Natural Selection Of Populations And Communities:

The Natural Selection of Populations and Communities David Sloan Wilson, 1980 **Carbon Dioxide, Populations, and Communities** Fakhri A. Bazzaz, 1996-07-17 In past decades and in association with a continuing global industrial development the global atmospheric concentration of carbon dioxide has been rising Among the many predictions made concerning this disturbing trend is global warming sufficient to melt polar ice caps thereby dramatically altering existing shorelines This book will help fill an obvious gap in the carbon dioxide debate by substituting data for speculation Includes contributions from leading authorities around the world Serves as a companion to Carbon Dioxide and Terrestrial Ecosystems The first book of its kind to explore evolutionary responses of both populations and communities to elevated carbon dioxide *Population-Level Ecological Risk Assessment* Lawrence W. Barnhouse, Wayne R. Munns Jr., Mary T. Sorensen, 2007-09-25 Most ecological risk assessments consider the risk to individual organisms or organism level attributes From a management perspective however risks to population level attributes and processes are often more relevant Despite many published calls for population risk assessment and the abundance of available scientific research and technical tool

Luckmann, 1994-07-27 Contributed papers by experts in the field detail how to put integrated pest management to work Presents the philosophy and practice ecological and economic background as well as strategies and techniques including not only the use of chemical pesticides but also biological genetic and cultural methods to manage the harm done by insect pests Covers such key crops as cotton corn apples and forage This edition reports important advances of the last decade including an increased environmental and ecological awareness and a trend toward lower chemical pesticide use

Individual-Based Models and Approaches In Ecology D. L. DeAngelis, 2018-01-18 Until fairly recently populations were handled as homogenized averages which made modeling feasible but which ignored the essential fact that in any population there is a great variety of individuals of different ages sizes and degrees of fitness Recently because of the increased availability of affordable computer power approaches have been developed which are able to recognize individual differences Individual based models are of great use in the areas of aquatic ecology terrestrial ecology landscape or physiological ecology terrestrial ecology landscape or physiological ecology and agriculture This book discusses which biological problems individual based models can solve as well as the models inherent limitations It explores likely future directions of theoretical development in these models as well as currently feasible management applications and the best mathematical approaches and computer languages to use The book also details specific applications to theory and management

Ecological Restoration in the Midwest Christian Lenhart, Peter C. Smiley, Jr., 2018-06-01 Most people do not realize it but the Midwest has been at the forefront of ecological restoration longer than perhaps any other region in the United States dating back to the 1930s Because of its industrial history agricultural productivity and natural features such as the Great Lakes the Midwest has always faced a unique set of ecological challenges Focusing on six cutting edge case studies that highlight thirty restoration efforts and research sites throughout the region Iowa Indiana Illinois Wisconsin Michigan Minnesota and Ohio editors Christian Lenhart and Peter Rocky Smiley Jr bring together a group of scholars and practitioners to show how midwestern restoration efforts have developed as well as where they are headed Whether cleaning up contamination from auto plants in Ohio or restoring native prairie grasses along the Iowa highway the contributors uncover a vast network of interested citizens and volunteer groups committed to preserving the region's environment This study intended for researchers students and practitioners also provides an updated synthesis of restoration theory and practice and pinpoints emerging issues of importance in the Midwest such as climate change and the increase in invasive species it will

bring to the region Though focusing exclusively on the Midwest the contributors demonstrate how these case studies apply to restoration efforts across the globe Contributors Luther Aadland David P Benson Andrew F Casper Hua Chen Joe DiMisa Steve Glass Heath M Hagy John A Harrington Neil Haugerud Constance Hausman Michael J Lemke Christian Lenhart Jen Lyndall Dan Shaw John A Shuey Peter C Smiley Jr Daryl Smith **The Fungal Community** John Dighton, James F. Hagen,2021-04-13 Traces historical developments in scientific conceptions of physiology ecology behavior and evolutionary biology during the mid twentieth century Life Out of Balance focuses on a period in history when new ideas of self regulation adaptation and fitness became central to a variety of biological disciplines During the decades surrounding World War II these ideas developed in several quite different contexts and led to greater debates about the merits of such models as applied to larger systems including society at large Particularly in its later cybernetic form homeostasis seemed to provide new ways of discussing balance and regulation that avoided discredited approaches of earlier champions of vitalism and mechanism It provided a common perspective and terminology for discussing self regulating systems whether biological mechanical or social Although enormously fruitful and influential homeostatic perspectives also generated numerous controversies when critics questioned the degree to which biological systems are characterized by balance and self regulation Resolving these controversies continues to be a challenge in modern biology If natural selection constitutes the first law of biology scientists who champion homeostasis as a theoretical model claim that it is a second law equally important and closely related to the first Such claims notwithstanding homeostasis has generated a series of controversies since it was formalized by Walter Cannon in the late 1920s Critics contended that Cannon took a too optimistic view of life not only ignoring pathological deviations from normality but also failing to adequately explain the ability of living things to respond adaptively to environmental challenges Underlying these controversies was the unresolved problem of integrating physiology and other areas of functional biology with the emerging evolutionary synthesis of Mendelian genetics and Darwinian natural selection The physiological idea of homeostasis as the adaptive fit between the organism and its environment and the Darwinian idea of adaptation and fitness in terms of reproductive success might seem to be complementary in an unproblematic way but historically they have had an uneasy relationship *The Journal of Social Forces* ,1924 **Biological Reviews of the Cambridge Philosophical Society** Cambridge Philosophical Society,1925 Proceedings of the Cambridge Philosophical Society Cambridge Philosophical Society,1925 **An Introduction to the Study of Society** Frank Hamilton Hankins,1928
