Matrix-isolation Techniques Ian R. Dunkin, 1998 Matrix isolation is a technique for trapping reactive species at very low temperatures and studying them spectroscopically This book offers detailed practical advice on how to carry out matrix isolation experiments and is a unique introduction to the subject Chapter 1 introduces a brief historical survey of the development of the technique that incorporates a discussion of its strength and limitations Chapter 2 provides a thorough description of the building of a matrix isolation laboratory from scratch All the necessary equipment is described in full and there are diagrammatic examples throughout In later chapters ancillary equipment for generating reactive species and an informative description of the various methods for forming low temperature matrices are dealt with There then follows a chapter on the specialized technique of matrix photochemistry with polarized light The final chapter comprises an extensive collection of classic matrix experiments which have been selected due to their ease of application and which will thus serve as useful exercises for testing new pieces of equipment This accessible text offers thorough coverage of the topic and will be invaluable to postgraduate and industrial chemists as an
