Tillapaugh, Brian L. McGowan, 2023-07-03 There continues to be much concern about the retention and persistence of men in college particularly Black Latinx and Native American men In addition queer and trans men also have found institutions to be problematic spaces For those who do persist we know that men are overrepresented in student conduct cases and engage in risky behaviors around alcohol drug use and sexual relationships Additionally we know that college men have historically avoided engaging in help seeking behaviors for their academic and personal success This book addresses the ways that theory can be put into practice for powerful transformative learning to support college men and their development This book synthesizes the research of the past three decades on college men to inform college student educators on the developmental needs of college men and illuminates how young men are socialized prior to their arrival to campus but perhaps more importantly how the collegiate environment becomes a training ground for the socialization of masculinities by students their peers and their environments Beyond that it sets out how practitioners can help young men understand why and how they have been socialized around their gender identity but also what their gender identity and sense of masculinity means for their future selves The book highlights programs and services designed to have college men engage with and dialogue around issues of hegemonic toxic or unhealthy aspects of masculinity These promising practices can offer college men opportunities to understand their power privilege and identity in ways that can be affirming and healthier leading to more life giving chances This is all the more important in the context of an ever evolving society where traditionally held norms and expectations around gender particularly masculinities are shifting This book equips student affairs staff faculty and administrators to better support college men's development It offers readers insights ideas and models for adapting and developing programs services and initiatives that may meaningfully meet the needs of specific student populations while recognizing that there is no one size fits all approach to this work *The Myth of the Poor Man's Atomic Bomb and the Politics of Proliferation* Biejan Poor Toulabi, 2021-04-07 Preventing the spread of weapons of mass destruction has been an

important policy priority in the past decades This dissertation questions the prevailing view that chemical and biological weapons CBWs are a poor man's atomic bomb that are particularly attractive to developing countries that cannot acquire nuclear weapons The study shows that vague unverifiable and inflated threat assessments from US government sources have played an important role in sustaining this myth A unique dataset of CBW development programs in the period 1946 2010 demonstrates that significantly fewer countries have had CBW programs than often thought and that especially Third World

countries have been incorrectly accused of pursuing or possessing CBWs

Lees' Loss Prevention in the Process

Industries Frank Lees, 2005-01-10 Over the last three decades the process industries have grown very rapidly with corresponding increases in the quantities of hazardous materials in process storage or transport. Plants have become larger and are often situated in or close to densely populated areas. Increased hazard of loss of life or property is continually highlighted with incidents such as Flixborough, Bhopal, Chernobyl, Three Mile Island, the Phillips 66 incident and Piper Alpha to name but a few. The field of Loss Prevention is and continues to be of supreme importance to countless companies, municipalities and governments around the world because of the trend for processing plants to become larger and often be situated in or close to densely populated areas thus increasing the hazard of loss of life or property. This book is a detailed guidebook to defending against these and many other hazards. It could without exaggeration be referred to as the bible for the process industries. This is THE standard reference work for chemical and process engineering safety professionals. For years it has been the most complete collection of information on the theory, practice, design, elements, equipment, regulations and laws covering the field of process safety. An entire library of alternative books and cross referencing systems would be needed to replace or improve upon it, but everything of importance to safety professionals, engineers and managers can be found in this all encompassing reference. Instead, Frank Lees' world renowned work has been fully revised and expanded by a team of leading chemical and process engineers working under the guidance of one of the world's chief experts in this field. Sam Mannan is professor of chemical engineering at Texas A&M. Principles, practice, codes, standards, data and references needed by those practicing in the field.

Human Performance Modeling in Aviation David C. Foyle, Becky L. Hooey, 2007-12-07

Based on the research activities of the six year NASA human performance modeling project, *Human Performance Modeling in Aviation* provides an in depth look at cognitive modeling of human operators for aviation problems. This book presents specific solutions to aviation safety problems and explores methods for integrating human performance modeling into the aviation design process. The text compares the application of five different models to two classes of aviation problems: pilot navigation errors during airport taxi operations and approach and landing performance with synthetic vision systems. This results in a comprehensive summary of the capabilities of each model and of the field in general.
