Algorithmic Learning Theory Shai Ben David, John Case, Akira Maruoka, 2004-09-24 Algorithmic learning theory is mathematics about computer programs which learn from experience This involves considerable interaction between various mathematical disciplines including theory of computation statistics and combinatorics There is also considerable interaction with the practical empirical elds of machine and statistical learning in which a principal aim is to predict from past data about phenomena useful features of future data from the same phenomena The papers in this volume cover a broad range of topics of current research in the eld of algorithmic learning theory We have divided the 29 technical contributed papers in this volume into eight categories corresponding to eight sessions re ecting this broad range The categories featured are Inductive Inf ence Approximate Optimization Algorithms Online Sequence Prediction S tistical Analysis of Unlabeled Data PAC Learning Boosting Statistical pervised Learning LogicBased Learning and Query Reinforcement Learning Below we give a brief overview of the eld placing each of these topics in the general context of the eld Formal models of automated learning re ect various facets of the wide range of activities that can be viewed as learning A rst dichotomy is between viewing learning as an inde nite process and viewing it as a nite activity with a de ned termination Inductive Inference models focus on inde nite learning processes requiring only eventual success of the learner to converge to a satisfactory conclusion

Perspectives of Systems Informatics Edmund Clarke, Irina Virbitskaite, Andrei Voronkov, 2012-05-13 This book contains thoroughly refereed and revised papers from the 8th International Andrei Ershov Memorial Conference on Perspectives of System Informatics PSI 2011 held in Akademgorodok Novosibirsk Russia in June July 2011 The 18 revised full papers and 10 revised short papers presented were carefully reviewed and selected from 60 submissions The volume also contains 5 invited papers covering a range of hot topics in computer science and informatics The papers are organized in topical sections on foundations of program and system

development and analysis partial evaluation mixed computation abstract interpretation compiler construction computer models and algorithms for bioinformatics programming methodology and software engineering information technologies knowledge based systems and knowledge engineering On the Ambiguity of Erasing Morphisms Johannes C.

Schneider,2012 This book discusses a very basic and fundamental phenomenon in combinatorics on words namely the ambiguity of morphisms A morphism h is called ambiguous for a word w provided that there is another morphism g which satisfies $g(w) = h(w)$ If such another morphism does not exist h is called unambiguous for w Furthermore there are different types of restricted ambiguity which make additional demands on the other morphism g The examination of the ambiguity of morphisms is not only of intrinsic interest but due to the simplicity of the concept also shows various connections to other topics in theoretical computer science and discrete mathematics pattern languages and various other concepts as fixed points of morphisms avoidable patterns and word equations This book is the first comprehensive study of the ambiguity of erasing morphisms i.e. morphisms that are allowed to map symbols in the word to the empty word **Acceleration of**

Biomedical Image Processing with Dataflow on FPGAs Frederik Gröll, Udo Kebschull,2016-06-30 Short compute times are crucial for timely diagnostics in biomedical applications but lead to a high demand in computing for new and improved imaging techniques In this book reconfigurable computing with FPGAs is discussed as an alternative to multi core processing and graphics card accelerators Instead of adjusting the application to the hardware FPGAs allow the hardware to also be adjusted to the problem Acceleration of Biomedical Image Processing with Dataflow on FPGAs covers the transformation of image processing algorithms towards a system of deep pipelines that can be executed with very high parallelism The transformation process is discussed from initial design decisions to working implementations Two example applications from stochastic localization microscopy and electron tomography illustrate the approach further Topics discussed in the book include Reconfigurable hardware Dataflow computing Image processing Application acceleration *Algebraic Algorithms and Error-Correcting Codes* Jaques Calmet,1986-07 **Project Factorisations in Partial Evaluation** John

Launchbury,1991-10-24 This thesis covers the theory and practice behind practical evaluation It explores how programmers write programs in a highly interpretive style without paying the price in efficiency **Advances in Knowledge Discovery and Data Mining** Wee Keong Ng,Masaru Kitsuregawa,Jianzhong Li,2006-03-10 This book constitutes the refereed proceedings of the 10th Pacific Asia Conference on Knowledge Discovery and Data Mining PAKDD 2006 held in Singapore in April 2006 The 67 revised full papers and 33 revised short papers presented together with 3 invited talks were carefully reviewed and selected from 501 submissions The papers are organized in topical sections on Classification Ensemble Learning Clustering Support Vector Machines Text and Document Mining Web Mining Bio Data Mining and more

Foundations of Software Technology and Theoretical Computer Science Kesav V. Nori,1987-11-25 This volume gives the proceedings of the Tenth Conference on Foundations of Software Technology and Theoretical Computer Science

These conferences are organized and run by the computer science research community in India and their purpose is to provide a forum for professional interaction between members of this research community and their counterparts in different parts of the world The volume includes four invited papers on reasoning about linear constraints using parametric queries the parallel evaluation of classes of circuits a theory of commonsense visual reasoning natural language processing complexity theory and logic The 26 submitted papers are organized into sections on logic automata and formal languages theory of programming parallel algorithms geometric algorithms concurrency distributed computing and semantics

Information Modelling and Knowledge Bases XI Eiji Kawaguchi,Hannu Kangassalo,H. Jaakkola,2000 This is the tenth volume in a series on information modelling and knowledge bases The topics of the articles cover a wide variety of themes in the domain of information modelling design and specification of information systems and knowledge bases ranging from foundations and theories to systems construction and application studies The contributions in this volume represent the following major themes models in intelligent activity concept modelling and conceptual modelling conceptual modelling and information requirements specification collections of concepts knowledge base design and database design human computer interaction and modelling software engineering and modelling and applications *Control Flow and Data Flow: Concepts of Distributed Programming* Manfred Broy,2012-12-06 In a time of multiprocessor machines message switching networks and process control programming tasks the foundations of programming distributed systems are among the central challenges for computing scientists The foundations of distributed programming comprise all the fascinating questions of computing science the development of adequate computational conceptual and semantic models for distributed systems specification methods verification techniques transformation rules the development of suitable representations by programming languages evaluation and execution of programs describing distributed systems Being the 7th in a series of ASI Summer Schools at Marktoberdorf these lectures concentrated on distributed systems Already during the previous Summer Schools at Marktoberdorf aspects of distributed systems were important periodical topics The rising interest in distributed systems their design and implementation led to a considerable amount of research in this area This is impressively demonstrated by the broad spectrum of the topics of the papers in this volume although they are far from being comprehensive for the work done in the area of distributed systems Distributed systems are extraordinarily complex and allow many distinct viewpoints Therefore the literature on distributed systems sometimes may look rather confusing to people not working in the field Nevertheless there is no reason for resignation the Summer School was able to show considerable convergence in ideas approaches and concepts for distributed systems **Algorithmic Learning Theory II** Setsuo Arikawa,Akira Maruoka,T.
