Regional Science In Developing Countries:

Regional Science in Developing Countries Manas Chatterji, Kaizong Yang, 2016-07-27 Developing countries are suffering from the multiple and overlapping problems of poverty malnutrition excessive population growth and also the increased environmental pollution due to rapid industrialization and urbanization particularly in the existing urban centres The migration from rural areas of agricultural population to urban areas is making this situation more problematic The lack of established institutions leads to the failure of public policy no matter how efficiently it is formulated The book discusses the major regional developmental problems in poor countries covering economic social and environmental problems It deals with case studies for a set of individual countries and discusses their unique problems investigating how the established methods of regional science can be used to solve some of these problems

Management and Regional Science for Economic Development Manas Chatterji, 2012-12-06 The greatest challenge facing mankind today is the immense disparity in the levels of income among people in different parts of the globe The growth rate of income of the poor countries is consistently far below the rate of the advanced industrialized

nations Due to low income and a high propensity to consume there is very little left in these countries for investment A major portion of the resources available is devoted to military expenditures This continual decline in the standard of living coupled with poverty and unemployment will lead to social and political upheaval in these countries which affects developed countries Because of high capacity and low population growth the market of the developed countries is already saturated To maintain the high standard of living in the developed countries it is necessary to have a strong and stable developing world It is gratifying to see that both groups of countries see the need for peaceful economic growth however the amount of cooperation between countries and the material help from the developed countries are far from satisfactory The economic and social scientists have investigated the best way to achieve the transformation from a poverty ridden condition to a decent existence Their studies have proceeded in two different directions One is a more descriptive historical analysis and the other is theoretical model building Although these studies have achieved a relatively high level of perfection one significant factor is sometimes missing

planning process complicated This can hardly be explored without taking a deep insight into the matter of how the regional parameters are impacting regional society or economy to shape the development of that region There can be no effective global policy framework that will be effective equally for each and every region to mitigate local issues of society or economy It is here that the book integrates the efforts of practitioners working towards addressing these regional issues and striving for sustainable regional development through their innovative ideas Through its contributions the book addresses development issues regional impact of climate change social justice migration well being livelihood vulnerabilities and regional urban environmental issues from the standpoint of regional science It is a significant resource for researchers of spatial science and policy makers

Energy, Regional Science and Public Policy M. Chatterji, P. van Rompuy, 2012-12-06 For the last three decades space has become a significant dimension in social science analysis In many developed countries economic growth is slowing down and in some cases restrained due to environmental considerations and the real question is the optimum spread of development over space rather than the growth over time In the developing countries limited and uneven distribution of population and resources and the existence of heterogeneous groups highlighted the need of balanced regional development The energy crisis and the realization that energy resources are very limited and unequally distributed have further emphasized its importance The expected impact and relocation due to energy shortages will have a crucial spatial dimension since manufacturing and service activities dependent on energy are concentrated in a few metropolitan regions connected by transportation communication and cultural factors Regional environment is also dependent on the spatial juxtaposition of activities and energy use The papers included in this volume address some of these considerations They were presented in the International Conference on Regional Science Energy and Environment held at Katholieke Universiteit te Leuven Belgium on May 1975 A second volume titled Environment Regional Science and Interregional Modeling published also by Springer Verlag contains research papers related to environment and space This book does not concern all facets of the energy situation In fact contributions on major oil producing countries U S S R East

European and developing countries are not represented *Principles of Regional Science* Zheng Wang, 2017-10-17 This book summarizes the research findings in regarding a region as a rational and abstract concept and explores the principles of regional science Focusing on location theory spatial dynamics and regional evolution theory it stresses that the region as a scientific concept is an essential abstract of an economic entity of a place While it introduces a number of case studies the content is general and universal rather than specific Beginning with location theory the basis of regional science it explains how regions breed their own characteristics as economic entities against a background of place For example it discusses the location theory of the tourism industry and analyzes issues of facility location and R D industry location theory The second part of the book addresses interactions with the spatial dynamics including the dynamic mechanism of regions against a background of space Spatial dynamics which includes concepts from statistical physics provides insights into the dynamic mechanism of aggregation diffusion and industrial clustering in regional science as well as in geography and economics The book then describes regional dynamics as a development of spatial dynamics REGION is completely independent as a research object and is no longer part of spatial dynamics This book also discusses in detail regions as the dynamic characteristics of the economy or the basic characteristics of a certain place and examines the theory of regional evolution It argues that regions are evolution and irreversible features of development with path dependence which are the characteristics of a region that differ from general economic phenomena This book by Professor Zheng Wang is outstanding Its focus on Regional Science will open this area up to a wide variety of theoretical and applied researchers I recommend the work without reservations It covers critically important principles in the field and should be read and used by students faculty and applied researchers doing policy analysis I can see this as an important handbook and reference work as well as a textbook in the field Kingsley Haynes *Tool Kits in Regional Science* Michael Sonis, Geoffrey J.
