Natural Resistance Of Plants To Pests:

Natural Resistance of Plants to Pests Maurice Berkeley Green, Paul Arthur Hedin, 1986 *Natural Resistance Mechanisms of Plants to Viruses* Gad Loebenstein, John Peter Carr, 2007-05-26 Over the course of evolution most plants have acquired the ability to defend themselves against most groups of pathogens including the viruses Many antiviral resistance phenomena have been known and studied for decades but until recently understanding of their underlying mechanisms has lagged behind These phenomena include resistance to infection resistance to virus translocation through the plant recovery from infection and genetically defined resistance together with the associated phenomena of the local lesion response and induced or acquired resistance The identification and cloning of plant resistance genes characterization of downstream signaling components and especially the explosion of data regarding gene silencing mechanisms has led to rapid progress in the investigation of natural resistance phenomena Meanwhile in plant virology there has been remarkable progress in the arenas of replication movement proteins and plasmodesmatal gating and in the discovery of gene silencing suppressors Therefore it seemed timely and appropriate to link older but still important data on the well known classical resistance phenomena with the new information that has emerged during the last decade or so We hope that this book will inspire further research in this area as resistance presents the most economical and environmentally sound approach to control plant virus diseases Future technologies that emerge from this research might include an improved ability to introduce resistance genes into virus susceptible agronomically important cultivars to improve current pathogen derived resistance strategies using our new knowledge of small interfering and microRNAs or to develop targeted chemical treatments

Natural Products in Plant Pest Management N. K. Dubey, 2010-11-24 Overzealous and indiscriminate use of many synthetic pesticides during recent decades in the control of plant pests has resulted in a number of environmental and toxicological problems Reducing the release of synthetic chemicals into the environment requires that alternative sources of chemicals are developed that can be used safely in the management of plant pests Botanical antimicrobials derived from plants are currently recognised as biodegradable systemic eco friendly and non toxic to mammals and are thus considered safe Their modes of action against pests are diverse Natural compounds are well suited to organic food production in industrialised countries and can play greater roles in the protection of food crops in developing countries Some plant based antimicrobials e g neem products pyrethroids and essential oils are already used to manage pest populations on a large scale Plant scientists and agriculturists now devote significant attention to discovery and further development and formulation of novel plant products with antimicrobial activity This book is the first to bring together relevant aspects of the basic and applied sciences of natural pesticides and discussed modern trends in the use of natural products in pest management
