Quadratic Programming and Affine Variational Inequalities Gue Myung Lee,N.N. Tam,Nguyen Dong Yen,2005-02-23 This book develops a unified theory on qualitative aspects of nonconvex quadratic programming and affine variational inequalities One special feature of the book is that when a certain property of a characteristic map or function is investigated the authors always try first to establish necessary conditions for it to hold then they go on to study whether the obtained necessary conditions are also sufficient ones This helps to clarify the structures of the two classes of problems under consideration The qualitative results can be used for dealing with algorithms and applications related to quadratic programming problems and affine variational inequalities

Quadratic Programming and Affine Variational Inequalities Gue Myung Lee,N.N. Tam,Nguyen Dong Yen,2006-03-30 Quadratic programs and affine variational inequalities represent two fundamental closely related classes of problems in the theories of mathematical programming and variational inequalities respectively This book develops a unified theory on qualitative aspects of nonconvex quadratic programming and affine variational inequalities The first seven chapters introduce the reader step by step to the central issues concerning a quadratic program or an affine variational inequality such as the solution existence necessary and sufficient conditions for a point to belong to the solution set and properties of the solution set The subsequent two chapters discuss briefly two concrete models linear fractional vector optimization and the traffic equilibrium problem whose analysis can benefit a lot from using the results on quadratic programs and affine variational inequalities There are six chapters devoted to the study of continuity and or differentiability properties of the characteristic maps and functions in quadratic programs and in affine variational inequalities where all the components of the problem data are subject to perturbation Quadratic programs and affine variational inequalities under linear perturbations are studied in three other chapters One special feature of the presentation is that when a certain property of a characteristic map or function is investigated we always try first to establish necessary conditions for it to hold then we go on to study whether the obtained necessary conditions are sufficient ones This helps to clarify the structures of the two classes of problems under consideration

Nostradamus 2014: Prediction, Modeling and Analysis of Complex Systems Ivan Zelinka,Ponnuthurai Nagaratnam Suganthan,Guanrong Chen,Vaclav Snasel,Ajith Abraham,Otto Rössler,2014-06-09 The prediction of behavior of complex systems analysis and modeling of its structure is a vitally important problem in engineering economy and generally in science today Examples of such systems can be seen in

the world around us including our bodies and of course in almost every scientific discipline including such exotic domains as the earth's atmosphere, turbulent fluids, economics, exchange rate and stock markets, population growth, physics, control of plasma, information flow in social networks and its dynamics, chemistry and complex networks. To understand such complex dynamics which often exhibit strange behavior and to use it in research or industrial applications it is paramount to create its models. For this purpose there exists a rich spectrum of methods from classical such as ARMA models or Box-Jenkins method to modern ones like evolutionary computation, neural networks, fuzzy logic, geometry, deterministic chaos amongst others. This proceedings book is a collection of accepted papers of the Nostradamus conference that has been held in Ostrava, Czech Republic in June 2014. This book also includes outstanding keynote lectures by distinguished guest speakers Ren Lozi (France), Ponnuthurai Nagarathnam Suganthan (Singapore) and Lars Nolle (Germany). The main aim of the conference was to create a periodical possibility for students, academics and researchers to exchange their ideas and novel research methods. This conference establishes a forum for presentation and discussion of recent research trends in the area of applications of various predictive methods.
