Fossils Rebecca Faulkner, 2016-08 This title covers the following: Where Can We Find Fossils? How Are Fossils Formed? Common Fossils? Fossil Plants and Fossil Fuels? Clues Left Behind? Become a Paleontologist. [The Monster's Bones](#) David K. Randall, 2022-06-07 A gripping narrative of a fearless paleontologist, the founding of America's most loved museums and the race to find the largest dinosaurs on record. In the dust of the Gilded Age, Bone Wars: two vastly different men emerge with a mission to fill the empty halls of New York's struggling American Museum of Natural History. Henry Fairfield Osborn, a privileged socialite whose reputation rests on the museum's success, and intrepid Kansas-born fossil hunter Barnum Brown. When Brown unearths the first Tyrannosaurus Rex fossils in the Montana wilderness, forever changing the world of paleontology, Osborn sees a path to save his museum from irrelevancy. With four-foot-long jaws capable of crushing the bones of its prey and hips that powered the animal to run at speeds of 25 miles per hour, the T-Rex suggests a prehistoric ecosystem more complex than anyone imagined. As the public turns out in droves to cower before this bone-chilling giant of the past and wonder at the mysteries of its disappearance, Brown and Osborn together turn dinosaurs from a biological oddity into a beloved part of culture. Vivid and engaging, *The Monster's Bones* journeys from prehistory to present day from remote Patagonia to the unforgiving badlands of the American West to the penthouses of Manhattan. With a wide-ranging cast of robber barons, eugenicists and opportunistic cowboys, New York Times best-selling author David K. Deadly Powers Paul A. Trout,2011-11-15 In this illuminating and evocative exploration of the origin and function of storytelling the author goes beyond the work of mythologist Joseph Campbell arguing that mythmaking evolved as a cultural survival strategy for coping

with the constant fear of being killed and eaten by predators Beginning nearly two million years ago in the Pleistocene era the first stories Trout argues functioned as alarm calls warning fellow group members about the carnivores lurking in the surroundings At the earliest period before the development of language these rudimentary stories would have been acted out When language appeared with the evolution of the ancestral human brain stories were recited memorized and much later written down as the often bone chilling myths that have survived to this day This book takes the reader through the landscape of world mythology to show how our more recent ancestors created myths that portrayed animal predators in four basic ways as monsters as gods as benefactors and as role models Each incarnation is a variation of the fear management technique that enabled early humans not only to survive but to overcome their potentially incapacitating fear of predators In the final chapter Trout explores the ways in which our visceral fear of predators is played out in the movies where both animal and human predators serve to probe and revitalize our capacity to detect and survive danger Anyone with an interest in mythology archaeology folk tales and the origins of contemporary storytelling will find this book an exciting and provocative exploration into the natural and psychological forces that shaped human culture and gave rise to storytelling and mythmaking
