A Historical Perspective on Evidence-Based Immunology Edward J. Moticka,2015-11-25 A Historical Perspective on Evidence Based Immunology focuses on the results of hypothesis driven controlled scientific experiments that have led to the current understanding of immunological principles The text helps beginning students in biomedical disciplines understand the basis of immunologic knowledge while also helping more advanced students gain further insights The book serves as a crucial reference for researchers studying the evolution of ideas and scientific methods including fundamental insights on immunologic tolerance interactions of lymphocytes with antigen TCR and BCR the generation of diversity and mechanism of tolerance of T cells and B cells the first cytokines the concept of autoimmunity the identification of NK cells as a unique cell type the structure of antibody molecules and identification of Fab and Fc regions and dendritic cells Provides a complete review of the hypothesis driven controlled scientific experiments that have led to our current understanding of immunological principles Explains the types of experiments that were performed and how the interpretation of the experiments altered the understanding of immunology Presents concepts such as the division of lymphocytes into functionally different populations in their historical context Includes fundamental insights on immunologic tolerance interactions of lymphocytes with antigen TCR and BCR and the generation of diversity and mechanism of tolerance of T and B cells

Animal Biotechnology L.A. Babiuk,J.P. Phillips,Murray Moo-Young,2013-10-22 The advent of biotechnology has the potential to develop a variety of novel or better quality products for the treatment of a large number of diseases in livestock In addition as we understand more about the reproductive physiology of animals the potential exists to dramatically increase the productivity of animals through better therapeutics and diagnostics for the control of many infectious diseases Productivity can also be increased through animal breeding strategies including gene transfer micromanipulation of embryos and gamete sex selection As well as being a valuable reference to current knowledge in these areas this first supplement to Comprehensive Biotechnology also looks at societal concerns over the use of antibiotics and chemical residues in meat and milk products which are forcing biotechnologists to investigate more natural means of controlling infection by stimulating the animal s own immune system to combat infection The identification of a variety of cytokines which are involved in regulating immune responses provides opportunities to use the animal s natural defence mechanisms to combat many infections or increase the animal s resistance to such infections These approaches should

Tailoring NK Cell Receptor-Ligand Interactions: an Art in Evolution, 2nd Edition Ulrike Koehl,Antoine Toubert,Gianfranco Pittari,2018-11-13 Recognition and killing of aberrant infected or tumor targets by Natural Killer NK cells is mediated by positive signals transduced by activating receptors upon engagement of ligands on target surface These stimulatory pathways are counterbalanced by inhibitory receptors that raise NK cell activation threshold through negative antagonist signals While regulatory effects are necessary for physiologic control of autoimmune aggression they may restrain the ability of NK cells to activate against disease Overcoming this barrier to immune surveillance multiple approaches to enhance NK mediated responses are being investigated since two decades Propelled by considerable advances in the understanding of NK cell biology these studies are critical for effective translation of NK based immunotherapy principles into the clinic In humans dominant inhibitory signals are transduced by Killer Immunoglobulin Like Receptors KIR recognizing cognate HLA class I on target cells Conversely KIR recognition of missing self HLA due to HLA loss or HLA KIR mismatch triggers NK mediated tumor rejection Initially observed in murine transplant models these antitumor effects were later found to have important implications for the clinical outcome of haplotype mismatched stemcell transplantation Here donor NK subsets protect against acute myeloid leukemia AML relapse through missing self recognition of donor HLA C allele groups C1 or C2 and or Bw4 epitope These studies were subsequently extended by trials investigating the antileukemia effects of adoptively transferred haplotype mismatched NK cells in non transplant settings Other mechanisms have been found to induce clinically relevant NK cell alloreactivity in transplantation e g post reconstitution functional reversal of anergic NK cells More recently activating KIR came into the spotlight for their potential ability to directly activate donor NK cells through in vivo recognition of HLA or other ligands Novel therapeutic monoclonal antibodies mAb may optimize NK mediated effects Examples include obinutuzumab GA101 a glyco engineered anti CD20 mAb with increased affinity for the Fc RIIIA receptor enhancing antibody dependent cellular cytotoxicity lirilumab IPH2102 a first in class NK specific checkpoint inhibitor blocking the interaction between the major KIR and cognate HLA C antigens and elotuzumab HuLuc63 a humanized monoclonal antibody specific for SLAMF7 whose anti myeloma therapeutic effects are partly due to direct activation of SLAMF7 expressing NK cells In addition to conventional antibodies NK cell targeted bispecific BiKEs and trispecific TriKEs killer engagers have also been developed These proteins elicit potent effector functions by binding target ligands e g CD19 CD22 CD30 CD133 HLA class II EGFR on one arm and NK receptors on the other An additional innovative approach to direct NK cell activity is genetic reprogramming with chimeric antigen receptors CAR To date primary NK cells and the NK92 cell line have been engineered with CAR specific for antigens expressed on multiple tumors Encouraging preclinical results warrant further development of this approach This Research Topic welcomes contributions addressing mechanisms of NK mediated activation in response to disease as well as past and contemporary strategies to enhance NK mediated reactivity through control of the interactions
