Quantifying Human Information Processing Dennis K. McBride, Dylan Schmorrow, 2005-01-01 Rapid advances in IT that allow complex information to be presented in high volume and density are challenging human ability to absorb and analyze data as never before Designing technologies and systems to provide optimal sensory information to human users will be increasingly important But to do this quantitative relationships between brain behavior at a molecular level and observable human behavior must be better identified This was previously considered to be a futuristic and somewhat unrealistic goal however recent advances in cognitive neuroscience have provided new opportunities for researchers Refinements in imaging technology and simulation tools and the learning yielded from them provided the Quantifying Human Information Processing QHIP research teams strong starting points from which to further assess the ability to quantify human information processing Led by experts in psychology cognitive science and information processing among other fields researchers sought to quantify the information flow in the nervous system the limits of that flow and how it is affected by emotions The QHIP effort looked at specific aspects of the brain s information processing ability including measuring task related and unrelated thought assessing mental workload and finding optimal information processing The researchers found important indicators of both the capacity and limits of the human brain and offer new ways to think about the brain This work is a valuable contribution to the fields of psychology neuroscience and cognition and will serve as a resource for human factors engineers designing the next generation of information safety analysis and control systems because it starts to answer how to maximize information processing without overloading the central nervous system **Quantifying Human**

Resources Clotilde Coron, 2020-04-09 Since the late 20th Century Human Resources HR has had a legal obligation to produce reports for management in most firms However these have long been considered restrictive and are seldom used to improve decision making More recently the emergence of analytics Big Data and algorithms has enabled a reconfiguration of the uses of quantification in HR Accompanied by empirical examples this book presents and defines the different tools and uses of quantification in HR It studies the effect of these tools on decision making and without subscribing to the myth of objective and rational quantification presents the contributions and limits of the use of data in HR and analyzes the potential risks of excessive quantification It also discusses the appropriation of these tools by the various players in a company and examines their effects on the position of HR **Human Computer Interaction Handbook** Julie A.
