Quantitative Techniques for Management S. Jaisankar, 2009. This book has been developed with a focus on the need to demystify the subject and make it easy for students to grasp the principles and details involved and make it easily understandable to beginners exposed to the subject for the first time. An attempt has been made to explain things in a logical progression in the simplest possible way so that neophytes may quickly grasp the concepts and methodology. A novel approach in the book is the illustrative use of computers with TORA package as a problem solving tool. In actual practice situations arise with large and complex problems that are difficult to solve. At such times using computers to solve problems gives fast and more accurate results. The chapters are arranged so as to progressively explain the workings of various models in actual practice through step by step procedures that so simplify and solve them that even students from a non mathematics academic background will grasp them quickly. Linear programming the most powerful tool for managerial decision making is covered elaborately including thorough discussion of various LP methods and LP solutions. Duality in LP problems, sensitivity analysis etc. Models in the book also use Linear Programming to reach solutions including those relating to transportation and transshipment, assignment and Game Theory illustrated with screen shots of a computer with a TORA package. Readers whether students, business executives, managers, researchers and academicians will find that the insights and knowledge obtained from the book will stand them in good stead in both academic as well as occupational pursuits.
