Quantitative characterization and engineering application of pores and
fractures of different scales in unconventional reservoirs, volume III

1 Introduction

Unconventional oil and gas resources have emerged as a pivotal area in the global petroleum industry, representing a significant shift from conventional hydrocarbon exploration and production. These unconventional resources, which encompass reservoirs like shale, tight sandstones, tight carbonates, and volcanic rocks, pose distinct challenges due to their intricate pore-fracture systems and the unconventional mechanisms governing fluid flow and accumulation (Gao and Li, 2016; Li et al., 2019; Li et al., 2020; Radwan et al., 2021; Li, 2023). Notably, each type of unconventional reservoir exhibits unique characteristics, necessitating a comprehensive and precise quantification of their pore and fracture attributes. This quantification is pivotal to advancing the exploration and production strategies for unconventional oil and gas reservoirs.

In recent years, there has been a remarkable surge in technological advancements and their practical application in reservoir characterization. These innovations span various disciplines, including high-resolution CT scanning, nuclear magnetic resonance (NMR), field-emission scanning electron microscopy (FE-SEM), atomic force microscopy (AFM), and gas adsorption techniques (Fan et al., 2020a; Li et al., 2022a; Li, 2022; Zhu et al., 2023). These cutting-edge technologies have collectively enabled researchers and industry professionals to undertake quantitative assessments of the intricate three-dimensional pore structures and the behavior of mobile fluids within tight reservoirs.

High Performance Computing Philippe Navaux, Carlos J. Barrios H., Carla Osthoff, Ginés Guerrero, 2022-12-20 This book constitutes the proceedings of the 9th Latin American Conference on High Performance Computing CARLA 2022 held in Porto Alegre Brazil in September 2022 The 16 full papers presented in this volume were carefully reviewed and selected from 56 submissions CARLA the Latin American High Performance Computing Conference is an international academic meeting aimed at providing a forum to foster the growth and strength of the High Performance Computing HPC community in Latin America and the Caribbean through the exchange and dissemination of new ideas techniques and research in HPC and its application areas Fundamentals of Performance Evaluation of Computer and Telecommunication Systems

Mohammed S. Obaidat, Nouredine A. Boudriga, 2010-01-26 The only singular all encompassing textbook on state of the art technical performance evaluation Fundamentals of Performance Evaluation of Computer and Telecommunication Systems uniquely presents all techniques of performance evaluation of computers systems communication networks and telecommunications in a balanced manner Written by the renowned Professor Mohammad S Obaidat and his coauthor Professor Nouredine Boudriga it is also the only resource to treat computer and telecommunication systems as inseparable issues The authors explain the basic concepts of performance evaluation applications performance evaluation metrics workload types benchmarking and characterization of workload This is followed by a review of the basics of probability theory and then the main techniques for performance evaluation namely measurement simulation and analytic modeling with case studies and examples Contains the practical and applicable knowledge necessary for a successful performance evaluation in a balanced approach Reviews measurement tools benchmark programs design of experiments traffic models basics of queueing theory and operational and mean value analysis Covers the techniques for validation and verification of simulation as well as random number generation random variate generation and testing with examples Features numerous examples and case studies as well as exercises and problems for use as homework or programming assignments Fundamentals of Performance Evaluation of Computer and Telecommunication Systems is an ideal textbook for graduate students in computer science electrical engineering computer engineering and information sciences technology and systems It is also an excellent reference for practicing engineers and scientists **Thin film transistors. 1. Amorphous silicon**

thin film transistors Yue Kuo, 2004 This is the first reference on amorphous silicon and polycrystalline silicon thin film transistors that gives a systematic global review of all major topics in the field These volumes include sections on basic materials and substrates properties fundamental device physics critical fabrication processes structures a Si H dielectric metallization catalytic CVD and existing and new applications The chapters are written by leading researchers who have extensive experience with reputed track records Thin Film Transistors provides practical information on preparing individual functional a Si H TFTs and poly Si TFTs as well as large area TFT arrays Also covered are basic theories on the a Si H TFT

operations and unique material characteristics Readers are also exposed to a wide range of existing and new applications in industries
