From historical sociology it is shown that alcohol has also been central to the process of state formation not only as a crucial source of revenue but also through having an important role in the formation of political communities which frequently are a source of existential fear for ruling groups Tracing this contradictory position occupied by alcohol over the course of history and civilisation States of Intoxication sheds light on the manner in which it has produced the very peculiar modern perspective on alcohol

Alcohol Health and Research World, 1993 **Drug Policy and Human Nature** W.K. Bickel, R.J. DeGrandpre, 2013-11-11 The formation of drug policy is a complex phenomena influenced by a multitude of sources Among others these influences include historical factors contemporary public opinion regarding the nature and magnitude of drug use and abuse the portrayal of illicit drugs and drug use in the media and lobbying efforts by special interest groups e.g. The Drug Policy Foundation including government agencies e.g. the Justice Department and law enforcement An additional source of influence are the activities of specialists directly engaged in studying drug use and treating drug dependence This includes individuals involved in drug treatment anthropological and cultural studies policy

analyses basic psychological and pharmacological research on the epidemiology of drug use and dependence and research on prevention This influence by specialists might be usefully distinguished from those influences first mentioned for two reasons First studies of drug use and dependence attempt to uncover empirical generalizations about drugs and second because these findings are empirical there is a hope that they guide at least to some extent the actions of other forces that more directly determine drug policy Psychology as an empirical discipline has long been interested in the use of psychoactive drugs At the level of basic science in psychopharmacology a most important contribution has been the demonstration that drugs of abuse function as reinforcers and thus enter into the same psychological processes as do other appetitive stimuli
