exchange of innovative technical ideas and experiences focusing on a very important new technical discipline model driven software and systems engineering The expansion of this discipline is a direct consequence of the increasing significance and success of model based methods in practice Numerous efforts resulted in the invention of concepts languages and tools for the definition analysis transformation and verification of domain specific modeling languages and general purpose modeling language standards as well as their use for software and systems engineering MODELS 2010 the 13th edition of the conference series took place in Oslo Norway October 3-8 2010 along with numerous satellite workshops symposia and tutorials The conference was fortunate to have three prominent keynote speakers Ole Lehrmann Madsen Aarhus University Denmark Edward A Lee UC Berkeley USA and Pamela Zave AT T Laboratories USA To provide a broader forum for reporting on scientific progress as well as on experience stemming from practical applications of model based methods the 2010 conference accepted submissions in two distinct tracks Foundations and Applications The primary objective of the first track is to present new research results dedicated to advancing the state of the art of the discipline whereas the second aims to provide a realistic and verifiable picture of the current state the practice of model based engineering so that the broader community could be better informed of the capabilities and successes of this relatively young discipline This volume contains the final version of the papers accepted for presentation at the conference from both tracks

Application of Artificial Intelligence to Assessment Hong Jiao, Robert W. Lissitz, 2020-03-01 The general theme of this book is to present the applications of artificial intelligence AI in test development In particular this book includes research and successful examples of using AI technology in automated item generation automated test assembly automated scoring and computerized adaptive testing By utilizing artificial intelligence the efficiency of item development test form construction test delivery and scoring could be dramatically increased Chapters on automated item generation offer different perspectives related to generating a large number of items with controlled psychometric properties including the latest development of using machine learning methods Automated scoring is illustrated for different types of assessments such as speaking and writing from both methodological aspects and practical considerations Further automated test assembly is elaborated for the conventional linear tests from both classical test theory and item response theory perspectives Item pool design and assembly for the linear on the fly tests elaborates more complications in practice when test security is a big concern Finally several chapters focus on computerized adaptive testing CAT at either item or module levels CAT is further illustrated as an effective approach to increasing test takers engagement in testing In summary the book includes both theoretical methodological and applied research and practices that serve as the foundation for future development These chapters provide illustrations of efforts to automate the process of test development While some of these automation processes have become common practices such as automated test assembly automated scoring and computerized adaptive testing some others such as automated item generation calls for more research and exploration When new AI methods are emerging and evolving it is

expected that researchers can expand and improve the methods for automating different steps in test development to enhance the automation features and practitioners can adopt quality automation procedures to improve assessment practices

Message Length C.S. Wallace, 2005-11-20 My thanks are due to the many people who have assisted in the work reported here and in the preparation of this book The work is incomplete and this account of it rougher than it might be Such virtues as it has owe much to others the faults are all mine My work leading to this book began when David Boulton and I attempted to develop a method for intrinsic classification Given data on a sample from some population we aimed to discover whether the population should be considered to be a mixture of different types classes or species of thing and if so how many classes were present what each class looked like and which things in the sample belonged to which class I saw the problem as one of Bayesian inference but with prior probability densities replaced by discrete probabilities reflecting the precision to which the data would allow parameters to be estimated Boulton however proposed that a classification of the sample was a way of briefly encoding the data once each class was described and each thing assigned to a class the data for a thing would be partially implied by the characteristics of its class and hence require little further description After some weeks arguing our cases we decided on the maths for each approach and soon discovered they gave essentially the same results Without Boulton s insight we may never have made the connection between inference and brief encoding which is the heart of this work

Theory of Modeling and Simulation Bernard P. Zeigler, Herbert Praehofer, Tag Gon Kim, 2000-01-10 The increased computational power and software tools available to engineers have increased the use and dependence on modeling and computer simulation throughout the design process These tools have given engineers the capability of designing highly complex systems and computer architectures that were previously unthinkable Every complex design project from integrated circuits to aerospace vehicles to industrial manufacturing processes requires these new methods This book fulfills the essential need of system and control

engineers at all levels in understanding modeling and simulation This book written as a true text reference has become a standard sr graduate level course in all EE departments worldwide and all professionals in this area are required to update their skills The book provides a rigorous mathematical foundation for modeling and computer simulation It provides a comprehensive framework for modeling and simulation integrating the various simulation approaches It covers model formulation simulation model execution and the model building process with its key activities model abstraction and model simplification as well as the organization of model libraries Emphasis of the book is in particular in integrating discrete event and continuous modeling approaches as well as a new approach for discrete event simulation of continuous processes The book also discusses simulation execution on parallel and distributed machines and concepts for simulation model realization based on the High Level Architecture HLA standard of the Department of Defense Presents a working foundation necessary for compliance with High Level Architecture HLA standards Provides a comprehensive framework for continuous and discrete event modeling and simulation Explores the mathematical foundation of simulation modeling Discusses system morphisms for model abstraction and simplification Presents a new approach to discrete event simulation of continuous processes Includes parallel and distributed simulation of discrete event models Presents a concept to achieve simulator interoperability in the form of the DEVS Bus
