Swetz, John Fauvel, Otto Bekken, Bengt Johansson, Victor Katz, 1995-12-31 This book is for high school and college teachers who want to know how they can use the history of mathematics as a pedagogical tool to help their students construct their own knowledge of mathematics Often a historical development of a particular topic is the best way to present a mathematical topic but teachers may not have the time to do the research needed to present the material This book provides its readers with historical ideas and insights which can be immediately applied in the classroom The book is divided into two sections the first on the use of history in high school mathematics and the second on its use in university mathematics The articles are diverse covering fields such as trigonometry mathematical modeling calculus linear algebra vector analysis and celestial mechanics Also included are articles of a somewhat philosophical nature which give general ideas on why history should be used in teaching and how it can be used in various special kinds of courses Each article contains a bibliography to guide the reader to further reading on the subject Science Information News, 1961
