## “How is math used in packaging candy?”

When marketing a product such as candy, how the product is packaged can be as important as how it tastes. A marketer must decide what shape container is best, how much candy the container should hold, and how much material it will take to make the chosen container. To make these decisions, you must be able to identify three-dimensional objects, calculate their volumes, and calculate their surface areas.

You will solve problems about packaging in Lesson 7-5.

**Measuring and Visualizing Space in Elementary Mathematics Learning** Richard Lehrer, Leona Schauble, 2023-03-31 Measuring and Visualizing Space in Elementary Mathematics Learning explores the development of elementary students understanding of the mathematics of measure and demonstrates how measurement can serve as an anchor for supporting a deeper understanding of number operations and rational numbers The concept of measurement is centrally implicated in a number of mathematical operations yet is not often given the placement it deserves in the elementary mathematics curriculum By drawing on K 5 classroom research authors Lehrer and Schauble have been able to

articulate a learning progression that describes benchmarks of student learning about measure in length angle area volume and rational number exploring related concepts classroom experiences and instructional practices at each stage Offering a unique research driven resource for helping students develop a deep understanding of measurement to further enhance mathematical understanding as well as further learning in other STEM disciplines the book will be relevant for scholars teacher educators and specialists in math education The book is accompanied by online resources developed for practitioners including instructional guides examples of student thinking and other teacher focused materials helping clarify how to bring concepts of measure and rational number to life in classrooms     Mathematics GLENCOE,1995     *Glencoe Mathematics*
