

THE PHILOSOPHY OF MATHEMATICS EDUCATION: AN OVERVIEW¹

Paul Ernest

ABSTRACT

This chapter offers an overview of the philosophy of mathematics education. This sub-field is characterised in both narrow and broad terms, concerning the aims of mathematics education and all philosophical aspects of research in mathematics education, respectively. The sub-field is also explored in terms of its questions and practices, which can be called a bottom-up perspective, as well as in terms of the applications of branches of philosophy to mathematics education, which might be called a top-down perspective. From the bottom-up one can characterize the area in terms of questions, and I have asked: What are the aims and purposes of teaching and learning mathematics? What is mathematics? How does mathematics relate to society? What is learning mathematics? What is mathematics teaching? What is the status of mathematics education as knowledge field? In characterizing the sub-field from a 'top down' perspective I look briefly at the contributions of ontology and metaphysics, aesthetics, epistemology and learning theory, social philosophy, ethics, and the research methodology of mathematics education. This reveals both how rich and deep the contributions of philosophy are to the theoretical foundations of our field of study. But even these different approaches leave many questions unanswered. For example: what are the responsibilities of mathematics and what is the responsibility of our own subfield, the philosophy of mathematics education? I conclude that the role of the philosophy of mathematics education is to analyse, question, challenge, and critique the claims of mathematics education practice, policy and research.

INTRODUCTION: WHAT IS THE PHILOSOPHY OF MATHEMATICS EDUCATION?

In the past quarter century the philosophy of mathematics education has emerged as a loosely defined area of research, primarily concerned with the philosophical aspects of mathematics education. This chapter aims to briefly map out some of its terrain, and attempt a synoptic vision of the breadth and depth of this area. This will prepare the ground for the more detailed and specific enquiries in the chapters that follow. This task is made all the more urgent as the question of what constitutes the philosophy of mathematics education is not without ambiguity and multiple answers. For example, is the philosophy of mathematics education a particular, specific approach to mathematics teaching and learning or to mathematics education research? The definite article might be taken to imply a claim for the definitiveness of the account, namely, that a unique philosophy, rationale or direction is proposed. This is not what is intended here, and 'the' is meant to indicate a definite area of enquiry, a specific domain, not a single fixed ideological perspective. Thus, *the* philosophy of mathematics education is not a dominant interpretation but rather a particular, if not completely defined, area of study and investigation, a sub-specialism within mathematics education.

Mathematics Education And Philosophy:

Mathematics Education and Philosophy Paul Ernest, 2003-09-02 Currently there is a great deal of interest in philosophical issues in the teaching and learning of both mathematics and science education In this book Ernest has collected together papers from the foremost researchers and practitioners in the philosophy of mathematics education and related areas together with a selection of papers from the International Congress of Mathematics Education held in Quebec in 1992 Throughout the outstanding feature of the collection is its multidisciplinary approach to the field of study This book is the second in Paul Ernest's Studies in Mathematics Education series The Philosophy of Mathematics Education Paul

Ernest, 2002-11-01 Although many agree that all teaching rests on a theory of knowledge there has been no in depth exploration of the implications of the philosophy of mathematics for education This is Paul Ernest's aim Building on the work of Lakatos and Wittgenstein it challenges the prevalent notion that mathematical knowledge is certain absolute and neutral and offers instead an account of mathematics as a social construction This has profound educational implications for social issues including gender race and multiculturalism for pedagogy including investigations and problem solving and challenges hierarchical views of mathematics learning and ability Beyond this the book offers a well grounded model of five educational ideologies each with its own epistemology values aims and social group of adherents An analysis of the impact of these groups on the National Curriculum results in a powerful critique revealing the questionable assumptions values and interests upon which it rests The book finishes on an optimistic note arguing that pedagogy left unspecified by the National Curriculum is the way to achieve the radical aims of educating confident problem posers and solvers who are able to critically evaluate the social uses of mathematics **Philosophical Dimensions in Mathematics Education** Karen

Francois, Jean Paul Van Bendegem, 2007-11-15 This book brings together diverse recent developments exploring philosophy of mathematics in education The unique combination of ethnomathematics philosophy history education statistics and mathematics offers a variety of different perspectives from which existing boundaries in mathematics education can be extended The ten chapters in this book offer a balance between philosophy of and philosophy in mathematics education Attention is paid to the implementation of a philosophy of mathematics within the mathematics curriculum to become a philosophy in mathematics education In doing so many chapters provide ideas for actual practice and some practical examples directly usable in teacher training and in mathematics classrooms **Towards a Philosophy of Critical**

Mathematics Education Ole Skovsmose, 2013-03-09 In Nineteen Eighty Four George Orwell gives a description of different forms of suppression We learn about the telescreens placed everywhere through which it is possible for Big Brother to watch the inhabitants of Oceania However it is not only important to control the activities of the inhabitants it is important as well to control their thoughts and the Thought Police are on guard This is a very direct form of monitoring and control but Orwell also outlines a more imperceptible and calculated line of thought control In the Appendix to Nineteen Eighty Four Orwell

explains some structures of Newspeak which is going to become the official language of Oceania Newspeak is being developed by the Ministry of Truth and this language has to substitute Oldspeak similar to standard English Newspeak should fit with the official politics of Oceania ruled by the Ingsoc party The purpose of Newspeak was not only to provide a medium of expression for the world view and mental habits proper to the devotees of Ingsoc but to make all other modes of thought impossible It was intended that when Newspeak had been adopted once and for all and Oldspeak forgotten a heretical thought that is a thought diverging from the principles of Ingsoc should be literally unthinkable at least as far as thought is dependent on words *Philosophy of Mathematics Education* , **The Philosophy of Mathematics Education**

Today Paul Ernest,2018-06-09 This book offers an up to date overview of the research on philosophy of mathematics education one of the most important and relevant areas of theory The contributions analyse question challenge and critique the claims of mathematics education practice policy theory and research offering ways forward for new and better solutions The book poses basic questions including What are our aims of teaching and learning mathematics What is mathematics anyway How is mathematics related to society in the 21st century How do students learn mathematics What have we learnt about mathematics teaching Applied philosophy can help to answer these and other fundamental questions and only through an in depth analysis can the practice of the teaching and learning of mathematics be improved The book addresses important themes such as critical mathematics education the traditional role of mathematics in schools during the current unprecedented political social and environmental crises and the way in which the teaching and learning of mathematics can better serve social justice and make the world a better place for the future Social Constructivism as a Philosophy of Mathematics Paul Ernest,1997-11-20 Proposing social constructivism as a novel philosophy of mathematics this book is inspired by current work in sociology of knowledge and social studies of science It extends the ideas of social constructivism to the philosophy of mathematics developing a whole set of new notions The outcome is a powerful critique of traditional absolutist conceptions of mathematics as well as of the field of philosophy of mathematics itself Proposed are a reconceptualization of the philosophy of mathematics and a new set of adequacy criteria The book offers novel analyses of the important but under recognized contributions of Wittgenstein and Lakatos to the philosophy of mathematics Building on their ideas it develops a theory of mathematical knowledge and its relation to the social context It offers an original theory of mathematical knowledge based on the concept of conversation and develops the rhetoric of mathematics to account for proof in mathematics Another novel feature is the account of the social construction of subjective knowledge which relates the learning of mathematics to philosophy of mathematics via the development of the individual mathematician It concludes by considering the values of mathematics and its social responsibility *Ongoing Advancements in Philosophy of Mathematics Education* Maria Aparecida Viggiani Bicudo,Bronislaw Czarnocha,Maurício Rosa,Małgorzata Marciniak,2023-09-30 Ongoing Advancements in Philosophy of Mathematics Education approaches the philosophy of mathematics education in a forward

Perspectives on Mathematical Practices Bart van Kerkhove,jean paul van bendegem,2007-06-01 Philosophy of mathematics today has transformed into a very complex network of diverse ideas viewpoints and theories Sometimes the emphasis is on the classical foundational work often connected with the use of formal logical methods sometimes on the sociological dimension of the mathematical research community and the products it produces then again on the education of

future mathematicians and the problem of how knowledge is or should be transmitted from one generation to the next The editors of this book felt the urge first of all to bring together the widest variety of authors from these different domains and secondly to show that this diversity does not exclude a sufficient number of common elements to be present In the eyes of the editors this book will be considered a success if it can convince its readers of the following that it is warranted to dream of a realistic and full fledged theory of mathematical practices in the plural If such a theory is possible it would mean that a number of presently existing fierce oppositions between philosophers sociologists educators and other parties involved are in fact illusory
