*Mathematical Sciences with Multidisciplinary Applications*

Bourama Toni, 2016-08-19 This book is the fourth in a multidisciplinary series which brings together leading researchers in the STEAM H disciplines Science Technology Engineering Agriculture Mathematics and Health to present their perspective on advances in their own specific fields and to generate a genuinely interdisciplinary collaboration that transcends parochial subject matter boundaries All contributions are carefully edited peer reviewed reasonably self contained and pedagogically crafted for a multidisciplinary readership Contributions are drawn from a variety of fields including mathematics statistics game theory and behavioral sciences biomathematics and physical chemistry computer science and human centered

computing This volume is dedicated to Professor Christiane Rousseau whose work inspires the STEAM H series in recognition of her passion for the mathematical sciences and her on going initiative the Mathematics of Planet Earth paradigm of interdisciplinarity The volume s primary goal is to enhance interdisciplinary understanding between these areas of research by showing how new advances in a particular field can be relevant to open problems in another and how many disciplines contribute to a better understanding of relevant issues at the interface of mathematics and the sciences The main emphasis is on important methods research directions and applications of analysis within and beyond each field As such the volume aims to foster student interest and participation in the STEAM H domain as well as promote interdisciplinary research collaborations The volume is valuable as a reference of choice and a source of inspiration for a broad spectrum of scientists mathematicians research students and postdoctoral fellows

**Cognitive and Brain Plasticity Induced by Physical Exercise, Cognitive Training, Video Games and Combined Interventions** Soledad Ballesteros, Claudia Voelcker-Rehage, Louis Bherer, 2018-07-05 The premise of neuroplasticity on enhancing cognitive functioning among healthy as well as cognitively impaired individuals across the lifespan and the potential of harnessing these processes to prevent cognitive decline attract substantial scientific and public interest Indeed the systematic evidence base for cognitive training video games physical exercise and other forms of brain stimulation such as entrain brain activity is growing rapidly This Research Topic RT focused on recent research conducted in the field of cognitive and brain plasticity induced by physical activity different types of cognitive training including computerized interventions learning therapy video games and combined intervention approaches as well as other forms of brain stimulation that target brain activity including electroencephalography and neurofeedback It contains 49 contributions to the topic including Original Research articles 37 Clinical Trials 2 Reviews 5 Mini Reviews 2 Hypothesis and Theory 1 and Corrections 2

Medical Image Computing and Computer-Assisted Intervention - MICCAI 2003 Randy E. Ellis, Terry M. Peters, 2003-10-29

The 6th International Conference on Medical Imaging and Computer Assisted Intervention MICCAI2003 was held in Montreal Quebec Canada at the Fairmont Queen Elizabeth Hotel during November 15-18, 2003. This was the first time the conference had been held in Canada. The proposal to host MICCAI 2003 originated from discussions within the Ontario Consortium for Image Guided Therapy and Surgery, a multi-institutional research consortium that was supported by the Government of Ontario through the Ontario Ministry of Enterprise, Opportunity and Innovation. The objective of the conference was to offer clinicians and scientists a forum within which to exchange ideas in this exciting and rapidly growing field. MICCAI 2003 encompassed the state of the art in computer-assisted interventions, medical robotics, and medical image processing, attracting experts from numerous multidisciplinary professions that included clinicians and surgeons, computer scientists, medical physicists, and mechanical, electrical, and biomedical engineers. The quality and quantity of submitted papers were most impressive. For MICCAI 2003, we received a record 499 full submissions and 100 short communications. All full submissions of 8 pages each were reviewed by up to 5 reviewers, and the 2-page contributions were assessed by a small subcommittee of the Scientific Review Committee. All reviews were then considered by the MICCAI 2003 Program Committee, resulting in the acceptance of 206 full papers and 25 short communications. The normal mode of presentation at MICCAI 2003 was as a poster; in addition, 49 papers were chosen for oral presentation.

**Potential biomarkers in neurovascular disorders** John Zhang, 2023-05-05

**Neuroimaging of Affective Empathy and Emotional Communication** Argye E. Hillis, Katherine P. Rankin, 2019-02-08. A recent explosion of research, both with neurotypical adults and individuals with brain lesions, has been devoted to delineating the auditory, cognitive, and motor processes underpinning affective empathy and emotional communication. This Research Topic highlights this line of investigation by bringing together a methodologically diverse range of neuroimaging studies that further advance our knowledge of the precise neural mechanisms by which these critical aspects of human interaction are accomplished, how they break down after brain damage, and how they recover, laying the groundwork for developing effective interventions for people with deficits in these functions.

*Advances in Research on Age in the Workplace and Retirement* Cort W.

Rudolph, Hannes Zacher, Susanne Scheibe, 2018-01-16 Shifts in the age composition of the workforce coupled with dynamic definitions of retirement represent important issues that influence work processes and more generally the experience of working across one's career. For example, redefinitions of careers and the changing nature of working have contributed to the emergence of distinct forms and patterns of work experiences across the prototypical work lifespan. Likewise, older individuals are increasingly delaying retirement in favor of longer term labor force participation. The study of age and work and work and retirement by industrial work and organizational (IWO) psychologists and scholars of human resources management and organizational behavior (HR/OB) has recently proliferated in part as a result of such trends along with the recognition that age-related processes are important indicators of various proximal (e.g., job attitudes, work behaviors, work motives) and wellbeing and distal outcomes (e.g., sustainable employability, climates for aging and firm performance) at various levels of abstraction in modern work environments. Recent theoretical advances have suggested that age along with individual psychological factors and various contextual influences can jointly influence work outcomes that contribute to long term employment success including work performance, job attitudes, work orientations and motivations. Similar theoretical developments concerning retirement have postulated individual and contextual elements that drive success in the transition from career and work roles to non work and leisure as well as post retirement bridge employment roles. In this Research Topic we aim to curate a collection of papers that are representative of current trends and advances in thinking about and investigating the role of age in workplace processes and the changing nature of retirement. Our hope is to showcase various contemporary ideas and rigorous empirical studies as a means to inform broader thinking and to support enhanced theorizing and organizational practice regarding these processes.

**Predictive Imagable Biomarkers for Brain**

**Disorders** Pravat K. Mandal, Lars Ersland, 2019-09-19 Recent research on Neurodegenerative disorders such as Alzheimer's Disease, Parkinson's Disease etc. and Neuropsychiatric disorders such as Schizophrenia has shown strong evidence that altered brain tissue structure, physiology and connectivity reflect the extent of severity of behavioral and physical abnormalities. With the advancement of high field strength MR technologies like MRS (Magnetic Resonance Spectroscopy), fMRI (functional Magnetic Resonance Imaging) and DTI (Diffusion Tensor Imaging) it has become possible to non invasively measure these changes in brain microenvironment in terms of levels of antioxidants, neurotransmitters, regional activity, susceptibility and connectivity during transition from healthy to pathological conditions and during progression of disease stages. Advanced Machine Learning (ML) and Statistical modeling algorithms are utilizing features extracted from multimodal MR based neuropsychological and neurophysiological data to build classifiers that identify highly sensitive and specific biomarkers to aid in understanding the causal processes of these brain disorders and can be translated from bench to bedside clinical practices for non invasive diagnostic testing. It is also important to have global clinical research data sharing platforms that utilize data mining and ML to identify early biomarkers and test the sensitivity of old ones from time to time.

with advancement in research This Research Topic updates the reader about the latest research in imagable biomarkers using MR methodologies and use of AI for testing the sensitivity of these biomarkers
