**Boundaries of Adult Learning** Richard Edwards, Ann

Hanson, Peter Raggatt, 2013-09-13 Until relatively recently adult learning in the UK was largely recognised as being situated mainly within the LEA adult education centre university extra mural departments and the WEA However this picture has changed The major change has been a shift from education to learning as the key organising concept A greater range of settings are now recognised as sites producing learning and alongside this has grown a debate about the purpose and form of study within adult learning This has led people to question both the concept of adult learning and the boundaries of its provision This book reviews and assesses the changes which are taking place It explores the disputes surrounding adult learning discussing how boundaries have blurred thereby creating new opportunities such as APL and credit transfer and including a significantly wider range of activities within the definition of learning It also assesses the extent to which despite the changes in boundaries inequalities in learning opportunities still persist

**Mathematical Subjects** Fiona Walls, 2009-08-10 Teaching and learning mathematics is a political act in which children teachers parents and policy makers are made visible as subjects As they learn about mathematics children are also learning about themselves who they are who they might become We can choose to listen or not to what children have to say about learning mathematics Such choices constitute us in relations of power Mathematical know how is widely regarded as essential not only to the life chances of individuals but also to the health of communities and the economic well being of nations With the globalisation of education in an increasingly market oriented world mathematics has received intensified attention in the first decade of the twenty first century with a shifting emphasis on utilitarian aspects of mathematics This is reflected in the reconceptualisation of mathematical competence as mathematical literacy loosely conceived as those ways of thinking reasoning and working mathematically that allow us to engage effectively in everyday situations in many occupations and the cut and thrust of world economies as active empowered and participatory citizens It is no surprise then that mathematics has become one of the most politically charged subjects in primary school curricula worldwide We are experiencing an unprecedented proliferation of regional and national strategies to establish benchmarks raise standards enhance achievement close gaps and leave no child behind in mathematics education Industries have sprung up around the design administration and monitoring of standardised assessment to measure and compare children s mathematical achievement against identified benchmarks and each other

*Children's Mathematics* Elizabeth Carruthers, Maulfry Worthington, 2006-08-07 In Case Study 5 a grassroots Children's Mathematics Network group the initiative supported the participants in their professional change by giving them a space for the detailed and joint consideration of children's mathematical thinking. Another significant feature of this initiative is its focus on careful consideration and analysis of children's mathematics and the ways in which professionals can support and encourage the children's mathematical thinking and reasoning. The standard of the mathematical understanding thinking and reasoning that the displays revealed was far higher than the specified curriculum objectives for children of this age. Researching Effective CPD in Mathematics Education RECME project NCETM 2009 The review also plays great score by play based learning of a mathematical nature and makes specific recommendations regarding early mark making as a precursor to abstract mathematical symbolism. Section 115 features children's mathematical graphics and emphasises The role of mark making in children's cognitive development is set out in the taxonomy Carruthers and Worthington 2006. The report recommends that local authorities leaders managers and head teachers should provide a culture with a significant focus on mathematical mark making and a learning environment that encourages children to choose to use their own mathematical graphics to support their mathematical thinking and processes. The Williams Maths Review DCSF 2008 At the very heart of the success of the book is the authors ability to see mathematics through young children's eyes by listening to and reflecting on the constant efforts made by children to make sense of their world. This is a liberating book which proposes that the teaching of mathematics could and should be a highly creative and enjoyable process. Branwen Llewelyn Jones Early Years Consultant at PACE Ltd TACTYC Ground breaking To single out any one chapter would be unfair because there is something thought provoking and inspirational throughout. If you want to expand your understanding upwards and outwards then get a copy soon. Times Educational Supplement I first read *Children's Mathematics Making Marks Making Meaning* a couple of years ago and it had an immediate impact on my own thinking and teaching and the work I do with trainee teachers. I'm sure you will find it compelling reading too. I think it has the potential to change in a fundamental way how we think about early mathematical development. Lynne McClure Editor.

Math Coordinator's File Mathematics Association In their exceptionally readable and informative book *Children's Mathematics Making Marks Making Meaning* Carruthers and Worthington 2006 draw attention to one of the main goals of early years teaching that is to help children make links between the mathematics they have already encountered and continue to engage with at home and the more abstract mathematics of the school These authors suggest that by encouraging children to represent mathematical ideas in their own ways and crucially by talking to the pupils about the marks they have made we are given a window onto their thinking that may otherwise be inaccessible Liz Pumphrey NRICH This book draws on the authors many years of teaching children aged three to eight years and also on their extensive research with children in the home nursery and school The authors explain the development and range of young children's mathematical marks and visual representations showing how children make mental connections between their own early marks and subsequent abstract mathematical symbolism and go on to develop their own written methods Combining theory and practice this acclaimed book demonstrates how children's own mathematical graphics are highly creative and show deep levels of thinking The authors show how this is the key to success in school mathematics and to higher levels of achievement The authors are winners of TACTYC's 2003 Jenefer Joseph Award for the Creative Arts 3-8 awarded for their innovative work with children on mathematical graphics
