Ninth Marcel Grossman Meeting (MGIXMM) Robert T. Jantzen, Remo Ruffini, Vahe G. Gurzadyan, 2002-12-01 In 1975 the
Marcel Grossmann Meetings were established by Remo Ruffini and Abdus Salam to provide a forum for discussion of recent
advances in gravitation general relativity and relativistic field theories In these meetings which are held once every three
years every aspect of research is emphasized mathematical foundations physical predictions and numerical and experimental
investigations The major objective of these meetings is to facilitate exchange among scientists so as to deepen our
understanding of the structure of space time and to review the status of both the ground based and the space based
experiments aimed at testing the theory of gravitation The Marcel Grossmann Meetings have grown under the guidance of an
International Organizing Committee and a large International Coordinating Committee The first two meetings MG1 and MG2
were held in Trieste 1975 1979 A most memorable MG3 1982 was held in Shanghai and represented the first truly
international scientific meeting in China after the so called Cultural Revolution Three years later MG4 was held in Rome
1985 It was at MG4 that astroparticle physics was born MGIXMM was organized by the International Organizing Committee
composed of D Blair Y Choquet Bruhat D Christodoulou T Damour J Ehlers F Everitt Fang Li Zhi S Hawking Y Ne eman R
Ruffini chair H Sato R Sunyaev and S Weinberg Essential to the organization was an International Coordinating Committee of
135 members from scientific institutions of 54 countries MGIXMM was attended by 997 scientists of 69 nationalities It took
place on 28 July 2000 at the University of Rome Italy The scientific programs included 60 plenary and review talks as well as
talks in 88 parallel sessions The three volumes of the proceedings of MGIXMM present a rather authoritative view of
relativistic astrophysics which is becoming one of the priorities in scientific endeavour The papers appearing in these
volumes cover all aspects of gravitation from mathematical issues to recent observations and experiments Their intention is
to give a complete picture of our current understanding of gravitational theory at the turn of the millennium The Marcel
Grossmann Individual Awards for this meeting were presented to Cecile and Bryce DeWitt Riccardo Giacconi and Roger
Penrose while the Institutional Award went to the Solvay Institute accepted on behalf of the Institute by Jacques Solvay and
Ilya Prigogine The acceptance speeches are also included in the proceedings Semiclassical and Stochastic Gravity
Bei-Lok B. Hu, Enric Verdaguer, 2020-03-05 The two pillars of modern physics are general relativity and quantum field theory

the former describes the large scale structure and dynamics of space time the latter the microscopic constituents of matter Combining the two yields quantum field theory in curved space time which is needed to understand quantum field processes in the early universe and black holes such as the well known Hawking effect This book examines the effects of quantum field processes back reacting on the background space time which become important near the Planck time 10^{-43} sec It explores the self consistent description of both space time and matter via the semiclassical Einstein equation of semiclassical gravity theory exemplified by the inflationary cosmology and fluctuations of quantum fields which underpin stochastic gravity necessary for the description of metric fluctuations space time foams Covering over four decades of thematic development this book is a valuable resource for researchers interested in quantum field theory gravitation and cosmology
