Abstract

Expenses are costs of the firm, and as such they represent an investment. Because such investment requires a commitment of funds, therefore a firm has to maintain inventory at the current level. If they become too large, the firm loses the opportunity to employ those funds more effectively. Similarly, if they are too small, the firm may face sales. Thus, there is an optimal level of inventory. The EOQ is a model that is used to calculate the optimal quantity that can be purchased to minimize the costs of both the carrying inventory and the processing of purchase orders.

Keywords: Economic order quantity, Inventory management, Inventory control

Introduction

This model is known as economic order quantity (EOQ) model, because it establishes the most economic size of order to place. It is one of the oldest classical production scheduling models. In 1913, Ford W. Harris developed this formula whereas R. H. Wilson is given credit for the application and in-depth analysis on this model. By using this model, the companies can minimize the costs associated with the ordering and inventory holding. It can be a valuable tool for small business owners who need to make decisions about how much inventory to keep on hand, how many items to order each time, and how often to reorder to meet the lowest possible costs. There are four most important categories of inventory costs are ordering costs and carrying costs.

Ordering costs

It is the costs that are incurred in obtaining additional inventory. These include costs incurred in communicating the order, travelling allowance and duty allowance to purchase officers, printing and stationery, salary of purchase department, cost of inspection, cost of receiving the material, transportation cost per unit, other cost, rather than transport costs between warehouse and order irrespective of the order size.

foreign direct investment FDI Analysing the subject not only along theoretical lines and from the perspective of IPAs and governments but also through the eyes of practitioners and corporate investors it charts a more holistic picture of the FDI decision making process and its subsequent implementation An in depth analysis of national and regional IPA structures and investment promotion practises provides the reader with a broad understanding of state of the art investment promotion By adding the corporate managers perspective the reader gets a first hand impression of how widely known IPAs are in the corporate world which IPA services are sought after and which are considered less useful For corporate managers FDI projects are complex and often risky and to understand their expectations towards IPAs should further the current policy debate Given the significant sums of money spent each year on FDI incentives and given that the fortunes of nation states can be turned around on FDI as Ireland and Singapore have conclusively demonstrated a more grounded analysis of investment policies and promotion strategies is increasingly taking centre stage in policy debate The book fills a gap by providing operationally useful answers to corporate managers and thereby also furthering our understanding of FDI decision making which in turn allows governments to align their policy offerings This book is therefore a useful resource for students and researchers of international economics and business and political economy as well as policymakers Investment Promotion officials and corporate managers engaged in FDI projects
