Quantum Linear Groups:

Quantum Linear Groups Brian Parshall, Jian-pan Wang, 1991 We consider the theory of quantum groups as a natural abstraction of the theory of affine group schemes After establishing the foundational results as the theory of induced representations rational cohomology and the Hochschild Serre spectral sequence we take up a detailed investigation of the quantum linear group $GL_n(\mathbb{F}_q)$ In particular we develop the global and infinitesimal representation theory of $GL_n(\mathbb{F}_q)$ and its subgroups

Quantum Linear Groups and Representations of $GL_n(\mathbb{F}_q)$ Jonathan Brundan, Richard Dipper, Aleksandr Sergeevich Kleshchëv, 2001 We give a self contained account of the results originating in the work of James and the second author in the 1980s relating the representation theory of $GL_n(\mathbb{F}_q)$ over fields of characteristic coprime to q to the representation theory of quantum GL_n at roots of unity The new treatment allows us to extend the theory in several directions First we prove a precise functorial connection between the operations of tensor product in quantum GL_n and Harish Chandra induction in finite GL_n This allows us to obtain a version of the recent Morita theorem of Cline Parshall and Scott valid in addition for p singular classes From that we obtain simplified treatments of various basic known facts such as the computation of decomposition numbers and blocks of $GL_n(\mathbb{F}_q)$ from knowledge of the same for the quantum group and the non defining analogue of Steinberg's tensor product theorem We also easily obtain a new double centralizer property between $GL_n(\mathbb{F}_q)$ and quantum GL_n generalizing a result of Takeuchi Finally we apply the theory to study the affine general linear group following ideas of Zelevinsky in characteristic zero We prove results that can be regarded as the modular analogues of Zelevinsky's and Thoma's branching rules Using these we obtain a new dimension formula for the irreducible cross characteristic representations of $GL_n(\mathbb{F}_q)$ expressing their dimensions in terms of the characters of irreducible modules over the quantum group

Representation Theory of Finite Groups and Finite-Dimensional Algebras Michler, Ringel, 2012-12-06 From April 1 1984 until March 31 1991 the Deutsche Forschungsgemeinschaft has sponsored the project Representation Theory of Finite Groups and Finite Dimensional Algebras The proposal for this project was submitted by B Huppert Mainz B Fischer Bielefeld G Michler Essen H Pahlings Aachen and C M Ringel Bielefeld in order to strengthen the interaction between the different research areas in representation theory The Deutsche Forschungsgemeinschaft has given many research positions and fellowships for young algebraists enabling them to do research at their own universities or as visitors at well known research institutions in America Australia England and France The whole project benefitted very much from an extensive exchange programme between German and American scientists sponsored by the Deutsche Forschungsgemeinschaft and by the National Science Foundation of the United States This volume presents lectures given in a final conference and reports by members of the project It is divided into two parts The first part contains seven survey articles describing recent advances in different areas of representation theory These articles do not only concentrate on the work done by the German research groups but also inform on major developments of the subject at all The volume omits those topics already treated in book form In particular it does not contain a survey on K
