Structural Sensing, Health Monitoring, and Performance Evaluation D. Huston, 2010-09-21 Structural health monitoring SHM uses one or more in situ sensing systems placed in or around a structure providing real time evaluation of its performance and ultimately preventing structural failure Although most commonly used in civil engineering such as in roads bridges and dams SHM is now finding applications in other engineering environments

Non-destructive Testing of Materials in Civil Engineering Krzysztof Schabowicz, 2019-11-19 This book was proposed and organized as a means to present recent developments in the field of nondestructive testing of materials in civil engineering For this reason the articles highlighted in this editorial relate to different aspects of nondestructive testing of different materials in civil engineering from building materials to building structures The current trend in the development of nondestructive testing of materials in civil engineering is mainly concerned with the detection of flaws and defects in concrete elements and structures

and acoustic methods predominate in this field As in medicine the trend is towards designing test equipment that allows one to obtain a picture of the inside of the tested element and materials From this point of view interesting results with significance for building practices have been obtained

Non-Destructive Evaluation of Reinforced Concrete Structures Christiane Maierhofer, Hans-Wolf Reinhardt, Gerd Dobmann, 2010-06-04 Many concrete structures and elements of concrete infrastructure have exceeded their original design lives and are deteriorating to an extent where they are becoming dangerous The deterioration can be internal or not obvious and therefore only shows up with detailed testing Non destructive evaluation of reinforced concrete structures Volume 1 Deterioration processes and standard test methods reviews the processes of deterioration and classical and standard test methods Part one discusses deterioration of reinforced concrete and testing problems with chapters on topics such as key issues in the non destructive testing of concrete structures when to use non destructive testing of reinforced concrete structures deterioration processes in reinforced concrete modelling ageing and corrosion processes in reinforced concrete structures components in concrete and their impact on quality and predicting the service life of reinforced concrete structures Part two reviews classical and standard testing methods including microscopic examination of deteriorated concrete the analysis of solid components and their ratios in reinforced concrete structures the determination of chlorides in concrete structures and investigating the original water content of reinforced concrete structures With its distinguished editors and international team of contributors Non destructive evaluation of reinforced concrete structures Volume 1 Deterioration processes and standard test methods will be a standard reference for civil and structural engineers as well as those concerned with making decisions regarding the safety of reinforced concrete structures Provides a comprehensive discussion from examination of the components in concrete and their affect on quality through to the role of and tools required for lifetime management Experts in the field identify the testing problems associated with infrastructure considering design build and maintenance stages Presents a guide for when to use non destructive testing of reinforced concrete structures including the role of time in testing
