Logan, 2013-03-20 Early in the twentieth century arguments about nature and nurture pitted a rigid genetic determinism against the idea that genes were flexible and open to environmental change This book tells the story of three Viennese biologists Paul Kammerer Julius Tandler and Eugen Steinach who sought to show how the environment could shape heredity through the impact of hormones It also explores the dynamic of failure through both scientific and social lenses During World War I the three men were well respected scientists by 1934 one was dead by his own hand another was in exile and the third was subject to ridicule Paul Kammerer had spent years gathering zoological evidence on whether environmental change could alter heredity using his research as the scientific foundation for a new kind of eugenics one that challenged the racism growing in mainstream eugenics By 1918 he drew on the pioneering research of two colleagues who studied how secretions shaped sexual attributes to argue that hormones could alter genes After 1920 Julius Tandler employed a similar concept to restore the health and well being of Vienna s war weary citizens Both men rejected the rigidly acting genes of the new genetics and instead crafted a biology of flexible heredity to justify eugenic reforms that respected human rights But the interplay of science and personality with the social and political rise of fascism and with antisemitism undermined their ideas leading to their spectacular failure Ethics in the Real World Peter Singer, 2017-09-05 Provocative essays on real world ethical questions from the world s most influential philosopher Peter Singer is often described as the world s most influential philosopher He is also one of its most controversial The author of important books such as Animal Liberation Practical Ethics Rethinking Life and Death and The Life You Can Save he helped launch the animal rights and effective altruism movements and contributed to the development of bioethics Now in Ethics in the Real World Singer shows that he is also a master at dissecting important current events in a few hundred words In this book of brief essays he applies his controversial ways of thinking to issues like climate change extreme poverty animals abortion euthanasia human genetic selection sports doping the sale of kidneys the ethics of high priced art and ways of increasing happiness Singer asks whether chimpanzees are people smoking should be outlawed or consensual sex between adult siblings should be decriminalized and he reiterates his case against the idea that all human life is sacred applying his arguments to some recent cases in the news In addition he explores in an easily accessible form some of the deepest philosophical questions such as whether anything really matters and what is the value of the pale blue dot that is our planet The collection also includes some more personal reflections like Singer s thoughts on one of his favorite activities surfing and an unusual suggestion for starting a family conversation over a holiday feast Now with a new afterword by the author this provocative and original book will challenge and possibly change your beliefs about many real world ethical questions
