*Ideas for a Hermeneutic Phenomenology of the Natural Sciences* Joseph J. Kockelmans, 1993-07-31 I have always had a great interest in the philosophy of science At first this interest led to reflections on the mathematical sciences I later my focus shifted to the natural sciences 2 during the past twenty years or so my interest has also included the behavioral social and historical sciences From the very start my interest was always combined with a concern for the history of the sciences In philosophy of science proper my main interest was not in logical methodological or even epistemological issues although I obviously studied and taught the most important insights proposed in the leading publications in this large field of study My concern has always been predominantly ontological and in that area I have approached the relevant issues from a 4 phenomenological perspective For what follows it is perhaps of some importance to mention here that I came to phenomenology in a rather indirect way through the philosophy of Nicolai Hartmann Yet it was mainly the influence of Herman Van Breda and Alphonse De Waelhens which led me directly to Husserl s phenomenology At first I fo cused almost exclusively on Husserl s phenomenology Later I moved in the direction of the philosophy of Merleau Ponty and 1 Cf Joseph J Kockelmans *Philosophy of Mathematics in the Middle Ages in Dutch* Langemark Vonksteen 1953 *On the Mode of Being of Mathematical Entities in Dutch* in *Tijdschrift voor Philosophie* 16 1954 pp 289 331 2 Joseph J Kockelmans *On Time and Space*

Bridgman Percy Williams Bridgman, 1952 *Philosophy of Science* Joseph Kockelmans, 2018-04-17 This anthology of selections from the works of noted philosophers affords the student an immediate contact with the unique historical background of the philosophy of science The selections many of which have not been readily accessible follow the development of the philosophy of science from 1786 to 1927 Each selection is preceded by a brief introduction by the editor designed to familiarize the reader with a particular philosopher and provide insights into his work Joseph J Kockelmans divides the selections into several sections Part 1 from 1786 to 1850 includes chapters by Immanuel Kant on the metaphysical foundations of natural science John Frederick William Herschel on experience and the analysis of phenomena William Whewell on the nature and conditions of inductive science and John Stuart Mill on induction and the law of universal

causation part 2 from 1870-1899 includes chapters by Hermann Von Helmholtz on the origin and significance of geometrical axioms William Stanley Jevons on the philosophy of inductive inference John Bernard Stallo on the kinetic theory of gasses and the conditions of the validity of scientific hypotheses Ernst Mach on the economical nature of physical inquiry Karl Pearson on perceptual and conceptual space Emile Boutroux on mechanical laws Heinrich Hertz on the appropriateness correctness and permissibility of scientific theories and Ludwig Boltzmann on the fundamental principles and basic equations of mechanics The third part covering the first decade of the twentieth century includes chapters by Henri Jules Poincare on science and reality Charles Peirce on Induction Pierre Marie Duhem on the laws of physics William Ostwald on energetism and mechanics Emile Meyerson on identity of thought and nature as the final goal of science Ernst Cassirer on functional concepts of natural science part 4 from 1910-1927 includes chapters by Charles Dunbar Broad on phenomenalism Alfred North Whitehead on time space and material Bertrand Russell on the world of physics and the world of sense Norman Robert Cambbell on the meaning of science Moritz Schlick on basic issues of the philosophy of natural science and Percy Williams Bridgman on the concepts of space time and causality Philosophy of Science provides a concise single volume text to the discipline and enables students to understand and evaluate the various trends in our contemporary philosophy of science Joseph J Kockelmans is professor emeritus of philosophy at the Pennsylvania State Univer *Working Knowledge* Joel Isaac, 2012-06-11 Isaac explores how influential thinkers in the mid twentieth century understood the relations among science knowledge and the empirical study of human affairs He places special emphasis on the practical local manifestations of their complex theoretical ideas particularly the institutional milieu of Harvard University **The Nature of the Chemical Concept** Keith S Taber, 2022-06-29 This book offers a step by step analysis and discussion of just why some students find chemistry difficult by examining the nature of chemistry concepts and how they are communicated and learnt

**The Nature of Some of Our Physical Concepts** Percy Williams Bridgman, 1980 [Nature of the Chemical Concept](#) Keith S Taber, 2019-04-29 The features of chemistry that make it such a fascinating and engaging subject to teach also contribute to it being a challenging subject for many learners Chemistry draws upon a wide range of abstract concepts which are embedded in a large body of theoretical knowledge As a science chemistry offers ideas that are the products of scientists creative imaginations and yet which are motivated and constrained by observations of natural phenomena Chemistry is often discussed and taught largely in terms of non observable theoretical entities such as molecules and electrons and orbitals which probably seem as familiar and real to a chemistry teacher as Bunsen burners and yet comprise a realm as alien and strange to many students as some learners own alternative conceptions misconceptions may appear to the teacher All chemistry teachers know that chemistry is a conceptual subject especially at the upper end of secondary school and at university level and that some students struggle to understand many chemical ideas This book offers a step by step analysis and discussion of just why some students find chemistry difficult by examining the nature of chemistry concepts and how

they are communicated and learnt The book considers the idea of concepts itself draws upon case studies of how canonical chemical concepts have developed explores how chemical concepts become represented in curriculum and in classroom teaching and discusses how conceptual learning and development occurs This book will be invaluable to anyone interested in teaching and learning and offers guidance to teachers looking to make sense of and respond to the challenges of teaching chemistry

**The Nature of Ideas** Philosophical Union of the University of California,1926 [The Concept of Nature in Science and Theology](#) Niels Henrik Gregersen,Michael W. S. **The Epistemology of Quantum Physics** Taha Sochi,2022-08-07 This book is about the epistemology of quantum physics and its interpretation as a scientific theory in its technical form The contents of the book are essentially of non formal nature although the formalism of quantum mechanics is also investigated rather briefly inline with the needs and requirements of the epistemological investigation and considerations The reader should note that a general scientific and mathematical background at the undergraduate level is required to understand the book properly and appreciate its contents The book is like my previous books in style and favorable characteristics such as clarity graduality and intensive cross referencing with hyperlinks in the electronic versions However the book unlike my previous books does not contain questions or exercises or solved problems The book is particularly useful to those who have special interest in the interpretative aspects of quantum theory and the philosophy of science although it should be useful even to those who are interested in the purely scientific and technical aspects of the quantum theory since the contents of the book should broaden the understanding of these aspects and provide them with qualitative and interpretative dimensions as well as the added benefit of the brief investigation of the formalism of quantum mechanics

**The Concept of Nature** Alfred North Whitehead, 1920 The Tarnier Lectures delivered in Trinity College November 1919

*Reality Without Realism* Arkady Plotnitsky, 2022-01-01 This book presents quantum theory as a theory based on new relationships among matter thought and experimental technology as against those previously found in physics relationships that also redefine those between mathematics and physics in quantum theory The argument of the book is based on its title concept reality without realism RWR and in the corresponding view the RWR view of quantum theory The book considers from this perspective the thinking of Bohr Heisenberg Schrödinger and Dirac with the aim of bringing together the philosophy and history of quantum theory With quantum theory the book argues the architecture of thought in theoretical physics was radically changed by the irreducible role of experimental technology in the constitution of physical phenomena accordingly no longer defined independently by matter alone as they were in classical physics or relativity Or so it appeared For quantum theory the book further argues made us realize that experimental technology beginning with that of our bodies irreducibly shapes all physical phenomena and thus makes us rethink the relationships among matter thought and technology in all of physics

**New Essays on the A Priori** Paul Boghossian, Christopher Peacocke, 2000-10-26 The topics of a priori knowledge and a priori justification have long played a prominent part in epistemology and the theory of meaning Recently there has been a surge of interest in the proper explication of these notions These newly commissioned essays by a distinguished international group of philosophers will have a substantial influence on later work in this area They discuss the relations of the a priori to meaning justification definition and ontology they consider the role of the notion in Leibniz Kant Frege and Wittgenstein and they address its role in recent discussions in the philosophy of mind Particular attention is also paid to the a priori in logic science and mathematics The authors exhibit a wide variety of approaches some remaining sceptical of the notion itself some proposing that it receive a non factualist treatment and others proposing novel ways of explicating and defending it The editors Introduction provides a helpful route into the issues
