*Advanced Regression Models with SAS and R* Olga Korosteleva, 2018-12-07 *Advanced Regression Models with SAS and R* exposes the reader to the modern world of regression analysis. The material covered by this book consists of regression models that go beyond linear regression including models for right skewed categorical and hierarchical observations. The book presents the theory as well as fully worked out numerical examples with complete SAS and R codes for each regression. The emphasis is on model accuracy and the interpretation of results. For each regression the fitted model is presented along with interpretation of estimated regression coefficients and prediction of response for given values of predictors. Features: Presents the theoretical framework for each regression. Discusses data that are categorical count proportions right skewed longitudinal and hierarchical. Uses examples based on real life consulting projects. Provides complete SAS and R codes for each example. Includes several exercises for every regression. *Advanced Regression Models with SAS and R* is designed as a text for an upper division undergraduate or a graduate course in regression analysis. Prior exposure to the two software packages is desired but not required. The Author Olga Korosteleva is a Professor of Statistics at California State University Long Beach. She teaches a large variety of statistical courses to undergraduate and master's students. She has published three statistical textbooks. For a number of years she has held the position of faculty director of the statistical consulting group. Her research interests lie mostly in applications of statistical methodology through collaboration with her clients in health sciences nursing kinesiology and other fields.

*IFRS 9 and CECL Credit Risk Modelling and Validation* Tiziano Bellini, 2019-01-31 *IFRS 9 and CECL Credit Risk Modelling and Validation* covers a hot topic in risk management. Both IFRS 9 and CECL accounting standards require Banks to adopt a new perspective in assessing Expected Credit Losses. The book explores a wide range of models and corresponding validation procedures. The most traditional regression analyses pave the way to more innovative methods like machine learning survival analysis and competing risk modelling. Special attention is then devoted to scarce data and low default portfolios. A practical approach inspires the learning journey. In each section the theoretical dissertation is accompanied by Examples and Case Studies worked in R and SAS the most widely used software packages used by practitioners in Credit Risk Management.

**Categorical Data Analysis and Multilevel Modeling Using R** Xing Liu, 2022-02-24 *Categorical Data Analysis and Multilevel Modeling Using R* provides a practical guide to regression techniques for analyzing binary ordinal nominal and count response variables using the R software. Author Xing Liu offers a unified framework for both single level and multilevel modeling of categorical and count response variables with both frequentist and Bayesian approaches. Each chapter demonstrates how to conduct the analysis using R how to interpret the models and how to present the results for publication. A companion website for this book contains datasets and R commands used in the book for students and solutions for the end of chapter exercises on the instructor site.

Bayesian Analysis of Time Series Lyle D. Broemeling, 2019-04-16 In many branches of science relevant observations are taken sequentially over time Bayesian Analysis of Time Series discusses how to use models that explain the probabilistic characteristics of these time series and then utilizes the Bayesian approach to make inferences about their parameters This is done by taking the prior information and via Bayes theorem implementing Bayesian inferences of estimation testing hypotheses and prediction The methods are demonstrated using both R and WinBUGS The R package is primarily used to generate observations from a given time series model while the WinBUGS packages allows one to perform a posterior analysis that provides a way to determine the characteristic of the posterior distribution of the unknown parameters Features Presents a comprehensive introduction to the Bayesian analysis of time series Gives many examples over a wide variety of fields including biology agriculture business economics sociology and astronomy Contains numerous exercises at the end of each chapter many of which use R and WinBUGS Can be used in graduate courses in statistics and biostatistics but is also appropriate for researchers practitioners and consulting statisticians About the author Lyle D Broemeling Ph D is Director of Broemeling and Associates Inc and is a consulting biostatistician He has been involved with academic health science centers for about 20 years and has taught and been a consultant at the University of Texas Medical Branch in Galveston The University of Texas MD Anderson Cancer Center and the University of Texas School of Public Health His main interest is in developing Bayesian methods for use in medical and biological problems and in authoring textbooks in statistics His previous books for Chapman Hall CRC include Bayesian Biostatistics and Diagnostic Medicine and Bayesian Methods for Agreement Business
