Language Debates Various, 2021-11-25. This book captures an urgent moment for language teaching, learning, and research. At its core are a series of debates concerning gender stereotyping, the place of linguistics in modern languages, language activism, multilingualism, and modern languages and digital humanities. Taken together, these debates explore the work that languages and those who learn and speak them do in the world, as well as the way we think through and in a language and are shaped by it. *Language Debates* acknowledges the history of language teaching and the current realities of language teaching and learning. It is bold in suggesting ways forward for reform and for policy setting, languages and language learning at the heart of a consciously transformative set of goals. This book is therefore essential reading for academics, language teachers, policy makers, students, activists, and those passionate about progressing language learning and teaching. The editors and contributors make up a multilingual and multicultural team who work across languages, cultures, and borders with a globally informed approach to their work. Uniquely, the debates in this volume are based on events with participants in the Language Acts and Worldmaking Debates Series and/or workshops within the wider research project and take into account the ensuing discussions there. Each debate is accompanied by an interview which serves as a model on how to continue the conversation beyond the printed pages of the book. You can also discover ways to join the debate through links on the Language Acts and Worldmaking series website www.jmlanguages.com/languageacts, which includes recorded debates, additional materials, and more information about the series. Like all the volumes in the Language Acts and Worldmaking series, the overall aim is two-fold: to challenge widely held views about language learning as a neutral instrument of globalisation and to innovate and transform language research, teaching, and learning together with Modern Languages as an academic discipline by foregrounding its unique form of cognition and critical engagement. Specific aims are to propose new ways of bridging the gaps between those who teach and research languages and those who learn and use them in everyday contexts; from the professional to the personal, put research into the hands of wider audiences; share a philosophy, policy, and practice of language teaching and learning which turns research into action; provide the research experience and data to enable informed debates on current issues and attitudes in language learning, teaching, and research; share knowledge across and within all levels and experiences of language learning and teaching; showcase exciting new work that derives from different types of community activity and is of practical relevance to its audiences; disseminate new research in languages that engages with diverse communities of language practitioners.

Parameter Hierarchies and Universal Grammar Ian G. Roberts, 2019. In this book, Ian Roberts argues that the essential insight of the principles and parameters approach to variation can be maintained, albeit in a somewhat different guise, in the context of the minimalist

programme The book represents a significant new contribution to the formal study of cross linguistic morphosyntactic variation

Generative Linguistics Frederick J. Newmeyer, 2002-09-11 Written by one of America's most prominent linguists the essays in Generative Linguistics provide a challenging reappraisal of the Chomskian Revolution the implications of which are still being debated some three decades on Here together for the first time are all of Frederick J Newmeyer's writings on the origins and development of generative grammar Spanning a period of fifteen years the essays address the nature of the Chomskian Revolution the deep structure debates of the 1970s and the attempts to apply generative theory to second language acquisition

Rightward Movement Dorothee Beerman, David LeBlanc, Henk C. van Riemsdijk, 1997 Symmetries and asymmetries have always played an important role in linguistic theorizing From the early works on potentially universal properties of transformational processes differences between rightward and leftward movement processes were noted and constituted a challenge to theories of conditions on transformations The upward boundedness of extraposition rules vs the successive cyclic character of question word movement for example remains a vexing problem An idea which has gained considerable prominence in the most recent syntactic work in particular Noam Chomsky's Minimalist Program and Richard Kayne's Antisymmetry proposal is that rightward movement simply does not exist This means in essence that what looks like an element that has been moved rightward is either base generated in its surface position or it is actually moved leftward but all its surrounding materials have been moved leftward even further Clearly these radical proposals have generated a large number of new analyses of the relevant phenomena and they have fostered considerable controversy about the viability and desirability of this type of approach The present volume brings together a representative group of articles discussing a variety of aspects of apparent rightward movement processes including considerations having to do with parsing and representing the various opposing lines of thought on this matter Empirically they cover a wide array of constructions extraposition scrambling quantifier floating etc and languages American Sign Language Bengali Dutch French Frisian German Hindi Japanese Marathi etc
