Disaster Deferred Seth Stein, 2010-10-15 A geologist takes readers inside contemporary earthquake research to offer a

new account of the Midwest's legendary New Madrid fault an exceptional read Choice In the winter of 1811-12 a series of large earthquakes in the New Madrid seismic zone shook the Midwest These historic geological events are often incorrectly described as the biggest ever to hit the United States Today the federal government ranks the earthquake hazard in the Midwest as high as California's and is pressuring communities to undertake expensive preparations for disaster In *Disaster Deferred* geologist Seth Stein revisits these earthquakes the legends that have grown around them and the predictions of doom that have followed in their wake He details how limited scientific knowledge bureaucratic instincts and the media's love of a good story have exaggerated these hazards Debunking the hype Stein explains how contemporary seismological techniques including the use of GPS painting a very different and much less frightening picture of the future Using new geological ideas and data he calls for a more sensible less costly policy An essential book for policy makers economists and notably educators Choice

during data acquisition techniques of data processing and representation main processing routines and comparison between different techniques presentation of different typologies of graphical representation and the possibility and limitations of methods explanation of best and worst conditions of implementation of the geophysical technique in relation to the contrasts between archaeological features and the natural background and the features of the instruments and arrays The second part describes some applications of geophysical prospection to Cultural Heritage in detailed case histories divided in sections relative to monuments historical buildings urban centres archaeological parks and ancient viability Moreover examples of integration of three dimensional reliefs and geophysical diagnostic of a monuments and studies of large scale reconnaissance implemented into a Geographical Information System are treated In each case study the authors cover the description of the archaeological or historical context an explanation of the problem to solve a choice of the geophysical methods the setting of the procedure of data acquisition techniques of data processing a representation interpretation and discussion of the results
