Classic Collection. The Complete Works of H. P. Blavatsky. Works of Henry S. Olcott. Illustrated* H. P. Blavatsky, Henry S. Olcott, Fyodor Dostoyevsky, 2025-02-26 Theosophy is a religion established in the United States during the late 19th century It was founded primarily by the Russian

Helena Blavatsky and draws its teachings predominantly from Blavatsky's writings. Categorized by scholars of religion as both a new religious movement and as part of the occultist stream of Western esotericism, it draws upon both older European philosophies such as Neoplatonism and Asian religions such as Hinduism and Buddhism. At a meeting of the Miracle Club in New York City on 7 September 1875, Blavatsky, Olcott, and Judge agreed to establish an organisation with Charles Sotherton suggesting that they call it the Theosophical Society. Prior to adopting the name Theosophical, they had debated various potential names among them the Egyptological Society, the Hermetic Society, and the Rosicrucian Society. The term was not new but had been previously used in various contexts by the Philaletheians and the Christian mystic Jakob Boehme. Etymologically, the term came from the Greek *theos* (god/s) and *sophia* (wisdom), thus meaning 'god wisdom', 'divine wisdom', or 'wisdom of God'. The term *theosophia* appeared in both Greek and Latin in the works of early church fathers as a synonym for theology. In her book *The Key to Theosophy*, Blavatsky said that the term Theosophy had been coined by the Alexandrian philosophers, especially Ammonius Saccas. Contents: H. P. Blavatsky, *ISIS UNVEILED FROM THE CAVES AND JUNGLES OF HINDOSTAN*, *WHAT IS THEOSOPHY*, *WHAT ARE THE THEOSOPHISTS*, *MAHATMAS AND CHELAS*, *OCCULT OR EXACT SCIENCE*, *THE ESOTERIC CHARACTER OF THE GOSPELS*, *OCCULTISM VERSUS THE OCCULT ARTS*, *IS THEOSOPHY A RELIGION*, *THE VOICE OF THE SILENCE*, *THE KEY TO THEOSOPHY*, *THE SECRET DOCTRINE*, *ADVENTURE AMONG THE ROSICRUCIANS*, *THE GRAND INQUISITOR*. Translated by H. P. Blavatsky, Henry Steel Olcott, *THE LIFE OF BUDDHA AND ITS LESSONS*, *THE BUDDHIST CATECHISM*, *THE GOLDEN RULES OF BUDDHISM*, *THE SPIRIT OF ZOROASTRIANISM*.

Mathematics and Art Lynn Gamwell, 2016. This is a cultural history of mathematics and art from antiquity to the present. Mathematicians and artists have long been on a quest to understand the physical world they see before them and the abstract objects they know by thought alone. Taking readers on a tour of the practice of mathematics and the philosophical ideas that drive the discipline, Lynn Gamwell points out the important ways mathematical concepts have been expressed by artists. Sumptuous illustrations of artworks and cogent math diagrams are featured in Gamwell's comprehensive exploration. Gamwell begins by describing mathematics from antiquity to the Enlightenment, including Greek, Islamic, and Asian mathematics. Then focusing on modern culture, Gamwell traces mathematicians' search for the foundations of their science, such as David Hilbert's conception of mathematics as an arrangement of meaning-free signs, as well as artists' search for the essence of their craft, such as Aleksandr Rodchenko's monochrome paintings. She shows that self-reflection is inherent to the practice of both modern mathematics and art, and that this introspection points to a deep resonance between the two fields. Kurt Gödel posed questions about the nature of mathematics in the language of mathematics, and Jasper Johns asked, 'What is art?' in the vocabulary of art. Throughout, Gamwell describes the personalities and cultural environments of a multitude of mathematicians and artists, from Gottlob Frege and Benoît Mandelbrot to Max Bill and Xu Bing. *Mathematics and Art* demonstrates how mathematical ideas are embodied in the visual arts and will enlighten all who are interested in the

complex intellectual pursuits personalities and cultural settings that connect these vast disciplines **Gems of Geometry**

John Barnes,2012-08-17 Based on a series of lectures for adult students this lively and entertaining book proves that far from being a dusty dull subject geometry is in fact full of beauty and fascination The author s infectious enthusiasm is put to use in explaining many of the key concepts in the field starting with the Golden Number and taking the reader on a geometrical journey via Shapes and Solids through the Fourth Dimension finishing up with Einstein s Theories of Relativity Equally suitable as a gift for a youngster or as a nostalgic journey back into the world of mathematics for older readers John Barnes book is the perfect antidote for anyone whose maths lessons at school are a source of painful memories Where once geometry was a source of confusion and frustration Barnes brings enlightenment and entertainment In this second edition stimulated by recent lectures at Oxford further material and extra illustrations have been added on many topics including Coloured Cubes Chaos and Crystals The Emergence of the Fourth Dimension Mark Blacklock,2018 This volume examines the

emergence of the idea of the fourth dimension in fiction of the fin de siecle and how these new theories of the possibilities of time and space influenced writers such as Joseph Conrad Ford Madox Ford H G Wells Henry James H P Lovecraft and others

Modernism's History Bernard Smith, 1998 Encompassing movements from post impressionism to post modernism eminent and widely published art historian Bernard Smith has written a sweeping history a reformulation of art history in the twentieth century The Fourth Dimension and Non-Euclidean Geometry in Modern Art, revised edition Linda Dalrymple Henderson, 2018-05-18 The long awaited new edition of a groundbreaking work on the impact of alternative concepts of space on modern art In this groundbreaking study first published in 1983 and unavailable for over a decade Linda Dalrymple Henderson demonstrates that two concepts of space beyond immediate perception the curved spaces of non Euclidean geometry and most important a higher fourth dimension of space were central to the development of modern art The possibility of a spatial fourth dimension suggested that our world might be merely a shadow or section of a higher dimensional existence That iconoclastic idea encouraged radical innovation by a variety of early twentieth century artists ranging from French Cubists Italian Futurists and Marcel Duchamp to Max Weber Kazimir Malevich and the artists of De Stijl and Surrealism In an extensive new Reintroduction Henderson surveys the impact of interest in higher dimensions of space in art and culture from the 1950s to 2000 Although largely eclipsed by relativity theory beginning in the 1920s the spatial fourth dimension experienced a resurgence during the later 1950s and 1960s In a remarkable turn of events it has returned as an important theme in contemporary culture in the wake of the emergence in the 1980s of both string theory in physics with its ten or eleven dimensional universes and computer graphics Henderson demonstrates the importance of this new conception of space for figures ranging from Buckminster Fuller Robert Smithson and the Park Place Gallery group in the 1960s to Tony Robbin and digital architect Marcos Novak **The Theosophist** ,1884 **Durée as Einstein-in-the-Heart** Candice Lee Kent, 2024-03-29 Dur e as Einstein in the Heart traces the trajectory of modernist interaction with Bergson and Einstein through the works of Virginia Woolf 1882 1941 and Mary Butts 1890 1937 It presents an overview of critical approaches that focus on time in Woolf s novels and that foreground Bergson in their analyses of Woolf It then examines how Woolf s formal experimentation and theorisation of time in Jacob s Room 1922 and Mrs Dalloway 1925 relates to Bergson s temporal theories This is followed by a discussion on the role Bergson s thinking played in the early formulation of Butts s ideas of time and an analysis of how Bergson s ideas emerge in the short story Angele au Couvent 1923 concluding by highlighting points of contrast in the engagements of Woolf and Butts The book then documents the growth of Butts s interest in Einstein s ideas and shows how she amalgamates these with Bergson s thinking in her journals and in the most intense of her fictional engagement with Einstein s ideas the novel Death of Felicity Taverner 1932 It discusses Butts s responses to the popular science genre and examines the important role played by J W N Sullivan and Arthur Eddington in the development of her understanding and interpretation of physics It concludes with a discussion of Butts s antisemitic characterisation of Kralin as purveyor of corrupted science in contrast with the Taverners who are conscious of dur e and delight in the abstractions of scientific truth **The Rise of Surrealism** Willard Bohn, 2012-02-01 In The Rise of Surrealism

Willard Bohn examines the various literary and artistic developments that prepared the way for the international Surrealist movement including Cubism Metaphysical Art and Dada as well as the triumph of Surrealism itself In an analysis that spans the first two thirds of the twentieth century Bohn surveys writers and artists from France Italy Germany Spain Argentina Mexico Chile and the United States examining both their aversion to mimesis and the solutions they devised to replace it Much of the book is concerned with competing artistic models and with different strategies for creating avant garde works and focuses on such figures as Guillaume Apollinaire Max Weber Marius de Zayas Francis Picabia Giorgio de Chirico Andr Breton J V Foix and Joan Mir The dynamics of the imagery that painters and poets chose to employ and the new roles this imagery assumed in their compositions are also discussed **The Color of Modernism** Deborah Ascher

Barnstone,2021-12-30 One of the most enduring and pervasive myths about modernist architecture is that it was white pure white walls both inside and out Yet nothing could be further from the truth The Color of Modernism explodes this myth of whiteness by offering a riot of color in modern architectural treatises polemics and buildings Focusing on Germany in the early 20th century one of modernism s most foundational and influential periods it examines the different scientific and artistic color theories which were advanced by members of the German avant garde from Bruno Taut to Walter Gropius to Hans Scharoun German color theory went on to have a profound influence on the modern movement and Germany serves as the key case study for an international phenomenon which encompassed modern architects worldwide from le Corbusier and Alvar Aalto to Berthold Lubetkin and Lina Bo Bardi Supported by accessible introductions to the development of color theory in philosophy science and the arts the book uses the German case to explore the new ways in which color was used in architecture and urban design turning attention to an important yet overlooked aspect of the period Much more than a mere correction to the historical record the book leads the reader on an adventure into the color filled worlds of psychology the paranormal theories of sensory perception and pleasure showing how each in turn influenced the modern movement The Color of Modernism will fundamentally change the way the early modernist period is seen and discussed Mathematics in
