Natural Language Processing Using Very Large Corpora S. Armstrong, Kenneth W. Church, Pierre Isabelle, Sandra Manzi, Evelyne Tzoukermann, David Yarowsky, 2013-04-17 ABOUT THIS BOOK This book is intended for researchers who want to keep abreast of current developments in corpus based natural language processing It is not meant as an introduction to this field for readers who need one several entry level texts are available including those of Church and Mercer 1993 Charniak 1993 Jelinek 1997 This book captures the essence of a series of highly successful workshops held in the last few years The response in 1993 to the initial Workshop on Very Large Corpora Columbus Ohio was so enthusiastic that we were encouraged to make it an annual event The following year we staged the Second Workshop on Very Large Corpora in Kyoto As a way of managing these annual workshops we then decided to register a special interest group called SIGDAT with the Association for Computational Linguistics The demand for international forums on corpus based NLP has been expanding so rapidly that in 1995 SIGDAT was led to organize not only the Third Workshop on Very Large Corpora Cambridge Mass but also a complementary workshop entitled From Texts to Tags Dublin Obviously the success of these workshops was in some measure a reflection of the growing popularity of corpus based methods in the NLP community But first and foremost it was due to the fact that the workshops attracted so many high quality papers

Handbook of Natural Language Processing Robert Dale, Hermann Moisl, Harold Somers, 2000-07-25 This study explores the design and application of natural language text based processing systems based on generative linguistics empirical corpus analysis and artificial neural networks It emphasizes the practical tools to accommodate the selected system
