Network Performance Modeling and Simulation Jean Walrand, Kallol Bagchi, George Zobrist, 2019-08-16 This book makes the argument that performance modeling and simulation have become central issues in computer science and engineering in part due to applications to the structures comprising the Internet Dealing primarily with theory tools and techniques as related to communications systems the volume provides tutorials and surveys and relates new important research results Each chapter presents background information describes and analyzes important work done in the field and provides direction to the reader on future work and further readings The topics covered include traffic models for ATM networks simulation environments analytical methods interprocessor communications and an evaluation of process architectures

Artificial Intelligence Applications and Innovations II Daoliang Li, Baoji Wang, 2006-03-11 Artificial Intelligence is one of the oldest and most exciting subfields of computing covering such areas as intelligent robotics intelligent planning and scheduling model based reasoning fault diagnosis natural language processing machine translation knowledge representation and reasoning knowledge based systems knowledge engineering intelligent agents machine learning neural nets genetic algorithms and knowledge management The papers in this volume comprise the refereed proceedings of the Second International Conference on Artificial Intelligence Applications and Innovations held in Beijing China in 2005 A very promising sign of the growing importance of Artificial Intelligence techniques in practical applications is the large number of submissions received for the conference more than 150 All papers were reviewed by at least two members of the Program Committee and the best 93 were selected for the conference and are included in this volume The international nature of IFIP is amply reflected in the large number of countries represented here

Isochronous Wireless

Network for Real-time Communication in Industrial Automation Henning Trsek, 2016-02-26 This dissertation proposes and investigates an isochronous wireless network for industrial control applications with guaranteed latencies and jitter Based on a requirements analysis of real industrial applications and the characterisation of the wireless channel the solution approach is developed It consists of a TDMA based medium access control a dynamic resource allocation and the provision of a global time base for the wired and the wireless network Due to the global time base the solution approach allows a seamless and synchronous integration into existing wired Real time Ethernet systems

Designing Green Networks and Network Operations Daniel Minoli, 2011-04-25 In recent years socio political trends toward environmental responsibility and the pressing need to reduce Run the Engine RTE costs have resulted in the concept of Green IT Although a significant amount of energy is used to operate routing switching and transmission equipment comparatively less attention has been paid to Green Networking A

New methods to engineer and seamlessly reconfigure time triggered Ethernet based systems during runtime based on the PROFINET IRT example Lukasz Wisniewski, 2017-03-20 The objective of this dissertation is to design a concept that would allow to increase the flexibility of currently available Time Triggered Ethernet based TTEB systems however without affecting their performance and robustness The main challenges are related to scheduling of time triggered communication that may take significant amount of time and has to be performed on a powerful platform Additionally the reliability has to be considered and kept on the required high level Finally the reconfiguration has to be optimally done without affecting the currently running system

Optical Packet Access Protocols for WDM Networks Kemal Bengi, 2012-12-06 The fast growing traffic demand in telecommunication networks by use of the Internet and an increasing number of broadband services for multimedia communications requires new high performance networking technologies As such optical WDM networks are playing a pivotal role Wavelength Division Multiplexing WDM with many hundreds of wavelength channels per fiber is extensively being exploited in wide area networks With respect to the ongoing trend towards a completely packet switched mode of operation for all services WDM networks must be prepared accordingly This work concentrates on optical packet switched networking in local and metro area networks for realizing high performance applications like virtual reality medical imaging and supercomputing It is well known that in those networks using a star bus or ring shared medium an access protocol is necessary to guarantee controlled and fair access for all attached nodes Similar access protocols are to be developed and analyzed for WDM local and metro area networks Already many media access protocols for these networks have been described in the literature However some aspects of Quality of Service QoS for different service classes are still an open issue and subject to intensive research activities In the introduction the author Dr Kemal Bengi gives a short classification of media access protocols and network architectures for WDM local and metro area networks The need for service classes is also emphasized
