Powell Lawton,2013-11-27 **And a Time to Die** Sharon Kaufman,2005-04-19 A reassuring and illuminating examination on our conflicting wishes about the end of life how the politics and routines of the American hospital have formed our understanding and experience of death and ultimately why what we consider a good death is so hard to attain In a penetrating and revelatory study medical anthropologist Dr Sharon Kaufman uses two years of intensive observations and interviews with scores of patients family members physicians nurses social workers and other staff at several community hospitals in California to explore the heart of a science driven yet fractured and often irrational world of health care delivery where empathetic yet frustrated hard working yet constrained professionals both respond to and create the anxieties and often inchoate expectations of patients and families who must make decisions they are ill prepared to make She sought out the critically ill the dying and their friends and relatives She

followed patients from admission to death days weeks or sometimes months later through what is often for them and their families a Kafka esque journey She asked hospital staff what they were doing and why and stood beside doctors and nurses observing their work cynicism compassion and frustration And she paid close attention to the most important player of all the hospital bureaucracy and how it impacts the manner and timing of patient death Her investigative research links together the emotional experiences of patients and families the dedicated work of hospital staff and the ramifications of institutional bureaucracy to show the invisible power of the hospital system itself its rules mandates and daily activity in organizing death and individual experience of it The book is the story of real patients and their families an account of what drives the American hospital today and a report on the complex sources and implications of doing something about death

Anti-aging Drugs Alexander M Vaiserman, 2017-02-01 Aging is a natural phenomenon that is peculiar to all living things However accumulating findings indicate that senescence could be postponed or prevented by certain approaches Substantial evidence has emerged supporting the possibility of radical human health and lifespan extension in particular through pharmacological modulation of aging A number of natural dietary ingredients and synthetic drugs have been assumed to have geroprotective potential In the development of anti aging therapeutics several cell insect and animal models may provide useful starting points prior to human studies This book provides an overview of current research aimed to search for life extending medications and describes pharmacological aspects of anti aging medicine Readers are introduced to the fascinating historical background of geroprotection in the first chapter In depth information on models for investigating geroprotective drugs precedes a section covering anti aging properties of pharmaceutical compounds such as calorie restriction mimetics autophagy inducers senolytics and mitochondrial antioxidants Finally strategies to translate discoveries from aging research into drugs and healthcare policy perspectives on anti ageing medicine are provided to give a complete picture of the field A timely and carefully edited collection of chapters by leading researchers in the field this book will be a fascinating and useful resource for pharmacologists gerontologists and any scientifically interested person wishing to know more about the current status of research into anti aging remedies challenges and opportunities Neuroimaging

Current Catalog National Library of Medicine (U.S.), *Age-associated Neurological Diseases* Lüder Deecke, Peter Dal-Bianco, 2013-03-13 The papers compiled in this supplementum are a selection of the best contributions presented at the 19 Central European Neurological Symposium CNS 19 held on June 29 July 1 1989 in Vienna The main topic of this conference was degenerative

and age associated neurological diseases In recent decades life expectancy has dramatically increased at least in the industrialized countries This has led to extreme distortions of the so called population pyramids that no longer look like such but begin to almost resemble cylinders As a consequence of this overaging of the population diseases that are associated with age have become much more common than before It was thus more than reasonable to devote a congress of the CNS series to these important neurological diseases The following fields of interest are covered Age associated memory impairment AAMI Alzheimer s and other dementias Parkinson s disease and other movement disorders stroke and others Concerning the de men tias some papers deal with diagnosis employing neuro imaging methods such as MRI CT PET and SPECT others using electrophysiological methods An important aspect in the early preclinical diagnosis of dementia is the inclusion of neuropsychological tests to enhance the chance of effec tive early treatment Also drugs that are now under clinical investigation are discussed and preliminary results are presented

GHRH, GH, and IGF-I Marc R. Blackman, S. Mitchell Harman, Jesse Roth, Jay R. Shapiro, 1995-06-02 Recent research suggests that adult growth hormone GH deficiency whether of pathological or physiological origin is associated with a dis tinct syndrome that includes alterations in body composition endocrine metabolic function immune competence and physical and psychosocial well being Not surprisingly substantial investigative effort is currently focused on validating the above hypothesis and on determining whether restoration of a normal GH IGF I axis in various states of adult GH deficiency is clinically useful safe and cost beneficial This book contains the proceedings from the Symposium on GHRH GH and IGF I Basic and Clinical Advances held December 9 to 12 1993 in San Diego California and sponsored by Serono Symposia USA Inc The conference was meant to highlight selected novel and exciting clinical research developments related to possible therapeutic uses of recombinant human GH and IGF I GHRH GH releasing peptides and related GH secretagogues This meeting occurred only one year after a similar Serono symposium that was somewhat more oriented to novel basic science discoveries thus attesting to the current scientific and clinical interest in this area

Fear of Aging João Paulo Guimarães, 2025-02-27 In the genre of horror elderly people are often used as a trope to evoke both a fear of death and a fear of aging Old age is therefore equated with bodily mental or social decline The contributors of this book investigate what exactly we are afraid of when we posit old age as a source of horror The aim is to harness the thrills and pleasures of horror to think about how quality of life can be improved in old age and how elderly people can be better integrated in our ever fearful and suspicious societies
