## Measurement, Chance and Data

Develop an interest in maths through the use of the series as an intervention in 'at-risk' students, as well as providing students with a learning resource covering all mathematical concepts through stimulating lesson plans and tasks.

Students with Special Learning Difficulties experience a range of problems with their learning at home. These children may not have developed the appropriate 'learning' skills that are the natural outcome of their existing experiences. They require targeted, individualized strategies to ensure that they can access the material, process information and undertake tasks involving reasoning. These children need appropriate aids and resources.

These ten lessons have been designed for students with learning difficulties, who may be unable to attend the appropriate mainstream or an alternative environment of education designed for the same level. The programme is laid out as a 10-lesson course covering a number of mathematical concepts through a range of tasks.

At the end of the ten lessons the student achieves:

1. An understanding of chance, counting, addition, subtraction, multiplication and division, using a range of mathematical strategies to solve problems.
2. An understanding of probability, using a range of mathematical strategies to solve problems.
3. An understanding of data, using a range of mathematical strategies to solve problems.
4. An understanding of measurement, using a range of mathematical strategies to solve problems.

**Data Analytics** Vladimir Shikhman, David Müller, 2021-02-11 In this textbook basic mathematical models used in Big Data Analytics are presented and application oriented references to relevant practical issues are made Necessary mathematical tools are examined and applied to current problems of data analysis such as brand loyalty portfolio selection credit investigation quality control product clustering asset pricing etc mainly in an economic context In addition we discuss

interdisciplinary applications to biology linguistics sociology electrical engineering computer science and artificial intelligence For the models we make use of a wide range of mathematics from basic disciplines of numerical linear algebra statistics and optimization to more specialized game graph and even complexity theories By doing so we cover all relevant techniques commonly used in Big Data Analytics Each chapter starts with a concrete practical problem whose primary aim is to motivate the study of a particular Big Data Analytics technique Next mathematical results follow including important definitions auxiliary statements and conclusions arising Case studies help to deepen the acquired knowledge by applying it in an interdisciplinary context Exercises serve to improve understanding of the underlying theory Complete solutions for exercises can be consulted by the interested reader at the end of the textbook for some which have to be solved numerically we provide descriptions of algorithms in Python code as supplementary material This textbook has been recommended and developed for university courses in Germany Austria and Switzerland

**Twenty-one Mental Models That Can Change Policing** Renée J. Mitchell, 2021-09-16 This book goes beyond other police leadership books to teach practitioners how to think about policing in a structured way that synthesizes criminological theory statistics research design applied research and what works and what doesn't in policing into Mental Models A Mental Model is a representation of how something works Using a Mental Model framework to simplify complex concepts readers will take away an in depth understanding of how cognitive biases affect our ability to understand and interpret data what empirical research says about effective police interventions how statistical data should be structured for management meetings and how to evaluate interventions for efficiency and effectiveness While evidence based practice is critical to advancing the police profession it is limited in scope and is only part of what is necessary to support sustainable change in policing Policing requires a scientifically based framework to understand and interpret data in a way that minimizes cognitive bias to allow for better responses to complex problems Data and research have advanced so rapidly in the last several decades that it is difficult for even the most ambitious of police leaders to keep pace The Twenty one Mental Models were synthesized to create a framework for any police public or community leader to better understand how cognitive bias contributes to misunderstanding data and gives the reader the tools to overcome those biases to better serve their communities The book is intended for a wide range of audiences including law enforcement and community leaders scholars and policy experts who specialize in policing students of criminal justice organizations and management reporters and journalists individuals who aspire to police careers and citizen consumers of information about policing Anyone who is going to make decisions about their communities based on data has a responsibility to be numerate and this book Twenty one Mental Models That Can Change Policing A Framework For Using Data and Research For Overcoming Cognitive Bias will help you become just that

Scientific and Technical Aerospace Reports ,1985      Mathematical Modeling and Simulation Kai Velten, 2009-06-01 This concise and clear introduction to the topic requires only basic knowledge of calculus and linear algebra all other concepts and ideas are

developed in the course of the book. Lucidly written so as to appeal to undergraduates and practitioners alike, it enables readers to set up simple mathematical models on their own and to interpret their results and those of others critically. To achieve this, many examples have been chosen from various fields such as biology, ecology, economics, medicine, agricultural, chemical, electrical, mechanical, and process engineering, which are subsequently discussed in detail. Based on the author's modeling and simulation experience in science and engineering and as a consultant, the book answers such basic questions as: What is a mathematical model? What types of models do exist? Which model is appropriate for a particular problem? What are simulation, parameter estimation, and validation? The book relies exclusively upon open source software, which is available to everybody free of charge. The entire book software, including 3D CFD and structural mechanics simulation software, can be used based on a free CAELinux Live DVD that is available in the Internet, works on most machines, and operating systems.

**Arduino Projects to Save the World** Emery Premeaux, Brian Evans, 2012-01-24. Arduino Projects to Save the World shows that it takes little more than a few tools, a few wires, and sensors, an Arduino board, and a bit of gumption to build devices that lower energy bills, help you grow your own food, monitor pollution in the air and in the ground, even warn you about earth tremors. Arduino Projects to Save the World introduces the types of sensors needed to collect environmental data, from temperature sensors to motion sensors. You'll see projects that deal with energy sources, from building your own power strip to running your Arduino board on solar panels, so you can actually proceed to build systems that help, for example, to lower your energy bills. Once you have some data, it's time to put it to good use by publishing it online, as you collect it. This book shows you how. The core of this book deals with the Arduino projects themselves: Account for heat loss using a heat loss temperature sensor array that sends probes into every corner of your house for maximum measurement; Monitor local seismic activity with your own seismic monitor; Keep your Arduino devices alive in the field with a solar-powered device that uses a smart power-saving design; Monitor your data and devices with a wireless radio device; place your sensors where you like without worrying about wires; Keep an eye on your power consumption with a sophisticated power monitor that records its data wherever you like. Arduino Projects to Save the World teaches the aspiring green systems expert to build environmentally sound, home-based Arduino devices, saving the world one Arduino at a time.
