Pinn, 2014-12-04 Does theism dominate the language and practices of public life in the United States? Religion, Health, and Aging Harold G. Koenig, Mona Smiley, Jo Ann Ploch Gonzales, 1988-12-14 This book presents a comprehensive and scientific review of the research during the past fifty years on the relationship between religion and health in later life. It will help professionals gain awareness of the importance of religious and spiritual variables among older people. The widespread interest in religion among today's elderly suggests its value as a coping strategy and personal resource. Unlike any other in the field, this volume synthesizes both past research and new findings, including recent unpublished data, into a model of how religion might interact with other variables to help determine adaptation to stress in later life. *Religion, Health, and Aging* provides substantial contributions to both the applied and academic aspects of religion and aging. With over 500 references, this work brings together research findings from a wide variety of disciplines and organizes them in an easily retrievable format. The introduction provides a theoretical framework and model of interactions. Subsequent chapters address the relationship between religious beliefs and attitudes and both mental and physical health. Next investigated are the impacts on health of private religious activity, community religious involvement, and personal religious experience. A model that demonstrates how religion might interact with stress and illness in later life is presented. Actual cases exemplify the role of religion in the lives of older people facing life-threatening illness. Perspectives from the disciplines of social gerontology, geriatric medicine, and the clergy are analyzed. A review is presented of the implications of research findings for professionals working with older persons. A detailed bibliography lists publications and organizations.
