Nature Of Research Inquiry Into Academic Contexts:

The Nature of Research Angela Brew, 2002-11 What is wrong with research today This book argues that research priorities need to be reordered to address the concerns of today's society **The Nature of Research** Angela Brew, 2002-11-01 Increasingly new academics are entering higher education without conventional research training and without a clear idea of what research actually involves This is particularly true of academics who enter from having spent time in a profession including many in the newer disciplines In addition institutions of higher education which do not have a tradition of research are increasingly competing for research funding The Nature of Research looks at this background and discusses what is wrong with academic research and discusses what is wrong with academic research today what needs to change for it to survive how to allow new kinds of research to flourish directions for future action and how academic research can teach us to live in today's complex and uncertain society The aim of the book then is to provide a stimulus to thinking about the nature and role of research with a view to considering what might be appropriate in the next century Since research is so central to university life looking at research will tell us much about what the university of the future might be like Teach Truth to Power David R. Garcia, 2022-02-08 How academics and researchers can influence education policy putting research in a policy context finding unexpected allies interacting with politicians and more Scholarly books and journal articles routinely close with policy recommendations Yet these recommendations rarely reach politicians How can academics engage more effectively in the policy process In Teach Truth to Power David Garcia offers a how to guide for scholars and researchers who want to influence education policy explaining strategies for putting research in a policy context getting in the room where policy happens finding unexpected allies interacting with politicians and more Countering conventional wisdom about research utilization also referred to as knowledge mobilization Garcia explains that engaging in education policy is not a science it is a craft a combination of acquired knowledge and intuition that must be learned through practice Engaging in policy is an interpersonal process academics who hope to influence policy have to get face to face with the politicians who create policy Garcia's experience as trusted insider researcher and political candidate make him uniquely qualified to offer a roadmap that connects research to policy He explains that academics can leverage their content expertise to build relationships with politicians even before they are politicians demonstrates the effectiveness of the research one pager and shows how academics can teach politicians to be champions of research **Synkrêtic 3** Daryl Morini, Christian Romuss, 2022-12-28 The journal Synkrêtic is an outlet for thought provoking writing on the philosophy literature and cultures of the Indo Pacific It showcases the diverse traditions of thought story telling and expression which are woven into the living tapestry of this culturally linguistically and politically complex region **Academic Research And Researchers** Brew, Angela, Lucas, Lisa, 2009-10-01 This book is concerned with how individual researchers experience and respond to this scenario It brings together research and scholarship examining the socio political context of university research and explores

how researchers' perceptions and identities are changed by political and cultural agendas for research

Cultural Compatibility in Educational Contexts Kumi Kato, 2010-02-23 *Cultural Compatibility in Educational Contexts* examines the mechanism of control and efficacy underlying specific cultural contexts, intercultural value differences and consequential conflicts which invisibly and unintentionally cause communication difficulties and negative performances. This specific study centers on Japanese language classrooms in Australia taught by native Japanese speakers. Comparative studies were carried out in classrooms in both Japan and Australia and identified specific teaching strategies perceived to be effective in each cultural context. The book concludes by asserting that the notion of culture in the educational context goes beyond ethnic and linguistic differences; an awareness of cultural compatibility should be recognized as one of the professional responsibilities of all educators. This is particularly relevant to multicultural societies such as Australia where both teaching and learning populations are increasingly diverse as well as being applicable to other social contexts. *The Routledge International Handbook of Higher Education* Malcolm Tight, Ka Ho Mok, Jeroen Huisman, Christopher Morphew, 2009-06-03 This volume is a detailed and up to date reference work providing an authoritative overview of the main issues in higher education around the world today. Consisting of newly commissioned chapters and impressive journal articles, it surveys the state of the discipline and includes the examination and discussion of emerging controversial and cutting edge areas.

The PhD at the End of the World Robyn Barnacle, Denise Cuthbert, 2021-03-02 This book addresses a world wide audience with reference to a global problem: how the PhD can serve the planet. It examines the role of the PhD in and of itself and as representative of research, the university and evidence based knowledge in relation to global crisis and the future of humanity. As such, it speaks to the scholar, the teacher, the policy maker and the administrator concerned with the role of higher education's highest award at a time of great global crisis. The approach is critical in that it offers diverse views on these issues and does not seek to privilege one single school of thought. The collected articles span theoretical reflections on key issues through to case study examples of how PhDs are being deployed and rethought to address global issues.

New Approaches to Qualitative Research Maggi Savin-Baden, Claire Howell Major, 2010-04-08 Qualitative research has seen a surge of growth during the past decade. This is in large part because positivist approaches have not yielded the kinds of results that had been anticipated and more researchers are seeking alternative perspectives to understand phenomena. The number of researchers using qualitative approaches continues to grow yet there are few up to date guides to assist thinking broadly about qualitative research as a field of inquiry. Over the decades the range of approaches has increased which has led to an even greater lack of certainty about how to think about doing qualitative research. In considering key issues while offering practical guidance on how to work within the face of uncertainty, this book will be a valuable resource to this next generation of researchers. *New Approaches to Qualitative Research* offers a clear understanding of the range of issues related to researcher stance, the way that researchers position themselves in relation to their subjects, their participants and their own belief systems and the way

in which they locate themselves across the qualitative paradigm an overview of some of the most cutting edge qualitative techniques in use today from the exploration of visual texts to the concept of inquiry to synthesis methods this section lays out the state of the art in methodology specific information regarding processes of data analysis synthesis and interpretation that are employed in these various approaches In this book the authors take the stance that qualitative research is a broad approach that encompasses and even encourages difference and uncertainty and here at last they provide a route map to this uncertain but fruitful line of inquiry This vital text is ideal for professional researchers and postgraduates in a range of subject areas

Designing for Situated Knowledge Transformation Nina Bonderup Dohn, Stig Børsen Hansen, Jens Jørgen Hansen, 2019-11-27 How can knowledge developed in one context be put to use in other contexts How can students learn to do so How can educators design for learning this These are fundamental challenges to many forms of education The challenges are amplified in contemporary society where people traverse many different contexts and where contexts themselves are continuously changing Designing for Situated Knowledge Transformation provides a structured answer to these questions through an investigation of the theoretical empirical methodological and pedagogical design aspects which they involve Raising profound questions about the nature of knowledge of situativity and of transfer transformation and resituation it calls for and provides extended empirical studies of the forms of transformation that knowledge undergoes when people find themselves in new contexts while relying on existing knowledge Considering many avenues of practical application and insight Designing for Situated Knowledge Transformation develops a coherent framework for developing learning designs for knowledge transformation that is crucial in today's educational settings
