Quality Of Fresh And Processed Foods:

Quality of Fresh and Processed Foods Fereidoon Shahidi, Arthur M. Spanier, Chi-Tang Ho, Terry Braggins, 2003-12-31
Quality is a composite term encompassing many characteristics of foods. These include color, aroma, texture, general nutrition, shelf life, stability, and possible presence of undesirable constituents. Obviously, deterioration of quality may lead to changes in the attributes that characterize the food in its fresh or freshly processed state. In addition, quality enhancement of products may be carried out using appropriate processing techniques. Interaction of different components present with one another could have a profound effect on sensory quality of products. Meanwhile, presence of extraneous matter such as pesticides and debris may also contribute to a compromise in the quality of foods. In addition, processing often brings about changes in many attributes of food, including its nutritional value. Thus, examination of process-induced changes in food products is important. In this book, a cursory account of quality attributes of fresh and processed foods is provided. The book is of interest to food scientists, nutritionists, and biochemists in academia, government, and industry. *Quality of Fresh and Processed Foods* Fereidoon Shahidi, Arthur M. Fresh & Processed Food from Israel Israel. Ha'ivat ha-mazon, 1976 **Minimally Processed Foods** Mohammed Wasim Siddiqui, Mohammad Shafiur Rahman, 2014-10-29
The safety and efficacy of minimal food processing depends on the use of novel preservation technologies. This book first examines what is meant by minimally processed foods, including fresh cut, cooked, chilled, and part-baked products. Next explored are the technologies or methods to produce quality products in terms of safety and nutrition, including edible coating, natural preservatives, i.e. antimicrobial, flavour enhancer, anti-browning, advanced packaging, active antimicrobial, and modified or controlled atmosphere, and selected non-thermal techniques: high pressure, pulsed electric field, ultrasound, light. Preservation of food is crucial to achieving a secure and safe global food supply with the desired sensory quality. In addition, the increasing consumer demand for safe, ready-to-serve, ready-to-eat, and cook products with minimal chemical preservatives has raised expectations. However, foods deemed minimally processed, such as

fresh cut fruits and vegetables cooked chilled and half baked foods are delicate products that need special care in preparation processing storage and handling As a result new technologies to develop minimally processed foods have aggressively advanced Minimally Processed Foods Technologies for Safety Quality and Convenience explores both the definition of minimally processed foods and the methods and technologies used to achieve the safety and nutritional value consumers demand About the Editors Mohammed Wasim Siddiqui Bihar Agricultural University Sabour Bhagalpur India Mohammad Shafiur Rahman Sultan Qaboos University Al khod Oman

Analysis of Nonalcoholic Beverages Hans-Ferdinand Linskens,John F. Jackson,2012-12-06 Modern Methods of Plant Analysis When the handbook Modern Methods of Plant Analysis was first introduced in 1954 the considerations were 1 the dependence of scientific progress in biology on the improvement of existing and the introduction of new methods 2 the difficulty in finding many new analytical methods in specialized journals which are normally not accessible to experimental plant biologists 3 the fact that in the methods sections of papers the description of methods is frequently so compact or even sometimes so incomplete that it is difficult to reproduce experiments These considerations still stand today The series was highly successful seven volumes appearing between 1956 and 1964 Since there is still today a demand for the old series the publisher has decided to resume publication of Modern Methods of Plant Analysis It is hoped that the New Series will be just as acceptable to those working in plant sciences and related fields as the early volumes undoubtedly were It is difficult to single out the major reasons for success of any publication but we believe that the methods published in the first series were

up to date at the time and presented in a way that made description as applied to plant material complete in itself with little need to consult other publications Contributing authors have attempted to follow these guidelines in this New Series of volumes
