Nature's Price Wouter van Dieren, Marius G. W. Hummelinck, Jonathan Barzdo, 1979-01-01 **Nature's Price** Wouter van Dieren, Marius G. W. Hummelinck, 1979 **Economics, Natural-Resource Scarcity and Development (Routledge Revivals)** Edward B Barbier, 2013-06-26 Global warming is an increasing problem tropical forests are being wiped out and major upper watersheds are being degraded Using insights provided by environmentalism ecology and thermo dynamics this book first published in 1989 outlines an economic approach to the use of natural resources and particularly to the problem of environmental degradation Edward Barbier reviews and critiques the long past of environmental and resource economics and then goes on to elaborate an economics which allows us to develop alternative strategies for dealing with the problems faced With examples drawn from Latin America and Indonesia he not only develops a major theoretical advance but shows how it can be applied Barbier s work is an important and relevant contribution to the discussion surrounding the economics of environmental sustainability **Accounting for Mother Nature** Terry Lee Anderson, Laura E. Huggins, Thomas M. Power, 2008 In turn the contributors explore the role that private individuals and organizations can play in protecting natural and agrarian landscapes BOOK JACKET Mother Nature's Two Laws A. D. Kirwan, 2000 Every day brings a fresh barrage of bewildering claims about science and technology How non scientists tell the difference between the hyperbole and those developments that are important With a modest amount of critical thinking an understanding of how science is practiced and a qualitative understanding of the two most sacred principles in science the first and second laws of thermodynamics anyone can make the distinction Critical thinking and the practice of science are not emphasized in undergraduate science courses for non scientists while exposure to the first and second laws is usually reserved for physical science and engineering majors This book introduces non scientists to these topics and provides detailed applications to a variety of topics The Crisis of Global Environmental Governance Jacob Park, Ken Conca, Matthias Finger, 2008-03-27 Taking a critical perspective and providing a comprehensive framework on globalization and governance this book examines what institutional mechanisms and arrangements will enable people to achieve sustainable environmental governance Natural Resource Valuation and Policy in Brazil Peter H. May, 2000-01-11 Brazil s environmental problems especially Amazon deforestation have attracted considerable attention particularly in the developed world Peter May brings a sharper and more critical focus to bear on this topic by offering a general overview and seven microeconomic case studies on particular problems in the Brazilian environment Focusing on discrete resource problems at a subnational scale this practical book shows how work at the state and local level can lead to more sustainable development policies not only in Brazil but also in many other developing nations Uniting specific Brazilian applications of more general principles of natural resource and environmental valuation to support policy making for land use and economic development Natural Resource Valuation and Policy in Brazil shows how such methods support efforts to incorporate environmental concerns in decision making processes Nature's Economy

SATVINDER K MANN,2020-10-05 This book briefly traces how the living systems emerged on the earth created the biosphere and a cyclic energy regime of nature s economy over the geological time scale Whereas in a short span of a few centuries the productive industrial agricultural apparatus has depleted and exhausted the natural resources compromised the quality of human food and marginalized the dominant human community the small and marginal farmers In the concluding chapters ways and means to reconceptualize agriculture to sort out its relationship with nature are highlighted

Around the World in 80 Species Jill Atkins,Barry Atkins,2018-11-08 The world is currently experiencing a sixth period of mass species extinction and extinction of flora and fauna is caused by a variety of factors arising from industrial activity and increasing human population such as global warming climate change habitat loss pollution and use of pesticides Most causes of extinction are linked to corporate activity either directly or indirectly Around the World in 80 Species Exploring the Business of Extinction responds to the ongoing mass extinction crisis engulfing our planet by exploring the ways in which accounting business and finance can be used to prevent species extinctions From Africa to the Far East and from Europe to the Americas the authors explore species loss and how businesses can stop mass extinctions through greater transparency and through closer engagement with their investors and wildlife organisations The book concludes that global capitalism has led us to this extinction crisis and that therefore the mechanisms of capitalism namely accounting finance investment can help to pull us out Businesses must urgently address extinction before it is too late for all species including ourselves As the first book to explore corporate accounting and accountability in relation to species on the brink of extinction this book will be of great interest to both professionals and a wider audience interested in the causes and prevention of extinction **The**
